## **Science Of Communication Its Phenomenological Foundation:**

**Science of Communication** Pilotta, Mickunas, Science of Communication Joseph J. Pilotta, Algis Mickunas, 1990 This book addresses the issues of communication from the vantage point of phenomenology or nonreductive awareness The authors contend that phenomenology and its various developments offer a depth of analyses of interrelated processes of awareness inclusive of language images gestures theoretical systems expressions and institutions without any explanatory speculations Written with the least technical terminology and yet without the sacrifice of phenomenological contributions to the science of communication the text presents the essential functions of awareness that would be relevant to any scientific research of communicative theory methodology and practice Interpretive Approaches to Interpersonal Communication Kathryn Carter, Mick Presnell, 1994-01-01 The authors fill two contemporary needs 1 they provide a collection of essays that raises theoretical and methodological issues in the study of interpersonal communication relevant to all researchers in this area of study and 2 they present a general approach to interpersonal communication that has gained wide acceptance among practitioners and educators but has been under represented by advanced research texts Towards Dialogue San van Eersel, **All About Science: Philosophy, History, Sociology & Communication** Lui Lam, Maria Burguete, 2014-10-15 There is a lot of confusion and misconception concerning science The nature and contents of science is an unsettled problem For example Thales of 2 600 years ago is recognized as the father of science but the word science was introduced only in the 14th century the definition of science is often avoided in books about philosophy of science This book aims to clear up all these confusions and present new developments in the philosophy history sociology and communication of science It also aims to showcase the achievement of China s top scholars in these areas The 18 chapters divided into five parts are written by prominent scholars including the Nobel laureate Robin Warren sociologist Harry Collins and physicist turned historian Dietrich Stauffer *The Husserlian Foundations of Science* Elisabeth Ströker, 2013-11-09 This book starts with a representation of Husserl s idea of phenomenology as a foundational theory of science The following essays elucidate the main features of the phenomenological method as worked out by Husserl in the course of the development of his philosophy starting from merely descriptive and going on to transcendental and constitutive phenomenology in order to get access to the foundations of knowledge in general and of scientific knowledge in particular Further essays deal with the Husserlian foundations of natural science and the relations between phenomenology and psychology as well as those between phenomenology and history This second revised and enlarged edition the first appeared in 1987 and was edited by Lee Hardy contains two further essays one deals with Husserl s never abandoned idea of phenomenology as a rigorous science and his further claim to restore phenomenological philosophy as First Philosophy and the other one on the problem of crisis of the Western culture Husserl was concerned with during several periods of his life demonstrates the actuality of his phenomenology even for philosophy of science in our times **Phenomenological Inquiry**, 1992 **Encyclopedia of**

**Rhetoric** Thomas O. Sloane, 2001 The Encyclopedia of Rhetoric is a comprehensive survey of the latest research as well as the foundational teachings in this broad field Featuring 150 original signed articles by leading scholars from many different fields of study it brings together knowledge from classics philosophy literature literary theory cultural studies speech and communications The Encyclopedia surveys basic concepts speaker style and audience elements genres terms fallacies figures of speech and the rhetoric of non Western cultures and cultural movements It covers rhetoric as the art of proof and persuasion as the language of public speech and communication and as a theoretical approach and critical tool used in the study of literature art and culture at large including new forms of communication such as the internet The Encyclopedia is the most wide ranging reference work of its kind combining theory history and practice with a special emphasis on public speaking performance and communication Cross references bibliographies after each article and synoptic and topical indexes further enhance the work Written for students teachers scholars and writers the Encyclopedia of Rhetoric is the definitive reference work on this powerful discipline

Hermeneutics and Its Problems Gustav Shpet, 2019-02-13 This book details a history of the methodology of textual interpretation from Ancient Greece to the 20th century It presents a complete English translation of Hermeneutics and Its Problems written by Russian philosopher Gustav Gustavovich Shpet along with insightful commentary Written in 1918 Shpet's text remained unpublished in its original Russian until the collapse of the Soviet Union This engaging translation will be of value to anyone interested in early phenomenology Russian intellectual history as well as the divergence of phenomenology and the analytic philosophy of language The volume also features translations of five key essays written by Shpet The first presents an extended elaboration of a non egological conception of consciousness on Husserlian grounds that considerably predates the well known arguments of early Sartre and Gurwitsch The second details the rudiments of a phenomenological philosophy of history that traces a central theme back to Parmenides The next two reveal Shpet's abiding philosophical interest in combating skepticism and what he took to be the reigning neo Kantian model by which philosophy is a handmaiden to mathematical physics The final one features a terse statement of Shpet's overall philosophical viewpoint written during the early years of the Stalinist period Shpet offers an example of one facet of philosophy from a phenomenological viewpoint demonstrating the progress as well as the deficiencies of successive eras along the historical journey In doing so he also gradually reveals the need for a theory of signs interpretation and understanding This collection brings together key documents for assessing Shpet's hermeneutic phenomenology and his perceived need to develop a phenomenological philosophy of language

*American Phenomenology* E.F. Kaelin, Calvin O. Schrag, 1988-12-31 THEODORE KISIEL Date of birth October 30 1930 Place of birth Brackenridge Pennsylvania Date of institution of highest degree PhD Duquesne University 1962 Academic appointments University of Dayton Canisius College Northwestern University Duquesne University Northern Illinois University I first left the university to pursue a career in metallurgical research and nuclear technology But I soon found myself drawn back to the university to round out an overly

specialized education It was along this path that I was waylaid into philosophy by teachers like H L Van Breda and Bernard Boelen The philosophy department at Duquesne University was then 1958 1962 a veritable little Louvain and the Belgian Dutch connection exposed me to among other visiting scholars Jean Ladriere and Joe Kockelmans who planted the seeds which eventually led me to the hybrid discipline of a hermeneutics of natural science and prompted me soon after graduation to make the first of numerous extended visits to Belgium and Germany The endeavor to learn French and German led me to the task of translating the phenomenological literature bearing especially on natural science and on Heidegger The talk in the sixties was of a continental divide in philosophy between Europe and the Anglo American world But in designing my courses in the philosophy of science I naturally gravitated to the works of Hanson Kuhn Polanyi and Toulmin without at first fully realizing why I felt such a strong kinship with them beyond their common anti positivism

### **The Body in Human**

**Inquiry** Vicente Berdayes, Luigi Esposito, John W. Murphy, 2004 The human body has recently emerged as a central concept of social theory Social scientists philosophers and scholars in other disciplines now routinely argue that abstract concepts such as class and gender should be understood by examining how they are expressed in the body s everyday practices Such an approach has humanized social theory by emphasizing the role that concretely situated human beings play in acting out or redefining social norms How will this emphasis on human embodiment transform methods of social inquiry The volume takes up this question by examining how the recognition of human embodiment entails reworking standard models of social research Individual chapters focus on such topics as communication theory ethics policy science globalization and cultural changes gerontology and pedagogical practice

### **The Dynamics of Persuasion**

Richard M. Perloff, 1993 Persuasion is one of the oldest fields of academic study it dates back thousands of years In our own era persuasion has been studied primarily by means of the theories and methods of social science research Numerous scholars have made contributions to our knowledge of persuasion and the field has generated a wealth of intriguing concepts and an impressive body of knowledge on persuasion processes and effects Persuasion is not simply a science however it is also an art Today there is a burgeoning persuasion industry that includes advertising sales public relations political consulting firms and a host of private and public companies that seek to change attitudes and influence social behaviors USE SECOND PARAGRAPH ONLY FOR GENERAL CATALOGS Written to enhance students understanding of persuasion theory and its applications to everyday situations this book presents an up to date review of persuasion theory and research Attempting to show students how these theories can deepen our understanding of how persuasion is practiced in a variety of real life situations it is designed as a text for undergraduate students who wish to know more about concepts of attitude and persuasion as well as introducing graduate students to theory and research in the field of persuasion With a broad look at persuasion research this volume examines psychological approaches to persuasion interpersonal communication theories and

the interface between persuasion and mass communication in particular mass media information campaigns It examines research on cognitive processing of persuasive messages compliance gaining in interpersonal contexts and the effects of large scale health communication campaigns     Information And Computation: Essays On Scientific And Philosophical Understanding Of Foundations Of Information And Computation Gordana Dodig-crnkovic, Mark Burgin, 2011-06-10

Information is a basic structure of the world while computation is a process of the dynamic change of information This book provides a cutting edge view of world s leading authorities in fields where information and computation play a central role It sketches the contours of the future landscape for the development of our understanding of information and computation their mutual relationship and the role in cognition informatics biology artificial intelligence and information technology This book is an utterly enjoyable and engaging read which gives readers an opportunity to understand and relate phenomena seemingly unrelated in a completely new light especially the connections between information computation cognition and life     *Social Science, Technical Systems, and Cooperative Work* Geoffrey Bowker, Susan Leigh Star, Les Gasser, William Turner, 2014-05-12

This book is the first to directly address the question of how to bridge what has been termed the great divide between the approaches of systems developers and those of social scientists to computer supported cooperative work a question that has been vigorously debated in the systems development literature Traditionally developers have been trained in formal methods and oriented to engineering and formal theoretical problems many social scientists in the CSCW field come from humanistic traditions in which results are reported in a narrative mode In spite of their differences in style the two groups have been cooperating more and more in the last decade as the people problems associated with computing become increasingly evident to everyone The authors have been encouraged to examine rigorously and in depth the theoretical basis of CSCW With contributions from field leaders in the United Kingdom France Scandinavia Mexico and the United States this volume offers an exciting overview of the cutting edge of research and theory It constitutes a solid foundation for the rapidly coalescing field of social informatics Divided into three parts this volume covers social theory design theory and the sociotechnical system with respect to CSCW The first set of chapters looks at ways of rethinking basic social categories with the development of distributed collaborative computing technology concepts of the group technology information user and text The next section concentrates more on the lessons that can be learned at the design stage given that one wants to build a CSCW system incorporating these insights what kind of work does one need to do and how is understanding of design affected The final part looks at the integration of social and technical in the operation of working sociotechnical systems Collectively the contributors make the argument that the social and technical are irremediably linked in practice and so the great divide not only should be a thing of the past it should never have existed in the first place     **Consciousness and**
