The Origins of Agriculture David Rindos, 2013-10-22 The Origins of Agriculture An Evolutionary Perspective presents an alternative approach to understanding cultural variation and change It aims to demonstrate that domestication and the origin of agricultural systems are best understood by attempting to explicate the evolutionary forces that affected that development of domesticates and agricultural systems The book begins by discussing cultural change the domestication of plants and the origin of agricultural systems in the most general of terms It considers Darwinism in some depth concentrating on the relationship between natural selection and cultural change Subsequent chapters examine the world of domestication and agriculture and present a series of concepts that may permit a more natural explanation for these processes These include concepts such as incidental domestication specialized domestication and agricultural domestication The final two chapters present models for the origin and spread of agricultural systems based upon Darwinian evolutionary theory

The Origins of Human Diet and Medicine Timothy Johns, 1996-01-01 People have always been attracted to foods rich in calories fat and protein yet the biblical admonition that meat be eaten with bitter herbs suggests that unpalatable plants play an important role in our diet So called primitive peoples show a surprisingly sophisticated understanding of how their bodies interact with plant chemicals which may allow us to rediscover the origins of diet by retracing the paths of biology and culture The domestication of the potato serves as the focus of Timothy Johns's interdisciplinary study which forges a bold synthesis of ethnobotany and chemical ecology The Aymara of highland Bolivia have long used varieties of potato containing potentially toxic levels of glycoalkaloids and Johns proposes that such plants can be eaten without harm owing to human genetic modification and cultural manipulation Drawing on additional fieldwork in Africa he considers the evolution of the human use of plants the ways in which humans obtain foods from among the myriad poisonous and unpalatable plants in the environment and the consequences of this history for understanding the basis of the human diet A natural corollary to his investigation is the origin of medicine since the properties of plants that make them unpalatable and toxic are the same properties that make them useful pharmacologically As our species has adapted to the use of plants plants have become an essential part of our internal ecology Recovering the ancient wisdom regarding our interaction with the environment preserves a fundamental part of our human heritage

Huang, Akiko Aoyagi, 2014-06-22 The world's most comprehensive well documented and well illustrated book on this subject With extensive index 372 photographs and illustrations Free of charge in digital format on Google Books The Domestication and Exploitation of Plants and Animals G. W. Dimbleby, 2017-07-12 The domestication of plants and animals was one of the greatest steps forward taken by mankind Although it was first achieved long ago we still need to know what led to it and how and even when it took place Only when we have this understanding will we be able to appreciate fully the important social and economic consequences of this step Even more important an understanding of this achievement is basic to any insight into modern man's relationship to his habitat In the last decade or two a change in methods of investigating these events has taken place due to the mutual realization by archaeologists and natural scientists that each held part of the key and neither alone had the whole Inevitably perhaps the floodgate that was opened has resulted in a spate of new knowledge which is scattered in the form of specialist reports in diverse journals This volume results from presentations at the Institute of Archaeology London University discussing the domestication and exploitation of plants and animals Workers in the archaeological anthropological and biological fields attempted to bridge the gap between their respective disciplines through personal contact and discussion Modern techniques and the result of their application to the classical problems of domestication selection and spread of cereals and of cattle were discussed but so were comparable problems in plants and animals not previously considered in this context Although there were differing opinions on taxonomic classification the editors have standardized and simplified the usage throughout this book In particular they have omitted references to authorities and adopted the binomial classification for both botanical and zoological names They followed this procedure in all cases except where sub specific differences are discussed and also standardized orthography of sites **Hybrid** Noel Kingsbury, 2011-11-15 Noel Kingsbury reveals that even those imaginary perfect foods are themselves far from anything that could properly be called natural rather they represent the end of a millennia long history of selective breeding and hybridization Starting his story at the birth of agriculture Kingsbury traces the history of human attempts to make plants more reliable productive and nutritious a story that owes as much to accident and error as to innovation and experiment Drawing on historical and scientific accounts as well as a rich trove of anecdotes Kingsbury shows how scientists amateur breeders and countless anonymous farmers and gardeners slowly caused the evolutionary pressures of nature to be supplanted by those of human needs and thus led us from sparse wild grasses to succulent corn cobs and from mealy white wild carrots to the juicy vegetables we enjoy today At the same time Kingsbury reminds us that contemporary controversies

over the Green Revolution and genetically modified crops are not new plant breeding has always had a political dimension

Nature's Greatest Success Robert N. Spengler, 2025 The 15 000 year story of how grass seduced humanity into being its unwitting labor force and the science behind it Domesticated crops were not human creations and agriculture was not simply invented As Robert N Spengler shows domestication was the result of an evolutionary process in which people played a role only unwittingly and as actors in a numberless cast that spanned the plant and animal kingdoms Nature's Greatest Success is the first book to bring together recent scientific discoveries and fascinating ongoing research to provide a systematic account of not only how agriculture really developed but why Through fifteen chapters this book dives deep into the complex processes that drove domestication and the various roles that plants and animals including humans played in bringing about those changes At the intersection of popular history archaeology and evolutionary biology Nature's Greatest Success offers a revolutionary account of humanity not at the apex of nature but deeply embedded in the natural world and the evolutionary processes that continue to guide it even today **Population, Ecology, and Social Evolution** Steven Polgar, 2011-06-03

Smartt, 1990-04-19 This volume provides a wide ranging survey of all the major grain legumes *Biodiversity, Genetic Resources and Intellectual Property* Kamallesh Adhikari, Charles Lawson, 2018-03-09 There has been a deliberative but as yet unsuccessful attempt by scholars and policy makers to articulate a more meaningful idea of Europe which would enhance the legitimacy of the European Union and provide the basis for a European identity Using a detailed analysis of the writings of Nietzsche Elbe seeks to address this problem and argues that Nietzsche's thinking about Europe can significantly illuminate our understanding He demonstrates how Nietzsche's critique of nationalism and the notion of the good European can assist contemporary scholars in the quest for a vision of Europe and a definition of what it means to be a European citizen

Agricultural Ecology Joy Tivy, 2014-10-13 This book analyses the nature of the relationships between crops livestock and the bio physical environment and the extent to which man has managed and modified the products and environment to suit his/her own particular needs A Revolution in Eating James E. McWilliams, 2005-06-01 A colorful spirited tour of culinary attitudes tastes and techniques throughout colonial America Confronted by unfamiliar animals plants and landscapes settlers in the colonies and West Indies found new ways to produce food Integrating their British and European tastes with the demands and bounty of the rugged American environment early Americans developed a range of regional cuisines From the kitchen tables of typical Puritan families to Iroquois longhouses in the backcountry and slave kitchens on southern

plantations McWilliams portrays the grand variety and inventiveness that characterized colonial cuisine As colonial America grew so did its palate as interactions among European settlers Native Americans and African slaves created new dishes and attitudes about food McWilliams considers how Indian corn once thought by the colonists as fit for swine became a fixture in the colonial diet He also examines the ways in which African slaves influenced West Indian and American southern cuisine While a mania for all things British was a unifying feature of eighteenth century cuisine the colonies discovered a national beverage in domestically brewed beer which came to symbolize solidarity and loyalty to the patriotic cause in the Revolutionary era The beer and alcohol industry also instigated unprecedented trade among the colonies and further integrated colonial habits and tastes Victory in the American Revolution initiated a culinary declaration of independence prompting the antimonarchical habits of simplicity frugality and frontier ruggedness to define the cuisine of the United States a shift that imbued values that continue to shape the nation s attitudes to this day A lively and informative read TheNew Yorker Darwinism An Unconceivable Hypothesis , **The Microscopic and Chemical Parts of Plants** Thomas P. Hanna,1999 The plant s cells and their several specialized working subunits are examined in addition to chemical traits like color scent and the hormonal effects that turn leaves toward the light and allow other adaptations to the surroundings And the major processes driven by chemical changes over time that together are the life cycle of the plant are considered BOOK JACKET *Evolutionary Ethnobiology* Ulysses Paulino Albuquerque, Patrícia Muniz De Medeiros, Alejandro Casas,2015-09-23 Ethnobiology is a fascinating science To understand this vocation it needs to be studied under an evolutionary point of view that is very strong and significant although this aspect is often poorly approached in the literature This is the first book to compile and discuss information about evolutionary ethnobiology in English
