to her that the interest in hybridization of roses began to grow in France and from there it spread to the rest of Europe As hybridization of roses is an easy process those 160 species grew up into 6000 species of roses of cultivars and hybrids Prevost and Pepinieriste wrote down 880 names of different rose species in their Rose catalog But other rose species which were native to northwest Africa and North America were already being in use for medical purposes cooking purposes beautification purposes and also as symbols since ancient and medieval times The idea of My Love Is like a Red Red Rose has been en vogue for centuries Why is this so because a rose is normally accompanied with thorns which were a defensive protective epidermal outgrowths The original roses or creepers and they managed to cling to plants with the help of these thorns The idea of Roses for love have come down the millenniums as from the classical times when the rose was associated and identified with Venus Aphrodite
