

A good scientist values criticism
almost higher than friendship: no,
in science criticism is the height
and measure of friendship.

Science Criticism:

Criticism and the History of Science Gunnar Andersson, 1994 Criticism and the History of Science deals with Thomas Kuhn's Imre Lakatos's and Paul Feyerabend's criticism of Karl Popper's falsificationist conception of science. It argues that this criticism is based on two important methodological problems: the problem that observations and best statements are fallible and impregnated with theory, and the problem of how to test complex theoretical systems. In order to solve these problems, it shows how problematic test statements can be criticised and whole theoretical systems falsified. In this way, the falsificationist conception of science is developed and defended in a way making a deeper understanding of science and its history possible.

Constructivism in Science Education Michael R. Matthews, 1998-02-28 Constructivism is one of the most influential theories in contemporary education and learning theory. It has had great influence in science education. The papers in this collection represent arguably the most sustained examination of the theoretical and philosophical foundations of constructivism yet published. Topics covered include orthodox epistemology and the philosophical traditions of constructivism; the relationship of epistemology to learning theory; the connection between philosophy and pedagogy in constructivist practice; the difference between radical and social constructivism and an appraisal of their epistemology; the strengths and weaknesses of the Strong Programme in the sociology of science and implications for science education. The book contains an extensive bibliography. Contributors include philosophers of science, philosophers of education, science educators, and cognitive scientists. The book is noteworthy for bringing this diverse range of disciplines together in the examination of a central educational topic.
