School mathematics in the ~1990sæ [nineteen nineties] ,1985

Toward Equity in Quality in Mathematics

Education Murad Jurdak,2009-07-30 Educational equity and quality are not only research issues which cut across different disciplines but are major determinants of socio economic and human development in both industrial and developing countries The status and role of mathematics a subject which has long enjoyed a privileged status in school curricula worldwide due to its perceived role in science and technology render equity and quality in mathematics education at the heart of human development This is reflected by governments relatively large investments in improving the quality of mathematics education and extending it to marginalized and underprivileged groups The purpose of Toward Equity in Quality in Mathematics Education is four fold First the book examines the constructs of equity and quality and their interdependence from different perspectives Second it develops a conceptual framework for studying and analyzing the two constructs Third it examines consolidates and re structures the literature on equity and quality in mathematics education Finally using data from TIMSS 2003 the book investigates the within and across country impact of the different equity related factors on mathematics achievement in a sample of countries representative of worldwide geographical and cultural regions Towards Equity in Quality in Mathematics Education uses a multi dimensional conceptual framework to study and analyze issues in equity and quality The framework consists of five perspectives hypothesized as determinants of equity in quality in mathematics education Mathematical societal educational ideological and genetic The framework can be thought of as a pyramid with mathematics as its base and the societal educational ideological and genetic perspectives as its faces Thus each point within this pyramid represents a unique equity in quality situation i e with different coordinates with respect to mathematical societal educational ideological and genetic perspectives Towards Equity in Quality in Mathematics Education is useful for teachers and researchers in mathematics education

Windows on Mathematical Meanings Richard Noss,Celia Hoyles,2012-12-06 This book is the culmination of some ten years theoretical and empirical investigation Throughout this period we have come into contact with many who have stimulated our thinking some of whom belong to the community of Mathematics Educators Our membership of that community has challenged us to make sense of some deep issues related to mathematical learning especially the cognitive and pedagogical faces of mathematical meaning making Alongside this community we are privileged to have been part of another whose members are centrally concerned both with mathematics and education Yet many of them might reject the label of Mathematics Educators This community has historically been clustered around what is now called the Epistemology and Learning Group at the Massachusetts Institute of Technology Their work has focused our attention on cognitive science ethnography sociology artificial intelligence and other related disciplines Crucially it has forced our awareness of the construction of computational settings as a crucial component of the struggle to understand how mathematical learning happens We have sometimes felt that few have tried to span both

communities Indeed an analysis of the references in the literature would we are sure reveal that the two communities have often ignored each other's strengths One reason for writing this book is born of our hope that we might draw together Mathematics Educators and mathematics educators and assist both communities in recognising that there are insights that might be derived from each other *Developing Understanding In Primary Mathematics* Deirdre Pettitt, Andrew Davis, 2003-12-16 First Published in 1994 Routledge is an imprint of Taylor Francis an informa company

Performing Math Andrew Fiss, 2020-11-13 Performing Math tells the history of expectations for math communication and the conversations about math hatred and math anxiety that occurred in response Focusing on nineteenth century American colleges this book analyzes foundational tools and techniques of math communication the textbooks that supported reading aloud the burnings that mimicked pedagogical speech the blackboards that accompanied oral presentations the plays that proclaimed performers identities as math students and the written tests that redefined student performance Math communication and math anxiety went hand in hand as new rules for oral communication at the blackboard inspired student revolt and as frameworks for testing student performance inspired performance anxiety With unusual primary sources from over a dozen educational archives Performing Math argues for a new performance oriented history of American math education one that can explain contemporary math attitudes and provide a way forward to reframing the problem of math anxiety

Trusting Schools and Teachers Gerry McNamara, Joe O'Hara, 2008 Trusting Schools and Teachers Developing Educational Professionalism Through Self Evaluation emerged from a series of studies undertaken with teachers at various stages of their careers exploring the impact of a range of evaluation systems on their personal and professional development The book begins with a comparative analysis of the rise of school and teacher evaluation charting the trends conceptual and political influences and highlights how the concept of self evaluation has come for a variety of reasons to play a surprisingly large role in the emerging approaches to school and teacher evaluation This is illustrated by a detailed analysis of the

emerging system of whole school evaluation in Ireland Research indicates that while self evaluation looms large in the system s theoretical framework in fact there is strong evidence that neither schools nor teachers have the expertise required to systematically self evaluate This book identifies methodologies designed to empower schools and teachers to become genuinely self evaluating through the development of research skills in the context of online communities of practice

on dozens of interviews and extensive historical research and spiced with interesting photographs this entertaining book relates stories about mathematicians who have defied stereotypes There are five chapters about women that provide insight into the nineteenth and the mid twentieth century the early 1970s the early 1990s and 2004 Activists in many fields will take heart at the progress made during that time The author documents the rudimentary struggles to become professionals being married without entirely giving up a career organizing to eliminate flagrant discrimination improving the daily treatment of women in the professional community and the widespread efforts toward true equality The stories of African Americans in mathematics include the efforts of Benjamin Banneker an eighteenth century American who had three grandparents born in Africa He helped design Washington DC and made the computations for almanacs that succeeded Benjamin Franklin s There are stories about African American mathematicians who were students and faculty in late nineteenth century colleges and accounts of several efforts to integrate the mathematical community in the mid twentieth century These stories indicate that though some efforts were more successful than others all of them were difficult The book concludes with a happier chapter about five black mathematicians in the early twenty first century The book also includes five interviews with leading Latin American mathematicians along with the results of a survey of Latino research mathematicians in the Southwest The author is a skilled story teller with good stories to tell This book is a page turner that all mathematicians as well as others concerned with equality should read It is a work of great interest and an enjoyable read
