Babich, 2013-06-29 perceptual essences that can be rendered directly manifest in perception with the help of theoretically structured instruments serving as readable technologies Scientific knowledge should thus be understood as an extension of unassisted perception A perceptual fact has an outer horizon which separates it from the ground on which it appears and an inner horizon composed of a multiplicity of possible perceptual profiles organized by an invariant essence The perceiving subject can bring forth a representative sample of the profiles in question occasionally by making use of certain technological processes which are themselves subject to interpretation in terms of theoretical representations The theoretical entities described in these representations are not simply detected thanks to an inferential operation but rather they are directly perceived It follows from this that the correspondence between the manifest image and the scientific image is not done one to one but by a many to one or one to many application between contextually defined perceptual objects within contexts that are mutually incompatible but complementary This should not however be understood as a form of conventionalism nor as a form of cultural relativism Pre comprehension which guides interpretation imposes strict limits to the descriptive categories which can be used and to the manner in which they can be linked to appropriate empirical objects The author applies his hermeneutic principles to the study of visual perception In fact this question is treated in the first part of the book

Tuomela, 2012-12-06 Were one to characterize the aims of this book ambitiously it could be said to sketch the philosophical foundations or underpinnings of the scientific world view or better of the scientific conception of the world In any case it develops a comprehensive philosophical view one which takes science seriously as the best method for getting to know the ontological aspects of the world This view is a kind of scientific realism causal internal realism as it is dubbed in the book This brand of realism is tough in matters of ontology but soft in matters of semantics and epistemology An ancestor of the book was published in Finnish under the title Tiede toiminta ja todellisuus Gaudeamus 1983 That book is a shortish undergraduate level monograph However as some research level chapters have been added the present book is perhaps best regarded as suited for more advanced readers I completed the book while my stay at the University of Wisconsin in Madison as a Visiting Professor under the Exchange Program between the Universities of Wisconsin and Helsinki I gratefully acknowledge this support I also wish to thank Juhani Saalo and Martti Kuokkanen for comments on the manuscript and for editorial help Dr Matti Sintonen translated the Finnish ancestor of this book into English to be used as a partial basis for this work His translation was supported by a grant from Suomalaisen kirjallisuuden edistämisyhteisö Finally and as usual I wish to
