Photographs, Museums, Collections Elizabeth Edwards, Christopher Morton, 2015-05-19 The status of photographs in the history of museum collections is a complex one From its very beginnings the double capacity of photography as a tool for making a visual record on the one hand and an aesthetic form in its own right on the other has created tensions about its place in the hierarchy of museum objects While major collections of art photography have grown in status and visibility photographs not designated art are often invisible in museums Yet almost every museum has photographs as part of its ecosystem gathered as information corroboration or documentation shaping the understanding of other classes of objects and many of these collections remain uncatalogued and their significance unrecognised This volume presents a series of case studies on the historical collecting and usage of photographs in museums Using critically informed empirical investigation it explores substantive and historiographical questions such as what is the historical patterning in the way photographs have been produced collected and retained by museums How do categories of the aesthetic and evidential shape the history of collecting photographs What has been the work of photographs in museums What does an understanding of photograph collections add to our understanding of collections history more broadly What are the methodological demands of research on photograph collections The case studies cover a wide range of museums and collection types from art galleries to maritime museums national collections to local history museums and international perspectives including Cuba France Germany New Zealand South Africa and the UK Together they offer a fascinating insight into both the history of collections and collecting and into the practices and poetics of archives across a range of disciplines including the history of science museum studies archaeology and anthropology

Photography and the Arts Juliet Hacking, Joanne Lukitsh, 2020-10-29 Photography both in the form of contemporary practice and that of historical material now occupies a significant place in the citadels of Western art culture It has an institutional network of its own embedded within the broader art world with its own specialists including academics critics curators collectors dealers and conservators All of this cultural activity consolidates an artistic practice and critical discourse of photography that distinguishes what is increasingly termed art photography from its commercial scientific and amateur guises But this long awaited recognition of photography as high art brings new challenges How will photography's newly privileged place in the art world affect how the history of creative photography is written Modernist claims for the medium as having an aesthetic often turned on precedents from painting Postmodernism challenged a cultural hierarchy organized around painting Nineteenth century photographs move between the symbolic spaces of the gallery wall and the archive de contextualised for art and re contextualised for history But what of the contemporary writings images and practices that negotiated an aesthetic status for

the photographic Photography and the Arts revisits practices both celebrated and elided by the modernist and postmodernist grand narratives of art and photographic history in order to open up new critical spaces Written by leading scholars in the fields of photography art and literature the essays examine the metaphorical as well as the material exchanges between photography and the fine graphic reproductive and sculptural arts

Reading Faces Edward Higgs, 2025-10-20 Reading Faces is the first book to discuss the historical contexts and theoretical underpinnings of the artificial intelligence AI systems that identify individuals or purport to ascribe emotions and characteristics to them based on their facial features It examines the direct impact of past research on the development of AI systems the way in which the past provides contexts which have predisposed people to accept outputs of AI systems as common sense how the role of politics and the changing nature of the state have led to the introduction of AI systems and their precursors how previous technologies led to the acceptance of the introduction of superficially similar AIs and how the outputs and biases such as purported associations between race and criminality of facial biometrics systems have been determined by the historical nature of the underlying datasets they analyze Reading Faces approaches these issues within the sweep of Western History how it has shaped conceptual categories about the application and ethics of AI and tried to foist those ideas and values on the Global South This book is essential reading for postgraduates scholars as well as non specialist readers such as booksellers and librarians interested in modern AI technology

The Early American Daguerreotype Sarah Kate Gillespie, 2016-02-12 The American daguerreotype as something completely new a mechanical invention that produced an image a hybrid of fine art and science and technology The daguerreotype invented in France came to America in 1839 By 1851 this early photographic method had been improved by American

daguerreotypists to such a degree that it was often referred to as the American process. The daguerreotype now perhaps mostly associated with stiffly posed portraits of serious visaged nineteenth century personages was an extremely detailed photographic image produced through a complicated process involving a copper plate, light sensitive chemicals, and mercury fumes. It was as Sarah Kate Gillespie shows in this generously illustrated history something wholly and remarkably new, a product of science and innovative technology that resulted in a visual object. It was a hybrid with roots in both fine art and science and it interacted in reciprocally formative ways with fine art, science, and technology. Gillespie maps the evolution of the daguerreotype as medium and as profession from its introduction to the ascendancy of the American process, tracing its relationship to other fields and the professionalization of those fields. She does so by recounting the activities of a series of American daguerreotypists including fine artists, scientists, and mechanical tinkerers. She describes, for example, experiments undertaken by Samuel F. B. Morse as he made the transition from artist to inventor, how artists made use of the daguerreotype both borrowing conventions from fine art and establishing new ones for a new medium, the use of the daguerreotype in various sciences, particularly astronomy, and technological innovators who drew on their work in the mechanical arts. By the 1860s the daguerreotype had been supplanted by newer technologies. Its rise and fall represents an early instance of the ever constant stream of emerging visual technologies. "Visions of the Industrial Age, 1830-1914" Amy

Woodson-Boulton, 2017-07-05. Providing a comprehensive interdisciplinary assessment and with a particular focus on expressions of tension and anxiety about modernity, this collection examines visual culture in nineteenth century Europe as it attempted to redefine itself in the face of social change and new technologies. Contributing scholars from the fields of history, art literature, and the history of science investigate the role of visual representation and the dominance of the image by looking at changing ideas expressed in representations of science, technology, politics, and culture in advertising, art periodicals, and novels. They investigate how during the period new emphasis was placed on the visual with emerging forms of mass communication: photography, lithography, newspapers, advertising, and cinema, while older forms as varied as poetry, the novel, painting, interior decoration, and architecture became transformed. The volume includes investigations into new innovations and scientific development such as the steam engine, transportation, and engineering, the microscope, spirit photography, and the orrery, as well as how this new technology is reproduced in illustrated periodicals. The essays also look at more traditional forms of creative expression to show that the same concerns and anxieties about science, technology, and the changing perceptions of the natural world can be seen in the art of Armand Guillaumin, Auguste Rodin, Gustave Caillebotte, and Camille Pissarro in colonial nineteenth century novels, in design manuals, in museums, and in the decorations of domestic interior spaces. Visions of the Industrial Age, 1830-1914 offers a thorough exploration of both the nature of modernity and the nature of the visual. **Darwin's Camera** Phillip Prodger, 2009-10-22. Darwin's Camera tells the extraordinary story of how Charles Darwin changed the way pictures are seen and made. In his illustrated masterpiece

Expression of the Emotions in Man and Animals 1871 Darwin introduced the idea of using photographs to illustrate a scientific theory his was the first photographically illustrated science book ever published Using photographs to depict fleeting expressions of emotion laughter crying anger and so on as they flit across a person's face he managed to produce dramatic images at a time when photography was famously slow and awkward The book describes how Darwin struggled to get the pictures he needed scouring the galleries bookshops and photographic studios of London looking for pictures to satisfy his demand for expressive imagery He finally settled on one the giants of photographic history the eccentric art photographer Oscar Rejlander to make his pictures It was a peculiar choice Darwin was known for his meticulous science while Rejlander was notorious for altering and manipulating photographs Their remarkable collaboration is one of the astonishing revelations in Darwin's Camera Darwin never studied art formally but he was always interested in art and often drew on art knowledge as his work unfolded He mingled with the artists on the voyage of HMS Beagle he visited art museums to examine figures and animals in paintings associated with artists and read art history books He befriended the celebrated animal painters Joseph Wolf and Briton Riviere and accepted the Pre Raphaelite sculptor Thomas Woolner as a trusted guide He corresponded with legendary photographers Lewis Carroll Julia Margaret Cameron and G B Duchenne de Boulogne as well as many lesser lights Darwin's Camera provides the first examination ever of these relationships and their effect on Darwin's work and how Darwin in turn shaped the history of art

Lets delve into the realm of popular books, exploring the fascinating narratives that have enthralled audiences this year. Nature Exposed Photography As Eyewitness In Victorian Science : Colleen Hoover's "It Ends with Us" This heartfelt tale of love, loss, and resilience has captivated readers with its raw and emotional exploration of domestic abuse. Hoover expertly weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can triumph. Nature Exposed Photography As Eyewitness In Victorian Science : Taylor Jenkins Reid's "The Seven Husbands of Evelyn Hugo" This intriguing historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reid's compelling storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Nature Exposed Photography As Eyewitness In Victorian Science : Delia Owens' "Where the Crawdads Sing" This evocative coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens spins a tale of resilience, survival, and the transformative power of nature, entrancing readers with its evocative prose and mesmerizing setting. These top-selling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of captivating stories waiting to be discovered. The novel begins with Richard Pappen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a brilliant and gripping novel that will keep you guessing until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
