Engineering and Society: Working Towards Social Justice, Part I

Caroline Baillie, George Catalano, 2022-05-31 Engineers work in an increasingly complex entanglement of ideas people cultures technology systems and environments Today decisions made by engineers often have serious implications for not only their clients but for society as a whole and the natural world Such decisions may potentially influence cultures ways of living as well as alter ecosystems which are in delicate balance In order to make appropriate decisions and to co create ideas and innovations within and among the complex networks of communities which currently exist and are shaped by our decisions we need to regain our place as professionals to realise the significance of our work and to take responsibility in a much deeper sense Engineers must develop the ability to respond to emerging needs of all people across all cultures To do this requires insights and knowledge which are at present largely within the domain of the social and political sciences but which

need to be shared with our students in ways which are meaningful and relevant to engineering This book attempts to do just that In Part 1 Baillie introduces ideas associated with the ways in which engineers relate to the communities in which they work Drawing on scholarship from science and technology studies globalisation and development studies as well as work in science communication and dialogue this introductory text sets the scene for an engineering community which engages with the public In Part 2 Catalano frames the thinking processes necessary to create ethical and just decisions in engineering to understand the implications of our current decision making processes and think about ways in which we might adapt these to become more socially just in the future In Part 3 Baillie and Catalano have provided case studies of everyday issues such as water garbage and alarm clocks to help us consider how we might see through the lenses of our new knowledge from Parts 1 and 2 and apply this to our every day existence as engineers Table of Contents Introduction Engineering and Society

Canadian Plains Research Center, 2005 Proceedings of the Prairie Drought Workshop held May 27 28 2004 *Entropy Vector, The: Connecting Science And Business* Robert D Handscombe, Eann A Patterson, 2004-04-16 How do managers and entrepreneurs evaluate risk encourage creativity or manage change Might a better grasp of science help The authors of this book suggest that there is real value in trying to connect science to business and that science is far too important just to be left to the scientists All of science is too large a prospect so the authors limit themselves to looking at disorder We must all learn to manage and control change and there is plenty of social technical and business change going on The authors suggest that a clearer understanding of entropy and the choices it presents will assist in that management of change or as they put it to manage disorder one needs to control the entropy vector This book is for scientists and engineers aspiring to business success and for business people interested in new approaches **New Formulas for America's Workforce** , 2003 **The American Journal of Science** , 1926
