Science Tracks 8:

Proceedings of the 8th International Conference on Business, Economics, Social Sciences, and Humanities - Humanities and Social Sciences Track (ICOBEST-HSS 2025) Lia Warlina, Senny Luckyardi, 2025-08-03

This is an open access book. The 8th International Conference on Business Economics Social Sciences and Humanities ICOBEST hosted by Universitas Komputer Indonesia UNIKOM will be held on May 15 2025. With the theme Sustainable Progress Through Innovation and Inclusivity in the Digital Era the conference will explore how digital advancements can drive sustainable growth while addressing global challenges. It emphasizes collaboration equity and innovation to build a more inclusive and resilient future. ICOBEST 2025 invites scholars researchers and professionals to share knowledge present research and exchange ideas on emerging trends and challenges in business economics social sciences and humanities. Join us to connect and shape solutions for a thriving sustainable world.

Fractals in the Earth Sciences C.C. Barton, P.R. La Pointe, 2013-06-29. Fractals have changed the way we understand and study nature. This change has been brought about mainly by the work of B.B. Mandelbrot and his book *The Fractal Geometry of Nature*. Now here is a book that collects articles treating fractals in the earth sciences. The themes chosen span as is appropriate for a discourse on fractals many orders of magnitude including earthquakes ocean floor topography fractures faults mineral crystallinity gold and silver deposition. There are also chapters on dynamical processes that are fractal such as rivers earthquakes and a paper on self organized criticality. Many of the chapters discuss how to estimate fractal dimensions Hurst exponents and other scaling exponents. This book in a way represents a snapshot of a field in which fractals has brought inspiration and a fresh look at familiar subjects. New ideas and attempts to quantify the world we see around us are found throughout. Many of these ideas will grow and inspire further work others will be superseded by new observations and insights most probably with future contributions by the authors of these chapters.

Radon Measurements By Etched Track Detectors - Applications In Radiation Protection, Earth Sciences Saeed A Durrani, Radomir Ilic, 1997-06-09. Exposure to radon gas which is present in the environment naturally constitutes over half the radiation dose received by the general public annually. At present the most widely used method of measuring radon concentration levels throughout the world both in dwellings and in the field is by etched track detectors also known as Solid State Nuclear Detectors SSNTDs. Although this is not only the most widely used method but is also the simplest and the cheapest yet there is at present no book available on the market globally devoted exclusively or largely to the methodology of and dealing with the results obtained by the SSNTD technique. The present book fills this important gap in the coverage of radon measurements. Individual chapters of the book are contributed by some of the most prominent and active research workers in the world in the SSNTD discipline as well as in the field of radon measurements. A detailed breakdown of the contents of the book is shown below together with the names of the

author s of each chapter **IMDC-IST 2021** Abd-Alhameed Raed,A.
