

SCIENCE in the SIXTIES

THE SIXTIES were a time of great change in the history of science. The decade was marked by a series of breakthroughs in the physical sciences, particularly in the fields of physics and chemistry. The discovery of the structure of DNA in 1953, the development of the first practical laser in 1960, and the discovery of the first superconducting materials in 1961 were just a few of the major achievements of the decade. In the biological sciences, the discovery of the structure of DNA and the development of the first practical methods for cloning and genetic engineering were also major achievements. The sixties were also a time of great change in the social sciences. The development of the first practical methods for the study of human behavior and the discovery of the first practical methods for the study of the mind were just a few of the major achievements of the decade. The sixties were a time of great change in the history of science, and the decade was marked by a series of breakthroughs in the physical sciences, biological sciences, and social sciences.
