 〇〇〇〇〇〇〇〇〇〇 〇〇〇〇〇〇〇 (Japan). 〇〇〇〇〇. 〇〇〇〇〇,1979 **New Natural Products and Plant Drugs with Pharmacological, Biological or Therapeutical Activity** H.K. Wagner,P.M. Wolff,2012-12-06 The fact that of the approximately 600 000 plant species existing on the earth only some 5 % have been specifically investigated chemically or pharmacologically is a challenge to chemists specializing in natural substances and to pharmacologists In view of the limited number of research capacities and the ever diminishing financial means this challenge can only be met if together with an improvement and refinement of methods of analysis medicinal plant research is carried out on a broader interdisciplinary basis with comparable scientifically recognized screening methods and if it is better coordinated with greater use of modern documentation means It is thus necessary in the future to concentrate specifically on projects leading to the development of new medicinal preparations The plenary lectures held in the present symposium of the 1st International Congress for Research on Medicinal Plants reflect these efforts and tendencies At the same time they provide a survey of some of the fields of medicinal plant research which are at present most actual and most intensively researched They range from plant screening isolation and structure elucidation of new principles to the therapeutical optimization of a natural product The lectures given at this congress show clearly the necessity in addition to national phytochemical societies for a central international organisation in which all active medicinal plant researchers in the world are included Their aim should be to provide the impulse for more optimal rational research aimed at the solution of specific projects **The Biochemistry of Gene Expression in Higher Organisms** J.K. Pollak,J.W. Lee,2013-03-09 The papers assembled in this volume are based on the symposium on The Biochemistry of Gene Expression in Higher Organisms which was held at the University of Sydney from May 14 19 1972 Many symposia have been held on the control of gene expression in prokaryotes but to date considerably less attention has been paid to eukaryotic organisms It has been appreciated only recently that some of the information gained from the study of prokaryotes is directly applicable to eukaryotes however it is now realized that the principles of the control mechanisms of gene expression in these two classes of organism differ considerably This symposium was organized in an effort to bring together workers from widely different fields concerned with gene expression with the aim of circumscribing the current concepts and speculating on future developments in studies on the mechanisms which control and modulate gene expression in the widest sense in eukaryotes This volume contains all the 36 papers presented at the symposium In a few instances the sequence of contributions has been changed to provide the reader with a more logical presentation In addition three papers which were not actually presented at the symposium have been included in this volume These three papers were not read because last minute hitches prevented speakers from attending Proceedings of the National Academy of Sciences of the United States of America National Academy of Sciences (U.S.),1983-09
