## **Natures Web An Exploration Of Ecological Thinking:**

Nature's Web Peter H. Marshall,1992 This book places the contemporary debate over green issues in its historical context and illuminates what is loosely called earth wisdom The book traces the development of ecological thought from its origins in ancient religions and philosophies to modern science and ethics covering the Taoists the Egyptians the Greeks the Celts and North American Indians as well as alchemy the Enlightenment Romantics Darwinism and Gaia blurb *Thinking Through the Environment* Mark J. Smith,2005-09-30 This reader brings together material from ecological thought environmental policy environmental philosophy social and political thought historical sociology and cultural studies The extracts tell the story of the way the natural environment has been understood in the modern world and how this has recently been questioned as contemporary societies are seen as characterised by uncertainty and complexity The literature guides the reader through the conventional grounds for thinking about rights and obligations in relation to future generations non human animals and the biotic communities bringing each into question This then leads into a critical examination of social and political theories and their capacity for drawing on ecological thought Each of the seven sections of readings is introduced by the editor who locates the set of readings within the specific themes and issues at the heart of each section This broad reaching and thought provoking set of readings stresses the diversity of response to environmental problems both within and between anthropocentric and ecocentric approaches and will encourage the reader to examine how they are manifested in the areas of environmental ethics policy analysis and social and political theory **Jesus and the Eyewitnesses** Richard Bauckham,2008-09-22 Noted New Testament scholar Bauckham challenges the prevailing assumption the accounts of Jesus circulated as anonymous community traditions instead asserting that they were transmitted in the name of the original eyewitness Exploring Wild Law Peter Burdon,2011 From cover Wild law is a groundbreaking approach to law that stresses human interconnectedness and dependence on nature It critiques existing law for promoting environmental harm and seeks to establish a mutually enhancing human Earth relationship For the first time this volume brings together voices from the leading proponents of wild law around the world It introduces readers to the idea of wild law and considers its relationship to environmental law the rights of nature science religion property law and international governance **Companion Encyclopedia of Geography** Ian Douglas,Mike Robinson,1996 **Companion Encyclopedia of Geography** Prof Ian Douglas,Ian Douglas,Richard John Hugget,Mike Robinson,2003-09-01 The Companion Encyclopedia of Geography provides an authoritative and provocative source of reference for all those concerned with the earth and its people Examining both physical and human geography and charting human activities within their habitat up to the present day this Companion also asks what lies in the future A differentiated world A world transformed by the growth of a global economy The global scale of habitat modification A world of questions Changing worlds changing geographies Geographical futures The forty five self contained chapters are bound into a unifying whole by the editors general and part introductions

each chapter provides details of the most useful sources of further reading and research and the volume is concluded with a comprehensive index This is an invaluable resource not only for students teachers and researchers in the academic domain but also professionals in interested commercial and public sector organisations     *Routledge International Companion to Education* Miriam Ben-Peretz, Sally Brown, Bob Moon, 2004-04-28 The Routledge International Companion to Education addresses the key issues underpinning the rethinking and restructuring of education at the beginning of the new millennium The volume contains over fifty major contributions exploring a wide range of issues including philosophy of education the economics and resourcing of education testing and assessment current issues and future prospects standards multiculturalism anti racism computers in classrooms mother tongue education civics and moral education Each chapter gives a contemporary account of developments in the field and looks to the future and the directions that new activity and inquiry are likely to take All the chapters are written from an international perspective     *Philosophy and the Natural Environment* Robin Attfield, Andrew Belsey, 1994-09-30 Leading international environmental philosophers further the debate about the environment and the metaphysical ethical social and international implications     **Australia, New Zealand, and the Pacific** Donald S. Garden, 2005-08-19 A fascinating study of the environmental history of Australia New Zealand and the islands of the Pacific from the time of the dinosaurs to the present day Of interest to students and academics alike this book provides a much needed synthesis of the recent literature on the environmental history of Australia and Oceania Part of ABC CLIO's Nature and Human Societies series this book maps out the key trends in the region's environmental history charting the creation of the Australian continent from the ancient land mass of Gondwanaland to the arrival of humans Especially fascinating are the chapters highlighting how successive waves of human migration created environmental havoc throughout the region leading to the collapse of the Easter Island civilization and the spread of nonindigenous flora and fauna From the controversies over the reasons why creatures such as the marsupial lion and the giant kangaroo became extinct to such contemporary problems as deforestation and global warming this book contains sobering lessons for us all     *Border Crossings* Fred Dallmayr, 1999-08-25 Comparative political theory is at best an embryonic and marginalized endeavor As practiced in most Western universities the study of political theory generally involves a rehearsal of the canon of Western political thought from Plato to Marx Only rarely are practitioners of political thought willing and professionally encouraged to transgress the canon and thereby the cultural boundaries of North America and Europe in the direction of genuine comparative investigation *Border Crossings* presents an effort to remedy this situation fully launching a new era in political theory Thirteen scholars from around the world examine the various political traditions of West South and East Asia and engage in a reflective cross cultural discussion that belies the assumptions of an Asian essence and of an unbridgeable gulf between West and non West The denial of essential differences does not however amount to an endorsement of essential sameness As viewed and as practiced by contributors to this ground breaking volume comparative political theorizing must

steer a course between uniformity and radical separation this is the path of border crossings      **Sustainability Appraisal**

Barry Dalal-Clayton, Barry Sadler, 2014-03-26 Sustainability Appraisal is a sourcebook of the state of the art of this rapidly emerging and diversifying area. It draws on a wealth of international experiences and approaches to illustrate the status and scope of Sustainability Appraisal Assessment SA. This comprehensive guide highlights how SA can be used to analyse and integrate the key environmental, social and economic pillars of sustainability into decision making at all levels from policy to project to investment by government, business and industry or international organizations. Distilling both published and unpublished materials and with contributions from a range of leading experts, organizations and agencies, this book will be of significant value to professionals everywhere who are in need of a solid reference guide to what constitutes SA practice and more importantly how and when it can be applied      *Eco-Impacts and the Greening of Postmodernity* Tom Jagtenberg, David

McKie, 1996-11-07 Addressing a growing need to examine environmental issues from a cultural perspective, this innovative book adopts a cultural studies approach to reach a deeper understanding of the significance of ecological issues in our lives. *Eco Impacts and the Greening of Postmodernity* explores such vital questions as: Can nature survive? How do academic disciplines engage with environmental crises? And how do we map sustainable futures? The authors, Tom Jagtenberg and David McKie, bring a body of relevant literature into the debate that stems from both cultural and environmental issues as well as their own multidisciplinary perspectives on the subject      *Ecology of Java & Bali* Anthony J. Whitten, Roehayat Emon

Soeriaatmadja, 2013-02-05 *The Ecology of Java and Bali* is a comprehensive ecological survey of two of the most ecologically diverse islands in the Pacific. It also contains the results of original research, interviews and personal experience. It will be useful to resource managers, ecologists and government planners as well as to all others interested in the region. Java and Bali are the best known of all the islands in the Indonesian archipelago. Nowhere else in the country are ecological issues of such importance and nowhere else is there a better chance of the major development problems being solved. This is because Java has the greatest concentration of development projects, the densest population, excellent human resources and the interest of many of the most powerful decision makers. Bali meanwhile has the eyes of the world on it as an important tourist destination enjoyed by both domestic and foreign visitors      **The Philosophical Roots of the Ecological Crisis** Joshtrom

Isaac Kureethadam, 2018-06-11 *The Philosophical Roots of the Ecological Crisis* traces the conceptual sources of the present environmental degradation within the worldview of Modernity and particularly within the thought of René Descartes, universally acclaimed as the father of modern philosophy. The book demonstrates how the triple foundations of the Modern worldview in terms of an exaggerated anthropocentrism, a mechanistic conception of the natural world and the metaphysical dualism between humanity and the rest of the physical world can all be largely traced back to Cartesian thought with direct ecological consequences      **The Idea of Nature in Disney Animation** David

Whitley, 2016-03-03 In the second edition of *The Idea of Nature in Disney Animation*, David Whitley updates his 2008 book to

reflect recent developments in Disney and Disney Pixar animation such as the apocalyptic tale of earth's failed ecosystem WALL E As Whitley has shown and Disney's newest films continue to demonstrate the messages animated films convey about the natural world are of crucial importance to their child viewers Beginning with Snow White Whitley examines a wide range of Disney's feature animations in which images of wild nature are central to the narrative He challenges the notion that the sentimentality of the Disney aesthetic an oft criticized aspect of such films as Bambi The Jungle Book Pocahontas Beauty and the Beast and Finding Nemo necessarily prevents audiences from developing a critical awareness of contested environmental issues On the contrary even as the films communicate the central ideologies of the times in which they were produced they also express the ambiguities and tensions that underlie these dominant values In distinguishing among the effects produced by each film and revealing the diverse ways in which images of nature are mediated Whitley urges us towards a more complex interpretation of the classic Disney canon and makes an important contribution to our understanding of the role popular art plays in shaping the emotions and ideas that are central to contemporary experience

**International Environmental Law, Policy, and Ethics** Alexander Gillespie, 2014-08-21 This second edition of International Environmental Law Policy and Ethics revises and expands this groundbreaking study into the question of why the environment is protected in the international arena This question is rarely asked because it is assumed that each member of the international community wants to achieve the same ends However in his innovative study of international environmental ethics Alexander Gillespie explodes this myth He shows how nations like individuals create environmental laws and policies which are continually inviting failure as such laws can often be riddled with inconsistencies and be ultimately contradictory in purpose Specifically he seeks a nexus between the reasons why nations protect the environment how these reasons are reflected in law and policy and what complications arise from these choices This book takes account of the numerous developments in international environmental law and policy that have taken place the publication of the first edition most notably at the 2002 World Summit on Sustainable Development and the 2012 Rio 20 United Nations Conference on Sustainable Development Furthermore it addresses recent debates on the economic value of nature and the problems of the illegal trade in species and toxic waste The cultural context has also been considerably advanced in the areas of both intangible and tangible heritage with increasing attention being given to conservation wildlife management and the notion of protected areas The book investigates the ways in which progress has been made regarding humane trapping and killing of animals and how in contrast the Great Apes initiative and similar work with whales have failed Finally the book addresses the fact that while the notion of ecosystem management has been embraced by a number of environmental regimes it has thus far failed as an international philosophy

**A Radical Green Political Theory** Alan Carter, 2013-12-16 This volume is the first systematic comprehensive and cogent environmental political philosophy It exposes the relationships between the ever worsening environmental crises the nature of prevailing economic structures and the role of the modern state and concludes that the

combination of these factors is driving humanity towards destruction Innovative provocative and cutting edge A Radical Green Political Theory will be of enormous value to all those with an interest in the environment political theory and moral and political philosophy     *A Radical Green Political Theory* Alan B. Carter,1999 This volume is the first systematic comprehensive and cogent environmental political philosophy It will be of enormous value to all those with an interest in the environment political theory and moral and political philosophy     How to Raise a Wild Child Scott D. Sampson,2015 An easy to use guide for parents teachers and others looking to foster a strong connection between children and nature complete with engaging activities troubleshooting advice and much more     *Law and Ecology* Richard O. Brooks,Ross Jones,2017-07-05 In 1970 Earth Day was first celebrated marking the dawn of worldwide environmental consciousness and the passing of many environmental laws In part these events were the result of the maturing of the science of ecology which recognized the interdependence of the web and cycles of nature This volume explores the relationship between ecology and environmental law beginning with a description of the two very different disciplines This description is followed by a history of their episodic interactions the early period of origin the mid century formative period from 1950 to 1970 the initial serious period of interaction after Earth Day in 1970 and the testing of the relationship during the next two decades Utilizing a number of case studies examinations of the key linkage persons legal instruments and the migration of ecological concepts and frameworks this book analyzes the final flowering of an ecosystem regime which embraces the connections between the two disciplines of ecology and environmental law Concluding with an inventory of the problems posed by the relationship between the two disciplines and an agenda for future research this clearly structured comprehensive and stringent book is an essential resource for all serious scholars and students of ecology and environmental law
