National Income and Nature:

Externalities, Growth and Steady State J.J. Krabbe, Wim Heijman, 2012-12-06 Since the environmental revolution began in the late 1960s economists have done a lot of work in the field of economic theory building on the preservation of nature Meanwhile environmental economic literature has swelled to a large stream of articles in journals of different signature As a result a coherent economic view of the phenomenon of environmental degradation has emerged Several kinds of green public policies and their impacts on both nature and the performance of the economy have been analysed The feasibility of specific types of policy has also been discussed The aim of the book is to provide an insight into the ways economists analyse the problems of environmental pollution and the depletion of natural resource To this purpose a number of articles have been selected Some of them have a fundamental character others an applied nature and are foremost practically oriented The presentation of the collection emphasizes our belief that economists are able to deliver an essential contribution to the design of policies to protect nature It is clear that nature and environment may no longer be regarded as free gifts to society Rather they have to be seen as scarce resources and environmental disruption and resource depletion as allocation problems If a natural resource is scarce a price must be charged in accordance with the degree of scarcity since otherwise society will be confronted with misallocations In this connection there are two topics which are of particular interest to economists

Nature-Based Flood Risk Management on Private Land Thomas Hartmann, Lenka Slavíková, Simon McCarthy, 2019-08-22 This open access book addresses the various disciplinary aspects of nature based solutions in flood risk management on private land In recent decades water management has been moving towards nature based solutions These are assumed to be much more multi purpose than traditional grey infrastructures and seem to be regarded as a panacea for many environmental issues At the same time such measures require more and mostly privately owned land and more diverse

stakeholder involvement than traditional grey engineering approaches They also present challenges related to different disciplines Nature based solutions for flood risk management not only require technical expertise but also call for interdisciplinary insights from land use planning economics property rights sociology landscape planning ecology hydrology agriculture and other disciplines to address the challenges of implementing them Ultimately nature based flood risk management is a multi disciplinary endeavor Featuring numerous case studies of nature based flood risk management accompanied by commentaries this book presents brief academic reflections from two different disciplinary perspectives that critically highlight which specific aspects are of significance and as such underscore the multi disciplinary nature of the challenges faced

The Unique Nature of the Responsibilities of the International Monetary Fund Mr.Manuel Guitián,1992-06-15 Bretton Woods constituted the first formal international agreement on a code of conduct applicable for economic transactions among countries that had subscribed to it This pamphlet focuses on only one aspect of that code of conduct the norms that have guided the conduct of financial and exchange transactions among countries as they have been presented in the original Articles of Agreement of the IMF and their subsequent amendments The paper outlines the fundamental characteristics of the IMF examines the direct link between surveillance and conditionality explores potential risks and dangers that might compromise certain fundamental features of the institution and presents a set of ideas and proposals to ensure the activities of the IMF maintain continuity of its institutional uniqueness
