Nature Of Music Vol I:

Greek Reflections on the Nature of Music Flora R. Levin, 2009-04-27 In this book Flora Levin explores how and why music was so important to the ancient Greeks She examines the distinctions that they drew between the theory of music as an art ruled by number and the theory wherein number is held to be ruled by the art of music These perspectives generated more expansive theories particularly the idea that the cosmos is a mirror image of music's structural elements and conversely that music by virtue of its cosmic elements time motion and the continuum is itself a mirror image of the cosmos These opposing perspectives gave rise to two opposing schools of thought the Pythagorean and the Aristoxenian Levin argues that the clash between these two schools could never be reconciled because the inherent conflict arises from two different worlds of mathematics Her book shows how the Greeks' appreciation of the profundity of music's interconnections with philosophy mathematics and logic led to groundbreaking intellectual achievements that no civilization has ever matched

The Music of Nature William Gardiner, 1849 **The Nature of Art** A. L. Cothey, 2006-09-07 Although various aesthetic themes have preoccupied many major philosophers from Plato to Goodman the central questions of the philosophy of art have remained ill defined This book gives a concise and systematic account of the leading philosophical ideas about art and aesthetics from ancient times to the present day and goes on to propose a new theory of aesthetic satisfaction and artistic abilities **An Essay on Practical Musical Composition, according to the Nature of that Science and the Principles**

The relationship between music and language Lutz Jäncke, Traditionally music and language have been treated as different psychological faculties This duality is reflected in older theories about the lateralization of speech and music in that speech functions were thought to be localized on the left and music functions on the right hemisphere But with the advent of modern brain imaging techniques and the improvement of neurophysiological measures to investigate brain functions an entirely new view on the neural and psychological underpinnings of music and speech has evolved The main point of convergence in the findings of these new studies is that music and speech functions have many aspects in common and that several neural modules are similarly involved in speech and music There is also emerging evidence that speech functions can benefit from music functions and vice versa This new research field has accumulated a lot of new information and it is therefore timely to bring together the work of those researchers who have been most visible productive and inspiring in this field and to ask them to present their new work or provide a summary of their laboratory's work **Nature** Sir Norman
