The ____ of ____ By Means of Natural ____ or the ____ of Favoured ____ In The Struggle For Life Ian Monroe, Natural Forms of Defense Against Biological, Chemical and Nuclear Threats John Brighton, 2007-02-26 The events that took place on September 11th caused Dr John Brighton a naturopathic health consultant to ask himself questions about what role natural forms of healing might have in a scenario involving weapons of mass destruction WMD As he examined the issues and the nature of the threat he felt assured that a naturalistic approach could make a significant contribution in conjunction with that offered by conventional medicine Moreover he felt that to use both would provide a more powerful deterrent than if either were used alone The naturalistic approach would augment the use of drugs by adding 5 extra lines of defense aimed at supporting and strengthening the immune system to deal with such a dire event These lines include A psychological dimension A social dimension A preventative dimension An environmental dimension A specific dimension The whole idea of this holistic strategy is to employ prevention and immune enhancing factors in order to reduce the level of crisis to begin with As a result the dependency on antibiotics there are no effective antivirals and other valuable medical resources can be considerably reduced and most importantly preserved for when they would be needed most Another benefit of integrating these two systems would add what Dr Brighton calls synergistic complexity as a way to reduce the current crisis of germ resistance to many most potent antibiotics and to provide a holistic approach to all forms of WMD The book clarifies the scope of the threat we face by examining The variety of biological chemical and nuclear threats The factors involved in the creation of WMD The uncanny capacity of microbes to develop resistance to our medications The threat of bioengineering and the creation of superbugs How synergistic complexity could provide a possible solution A chapter is dedicated to focusing on the specific nature and challenges posed by each biological chemical and nuclear agent This includes A description of the agent How it causes harm How it might be used as a weapon and the possibility of it being used How it is detected diagnostically and in the field The conventional method of care and treatment The suggested natural forms of defense including herbs vitamins minerals and other natural substances and healing therapies The book ends with a forward looking chapter on emerging technologies that have promise of increasing our level of defense against WMD A bibliography and a full section on resources are available

Umphrey raises and answers two questions What is it to be a natural kind And are there in fact any natural kinds First using the everyday understanding of things he argues that natural kinds may be understood as classes or as types and that the members or tokens of such kinds are individual continuants A continuant is essentially a being in becoming a material thing which changes and yet remains the same in virtue of its nature or essence as long as it exists In the primary sense of the term then a natural kind is a class whose members closely resemble one another substantially in virtue of their essences Alternatively it is a type whose tokens exemplify it in virtue of their essences To answer the second question one must make use of relevant scientific theories as well Umphrey agrees with scientific essentialists that there are natural kinds but he argues that most of the chemical physical and biological kinds posited in current theories are not natural kinds in the primary sense of the term The natural kinds realism he affirms is thus quite restricted it requires the existence of enduring things which closely resemble one another in virtue of their essences and such things exist apparently only if they have come into being or emerged in the course of symmetry breaking events Natural Kinds and Genesis will be of interest to philosophers of science and to those interested in the metaphysics of natural kinds and their members

The Genius of Democracy Victoria Olwell, 2011-05-05 In the late nineteenth and early twentieth century United States ideas of genius did more than define artistic and intellectual originality They also provided a means for conceptualizing women's participation in a democracy that marginalized them Widely distributed across print media but reaching their fullest development in literary fiction tropes of female genius figured types of subjectivity and forms of collective experience that were capable of overcoming the existing constraints on political life The connections between genius gender and citizenship were important not only to contests over such practical goals as women's suffrage but also to those over national membership cultural identity and means of political transformation more generally In *The Genius of Democracy* Victoria Olwell uncovers the political uses of genius challenging our dominant narratives of gendered citizenship She shows how American fiction catalyzed political models of female genius especially in the work of Louisa May Alcott Henry James Mary Hunter Austin Jessie Fauset and Gertrude Stein From an American Romanticism that saw genius as the ability to mediate individual desire and collective purpose to later scientific paradigms that understood it as a pathological individual deviation that nevertheless produced cultural progress ideas of genius provided a rich language for contests over women's citizenship Feminist narratives of female genius projected desires for a modern public life open to new participants and new kinds of collaboration even as philosophical and scientific ideas of intelligence and creativity could often disclose troubling and more regressive dimensions Elucidating how ideas of genius facilitated debates about political agency gendered identity the nature of consciousness intellectual property race and national culture Olwell reveals oppositional ways of imagining women's citizenship ways that were critical of the conceptual limits of American democracy as usual

Alone in the World? Van Huyssteen, 2006-04-12 In *Alone in the World* first given as the 2004 Gifford Lectures at the University of Edinburgh J Wentzel van Huyssteen develops the interdisciplinary dialogue that he set out in *The Shaping of Rationality* 1999 applying this methodology to the uncharted waters between theological anthropology and paleoanthropology Among other things van Huyssteen argues that scientific notions of human uniqueness help us to ground theological notions of human distinctiveness in flesh and blood embodied experiences and protect us from overly complex theological abstractions regarding the image of God Focusing on the interdisciplinary problem of human origins and distinctiveness van Huyssteen accesses the origins of the embodied human mind through the spectacular prehistoric cave paintings of western Europe fifteen of which are reproduced in color in this volume Boldly connecting the widely separated fields of Christian theology and paleoanthropology through careful interdisciplinary reflection *Alone in the World* will encourage sustained investigation into the question of human uniqueness
