**China's Scientific Elite** Cong Cao,2004-07-31 China s Scientific Elite is a study of those scientists holding China s highest academic honour membership of the Chinese Academy of Sciences Having carried out extensive systematic data collection of CAS members Cao examines the social stratification system of the Chinese science community and the way in which politics and political interference has effected the stratification The book then goes on to compare the Chinese system to the stratification of the US scientific elite The conclusions are fascinating not least because one national elite resides in a democratic liberal social system and the other in an authoritarian social system

**Current British Directories** ,2003 Discovering the Nanoscale Davis Baird,Alfred Nordmann,Joachim Schummer,2004 I recommend this book to anyone interested in learning the history of nanoscale science and to those who would like to better understand some of the ethical legal and social dilemmas to what I believe has rightly been labeled the

technology of the 21st century Rocky Rawstern Nanotechnology Now Science and engineering industry and politics environmentalists and transhumanists are Discovering the Nanoscale Policy makers are demanding explicit consideration of ethical legal and social aspects and popular books are explaining the achievements and promises of nanoscience It may therefore seem surprising that this is the first collection of studies that considers nanoscience and nanotechnologies from the critical perspective of Science and Technology Studies STS However when one appreciates that such a critical perspective needs to be historically informed it often involves intimate acquaintance with the research process Accordingly this book on the historical analytical and ethical study of nanoscience and technology has come together in a period of several years Though it presents only first results these results for the most part stem from sustained investigations of nanoscience and nanotechnologies and of the contexts that are shaping their development Nanoscience and technologies are developing very quickly and for this reason both pose a challenge to the more reflective approach commonly taken by science studies while at the same time requiring the perspective provided by science studies scholars Many are convinced that nothing meaningful can be said about the social and ethical implications of nanotechnologies at this early stage but one can already see what programmatic attitudes go into nanoscale research what metaphors are shaping it and what conception of nature is implicit in its vision It is also often assumed that in order to consider all aspects of nanotechnologies it is sufficient to know a bit of the science and to have some ethical intuitions This collection of papers establishes that one also needs to appreciate nanoscale research and development in the larger context of the changing relations of science technology and society

**Regulation of Agricultural Biotechnology** Robert E. Evenson,V. Santaniello,2004-03-29 The regulatory systems in place prior to the development and expansion of agricultural biotechnology are still responding to this new form of technology Such systems include trade law intellectual property law contract law environmental regulations and biosafety regulations This book reviews these regulatory changes and consists of 24 chapters developed from papers presented at a conference of the International Consortium on Agricultural Biotechnology Research held in Italy in July 2002 It primarily considers the relationship between these changes and innovation market development and international trade      *Current Controversies in the Biological Sciences* Karen F. Greif,Jon F. Merz,2007-02-23 In recent years advances in biological science and technology have outpaced policymakers attempts to deal with them *Current Controversies in the Biological Sciences* examines the ways in which the federal government uses scientific information in reaching policy decisions providing case studies of the interactions between science and government on different biomedical biological and environmental issues These case studies document a broad range of complex issues in science policy from the Human Genome Project to tobacco regulation and provide an accessible overview of both the science behind the issues and the policy making process The cases illustrate the different ways in which science and politics intersect in policy decisions as well as the different forms policy itself may take

including not only regulatory action but the lack of regulation Among the topics examined are public and private research funding as seen in gene patenting reluctance to regulate even when a product has been proven unhealthy as in the case of tobacco a comparison of U S and international policy responses to genetically modified organisms and the competing interests at play in air pollution policy Each chapter includes shorter side essays on related topics for example essays on issues raised by the SARS epidemic accompany the detailed case study of the public health response to the anthrax laced mail received in the weeks after 9 11 This clear and readable introduction to controversial issues in the biological sciences will be a valuable resource for students of science policy and bioethics and for professionals in industry government and nongovernmental organizations who need background on emerging issues in the biological sciences
