The Criminal Personality Samuel Yochelson, Stanton Samenow, 2000-04-01 The third in a series explicating the criminal mind this volume summarizes observations interpretations and conclusions derived from a study of 121 criminal men who used drugs and or alcohol to excess Originally set in writing by Yochelson before his death in 1976 the materials were edited and updated by Samenow for publication Systematic probing and repeated interviews were used as the vehicle for gathering information on common mental themes among men apprehended and sentenced for criminal acts Yochelson and Samenow attribute crime to a series of early irresponsible choices that predate drug use among drug using criminals Personality and personal choice variables are conceptualized as critical in initialing and maintaining use In what is called an indiscriminate search for excitement drug using criminals are characterized as expanding their criminal repertoire while excusing their actions by rationalizations sometimes invented by sociologists psychologists and psychiatrists Although these ideas are of considerable interest the real value of the text lies in its intriguing presentation of drug user thinking Specifically three chapters are well worth reading The description of mental activities associated with such constructs as the high the nod and the rush are probably on target for many drug users whether criminal or not The chapter explaining drugs as facilitators offers several notions worthy of systematic inquiry as does the one devoted to principles for encouragement of behavior change Of perhaps greatest benefit to most readers are caveats regarding management of drug users in what may be seen as a cognitive behavioral framework Yochelson and Samenow contend that drug using criminal men represent the architects of their criminal life styles and that it is they themselves who can correct irresponsible thoughts and behaviors through application of logic over emotion

Maisto, 2013-06-29 With the recent increase in the scope of drug and alcohol problems has come an awareness of the need for solutions In this context federal support for research on drug problems increased tremendously during the last 10 to 15 years with the establishment of the National Institute on Drug Abuse NIDA and the National Institute on Alcohol Abuse and Alcoholism NIAAA Funding from these and other sources has led to a substantial increase in the quantity and quality of published work related to substance abuse As data accumulate it is becoming more apparent that substance abuse problems are extremely complex and are influenced by a variety of biological psychological and environmental variables Unfortunately it has proved difficult to go beyond this conclusion to a description of how these multiple factors work together to influence the development of and recovery from drug and alcohol dependence The purpose of this book is to try to meet that objective by including in one volume literature reviews and theoretical analyses from a wide variety of drug researchers We chose the authors in an attempt to assure that each of the various levels of analysis appropriate to the substance abuse problems would be included In each case the author was asked to consider how the variables in his or her particular domain might contribute to the appearance of individual differences in both alcohol and drug problems *Drugs in America* Ansley Hamid, 1998 This basic analysis of the drug problem in America describes the historical and present use of mood altering drugs the economics of drug trafficking theories of addiction and the resulting crime violence and community deterioration In addition the author focuses on the effects of legalizing drugs and the role of law enforcement This is an ideal text for any course discussing drug use and abuse Marijuana decriminalization United States. Decriminalization of Marijuana United States. Congress. House. Select Committee on Narcotics Abuse and Control, 1977 **Addiction Treatment** Daniel Hood, 2017-09-08 Addiction Treatment is an ethnography that compares two types of residential drug free treatment programs religious faith based programs and science based secular programs Although these programs have originated from significantly different ideological bases in examining the day to day operations of each Daniel E Hood concludes that they are far more alike than they are different Drug free treatment today whether in secular or religious form is little more than a remnant of the temperance movement It is a warning to stop using drugs At its best treatment provides practical advice and support for complete abstinence At its worst it demeans users for a form of behavior that is not well understood and threatens death if they do not stop Hood argues that there is no universal agreement on what addiction is and that drug abuse is little more than a catch all term of no specific meaning used to condemn behavior that is socially unacceptable Through extensive participatory observations intimate life history interviews and informal conversations with residents and staff Hood shows how both programs use the same basic techniques of ideological persuasion mutual witnessing methods of social control discourse deprivation and the same proposed zero

Pursuit of Ecstasy Jerome Beck, Marsha Rosenbaum, 1994-03-08 The authors have produced the first on the ground study not just clinical or chemical of MDMA 3,4-methylenedioxymethamphetamine or ecstasy as it is frequently designated. A psychoactive substance related to both the amphetamines and mescaline. MDMA has become popular in recent years as one of the new designer drugs. First used in therapeutic treatment, its recreational or street use has increased in recent years. The authors track the efforts with psychiatrists and researchers in opposition of the DEA to ban the drug.

Mad Science Stuart A. Kirk, 2017-07-05 Winner of an honorable mention from the Society for Social Work and Research for Outstanding Social Work Book Award. Mad Science argues that the fundamental claims of modern American psychiatry are based on misconceived, flawed, and distorted science. The authors address multiple paradoxes in American mental health research, including the remaking of coercion into scientific psychiatric treatment, the adoption of an unscientific diagnostic system that controls the distribution of services, and how drug treatments have failed to improve the mental health outcome. When it comes to understanding and treating mental illness, distortions of research are not rare; misinterpretation of data is not isolated, and bogus claims of success are not voiced by isolated researchers seeking aggrandizement. This book's detailed analysis of coercion and community treatment, diagnosis, and psychopharmacology reveals that these characteristics are endemic, institutional, and protected in psychiatry. They are not just bad science but mad science. This book provides an engaging and readable scientific and social critique of current mental health practices. The authors are scholars, researchers, and clinicians who have written extensively about community care, diagnosis, and psychoactive drugs. This paperback edition makes Mad Science accessible to all specialists in the field as well as to the informed public.

Drugs, Crime, and Their Relationships Glenn D. Walters, 2014. Surveys administered to high school students, studies carried out on jail and prison inmates, and interviews conducted with substance abusers undergoing treatment all point to the same conclusion: drugs and crime are strongly connected. Why they are connected is less well understood, however. Written for middle to upper level undergraduate courses on drugs and crime or substance abuse and crime, this book examines the drug-crime connection in a systematic and comprehensive way. This book covers the entire drug-crime spectrum, starting with a review of drug and crime terminology, classification, and theory, and ending with policy implications for prevention, harm reduction, and macro-level management of the drug-crime problem. The opening chapters discuss drugs and crime separately for the purpose of setting the stage for later discussions on drug-crime relationships. As the book proceeds, the boundaries between drugs and crime blur, thus revealing the complex and intimate relationship that links these two behaviors.

The Culture of Feedback Daniel Belgrad, 2019-08-30 When we want advice from others we often casually speak of getting some feedback But how many of us give a thought to what this phrase means The idea of feedback actually dates to World War II when the term was developed to describe the dynamics of self regulating systems which correct their actions by feeding their effects back into themselves By the early 1970s feedback had become the governing trope for a counterculture that was reoriented and reinvigorated by ecological thinking The Culture of Feedback digs deep into a dazzling variety of left of center experiences and attitudes from this misunderstood period bringing us a new look at the wild side of the 1970s Belgrad shows us how ideas from systems theory were taken up by the counterculture and the environmental movement eventually influencing a wide range of beliefs and behaviors particularly related to the question of what is and is not intelligence He tells the story of a generation of Americans who were struck by a newfound interest in and respect for plants animals indigenous populations and the very sounds around them threading his tapestry with cogent insights on environmentalism feminism systems theory and psychedelics The Culture of Feedback repaints the familiar image of the 70s as a time of Me Generation malaise to reveal an era of revolutionary and hopeful social currents driven by desires to radically improve and feed back into the systems that had come before
