**Science and Religion in the 19th Century** Cosslett,1984-01-19 Cambridge English Prose Texts consists of volumes devoted to substantial selections from non fictional English prose of the late sixteenth to the mid nineteenth centuries The series provides students primarily though not exclusively those of English literature with the opportunity of reading significant prose writers who for a variety of reasons not least their generally being unavailable in suitable editions are rarely studied but whose influence on their times was very considerable This volume contains selections from nineteenth century writers involved in the debate about the relation of science and religion It centres on the Darwinian controversy with extracts from *The Origin Of Species* and *The Descent of Man* and from opponents and supporters of Darwin This controversy is placed in the wider context of the earlier debates on geology and evolution the relation of science to Natural Theology the effect of Biblical Criticism on the interpretation of Genesis and the professionalisation of science by aggressively agnostic scientists

**Science and Religion in the Nineteenth Century** Tess Cosslett,1984      **Science and religion in the 19th century** T. Cosslett,1984      **Science and Religion in the 19th Century** Antonio Aliotta,1925      *Science and Religion in India* Renny Thomas,2021-12-30 This book provides an in depth ethnographic study of science and religion in the context of South Asia giving voice to Indian scientists and shedding valuable light on their engagement with religion Drawing on biographical autobiographical historical and ethnographic material the volume focuses on scientists religious life and practices and the variety of ways in which they express them Renny Thomas challenges the idea that science and religion in India are naturally connected and argues that the discussion has to go beyond binary models of conflict and complementarity By complicating the understanding of science and religion in India the book engages with new ways of looking at these categories

religion **Science and Religion** J.W. Fennema, Paul Iain, 2012-12-06 The world is increasingly becoming one. It is at the same time one endangered ecosystem and one thriving market place with material and spiritual goods on competitive display. And the good and evil things of life cannot easily be sorted out. The world is becoming one also in the sense that it is better understood today than it was in earlier times that the material good and the spiritual good though seemingly belonging to different realms of fact defined by their respective modes of existence together constitute effectively one and the same reality. The modern world of science, technology, computerized administration and power that calls upon humankind to struggle for a just participatory and sustainable society and to strive for a society of the future that will be the world over both long lived and worth living. The Second European Conference on Science and Religion held on 10-13th March 1988 on the campus of the Universiteit Twente Enschede The Netherlands was meant to be a modest market place a forum where standpoints and opinions could be presented and criticized. It was meant to offer an opportunity to meet and to make acquaintances in the expectation that the exchange of thoughts would lead to new conceptual horizons that would challenge what so far had been considered as hard fact or what until now had been looked upon as a distinctive feature of a well established view either of the kingdom of the sciences or of the realm of religion. **Science and Religion, 1450-1900** Richard Olson, 2004-10-30 Explores how religion its ideas attitudes practices and institutions interacted with science from the beginnings of the Scientific Revolution to the end of the nineteenth century. *Science and Religion* Alan Macfarlane, Mark Turin, 2021-09-30 Science and Religion Edwin Salpeter Owen Gingerich and John Polkinghorne is a collection of interviews being published as a book. These interviews have been conducted by one of England's leading social anthropologists and historians Professor Alan Macfarlane. Filmed over a period of 40 years the five conversations in this volume are part of Social Science Press's series Creative Lives and Works. These transcriptions also form a part of a larger set of interviews that cut across various disciplines from the social sciences the sciences and to the performing and visual arts. The current volume is on three foremost physicists and historians of science. Edwin Salpeter recounts rather dispassionately his departure from Austria to Australia to escape Nazi persecution. And in doing so broaches not only on the prevailing anti-Semitic sentiment of the time but takes the debate forward into the one between science and religion. Though he only touches upon it this debate finds resonance in the words of Owen Gingerich who belonged to the Mennonite dispensation and who has been rather vocal about the pro-Christian anti-creationist ideology. However it is John Polkinghorne who provides a deep insight into the ongoing debate on science and religion. Immensely riveting as conversations this collection reveals how intrinsically related science and religion are how pertinent it is to understand the workings of science in the context of religion. The book will be of enormous value not just to those interested in Astronomy and Cosmology as well as the History of Science but also to those with an inquisitive mind. Please note This title is co-published with Social Science Press New Delhi. Taylor Francis does not sell or distribute the Hardback in India Pakistan Nepal Bhutan Bangladesh and Sri Lanka. *Clashes of Knowledge* Peter

Meusburger, Michael Welker, Edgar Wunder, 2008-04-15 Do traditional distinctions between belief and knowledge still make sense How are differences between knowledge and belief understood in different cultural contexts This book explores conflicts between various types of knowledge especially between orthodox and heterodox knowledge systems ranging from religious fundamentalism to heresies within the scientific community itself Beyond addressing many fields in the academy the book discusses learned individuals interested in the often puzzling spatial and cultural disparities of knowledge and clashes of knowledge

**Science vs. Religion** Steve Fuller, 2013-04-24 For centuries science and religion have been portrayed as diametrically opposed In this provocative new book Steve Fuller examines the apparent clash between science and religion by focusing on the heated debates about evolution and intelligent design theory In so doing he claims that science vs religion is in fact a false dichotomy For Fuller supposedly intellectual disputes such as those between creationist and evolutionist accounts of life often disguise other institutionally driven conflicts such as the struggle between State and Church to be the source of legitimate authority in society Nowadays many conservative anti science groups support intelligent design theory but Fuller argues that the theory's theological roots are much more radical based on the idea that humans were created to fathom the divine plan perhaps even complete it He goes on to examine the unique political circumstances in the United States that make the emergence of intelligent design theory so controversial yet so persistent Finally he considers the long term prognosis arguing that the future remains very much undecided as society reopens the question of what it means to be human This book will appeal to all readers intrigued by the debates about creationism intelligent design and evolution especially those looking for an intellectually exciting confrontation with the politics and promise of intelligent design theory
