**Natural Radioactivity In Water Supplies** Jack K Horner, 2021-11-18 There is little disagreement that the potential effects of water contamination on human health and the environment should not be ignored even though the exact nature of those effects is not yet fully understood That permanently incapacitating and even lethal substances asbestos for example have in ignorance been introduced into the environment may become apparent only decades after their introduction A new principle in water quality regulation is emerging in response to awareness of these dangers An individual or organization can be held accountable for hazards to human health or for degradation of the environment created by the introduction of a substance even if the individual or organization is not the source of that substance even if no regulation of the substance currently exists and even if the substance is not known to be hazardous or to degrade the environment at the time its release occurs This book outlines the scientific aspects of the control of natural radioactivity in water supplies as well as the labyrinthine uncertainties in water quality regulation concerning natural radiocontamination of water The author provides an introduction to the theory of natural radioactivity addresses risk assessment describes sources and effects of natural radiocontamination of water surveys federal water law concerning natural radiocontamination and presents an account of how one city dealt with the perplexities that mark this rapidly evolving area of water quality regulation

health effects of radon regulatory aspects of natural radiation exposures In these papers the results of many new surveys of natural radionuclide levels in the environment and of improved methods of detection are described While some of the natural radiation sources investigated are unmodified by human activity many accounts are given here of exposures to natural sources which have been enhanced by technology Such TENR and NORM exposures are shown to range from activities such as mining oil and gas exploitation the use of industrial by products as building materials to space travel to name but a few In several cases quite high doses to some individuals are shown to occur Accounts are given here of methods to prevent and reduce exposures to such sources     Manual of Individual and Non-public Water Supply Systems ,1991     **Manual of**
