Ethical Judgment Abraham Edel, 1964 In *Ethical Judgment* Abraham Edel makes clear the part played by biological and social scientific information in ethical judgment and moral action using psychological anthropological and economic materials as well as historical studies Edel suggests that many controversies in ethical theory have emerged because different ethical theories made different scientific assumptions In the almost forty years since his book was first published life has become more complex and technological change has accelerated bringing changes to our morality and ethical theory as well as our conduct If anything his observations are even more pertinent compelling us to examine the empirical core of ethical statements Edel maintains that since our knowledge of social life and history is constantly growing moral theories and ethical judgments ought to embody the best knowledge available at any point in time However because all knowledge and belief is only probable there is never absolute certainty but only what Edel calls residual indeterminacy in human life and knowledge due to complexity and change Edel lists four factors that form the basis for moral decisions universal needs food perennial aspirations friendships central necessary conditions job security and critical contingent factors under special circumstances land reform in a landholder ruled society In his new introduction Edel applies those factors to the present day discussing societal changes over the past forty years such as the number of women in the workforce the impact of the civil rights movement and the fact that isolationism as a national policy is no longer feasible *Ethical Judgment* is a recognized classic in the modern study of ethical theory It will be valuable reading for sociologists historians and all scholars interested in the study of ethics and American culture

Scientism: Science, Ethics and Religion Mikael Stenmark, 2020-10-28 This title was first published in 2011 2001 The intellectual and practical successes of science have led some scientists to think that there are no real limits to the competence of science and no limits to what can be achieved in the name of science This view and similar views have been called Scientism In this book scientists views about science and its relationship to knowledge ethics and

religion are subjected to critical scrutiny A number of natural scientists have advocated Scientism in one form or another Francis Crick Richard Dawkins Carl Sagan and Edward O Wilson and their impact inside and outside the sciences is considered Clarifying what Scientism is this book proceeds to evaluate its key claims expounded in questions such as is it the case that science can tell us everything there is to know about reality Can science tell us how we morally ought to live and what the meaning of life is Can science in fact be our new religion Ought we become science believers The author addresses these and similar issues concluding that Scientism is not really science but disguised materialism or naturalism its advocates fail to see this not being sufficiently aware that their arguments presuppose the previous acceptance of certain extra scientific or philosophical beliefs
