physics of the Science of Musical Sound from a preeminent scientist of the 20th century Those well versed in acoustics will discover wonderful illustrations and photographs depicting familiar concepts in new and enlightening ways The Science of Musical Sounds Dayton Clarence Miller,2015-02-26 From the INTRODUCTION WE are beings with several senses through which we come into direct relation with the world outside of ourselves Through two of these sight and hearing we are able to receive impressions from a distance and through these only do the fine arts appeal to us through sight we receive the arts of painting sculpture and architecture and through hearing the arts of poetry and music Undoubtedly music gives greater pleasure to more people than does any other art and probably this enjoyment is of a more subtle and pervading nature everyone enjoys music in some degree and many enjoy it supremely Sound is also of the greatest practical importance we rely upon it continually for the protection of our lives and through talking which is but making sounds according to formula we receive information and entertainment These facts give ample justification for studying the nature of sound the material out of which music and speech are made The study of sounds in language is as old as the human race and the art of music is older than tradition but the science of music is quite as modern as the other so called modern sciences Sound being comparatively a tangible phenomenon and so intimately associated with the very existence of every human being one would expect that if there are any unknown facts relating to it a large number of investigators would be at work trying to discover them There has been in the past as there is now a small number of enthusiastic workers in the field of acoustics who have accomplished much but it is no doubt true that this science has received less attention than it deserves and especially may this be said of the relation of acoustics to music *The Science of Musical Sounds* Dayton Clarence Miller,2015-06-14

Miller,2013-03-01 Bonded Leather binding The Structure of Musical Sound Charles Sperry

Willard Charles Sperry, Willard Charles Sperry, 2010 *The Structure of Musical Sound* is about science from the point of view of musical sound. It is also a book about musical sound from science's point of view. First and foremost, however, it is a science text for nonscientists. You, the reader, will be introduced to the methods of science and you will be shown how these methods are used to discover more about musical sound. You will be an active participant in both of these quests and as a result you will become a more scientific person than you might have realized possible. Parts of musical sound have scientific explanations. Examples of these parts include the rules for the formation and propagation of sound waves, the operation of musical instruments as they produce their sounds, and the acoustic conditions for good listening to musical sound in rooms and halls. *The Structure of Musical Sound* explains all of these scientific aspects of music. Questions are included throughout the book. They will challenge you to demonstrate your understanding of the ideas just presented. The solutions, not just the answers to these questions, are provided at the end of this book. *The Science of Musical Sounds* Dayton Clarence Miller, 1916 **SCIENCE OF MUSICAL SOUNDS** DAYTON CLARENCE. MILLER, 2018 **Musical Sound** Michael J. Moravcsik, 2001-12-31. This text has been out of print since 1990; it was originally published by Solomon Press in 1987. Several experts in the field have verified that the information in the book remains constant; nothing has or will change in the basic science of musical sound. It explains the science of musical sound without the encumbrance of detailed mathematics. It will appeal to music lovers as well as students of music and students of physics. It can easily be promoted with our physics program. **The Science of Musical Sound** William Ralph Bennett, 2008 **The Science Of Musical Sound** Miller, **Quantifying Music** H.F. Cohen, 2013-11-11. The soul rejoices in perceiving harmonious sound when the sound is not harmonious; it is grieved from these affects of the soul are derived the name of consonances for the harmonic proportions and the name of dissonances for the unharmonic proportions. When to this is added the other harmonic proportion which consists of the longer or shorter duration of musical sound, then the soul stirs the body to jumping, dance, the tongue to inspired speech according to the same laws. The artisans accommodate to these harmonies: the blows of their hammers, the soldiers their pace. As long as the harmonies endure, everything is alive; everything stiffens when they are disturbed. Thus the German astronomer Johannes Kepler evokes the power of music. Where does this power come from? What properties of music enable it to stir up emotions which may go far beyond just feeling generally pleased and which may express themselves for instance in weeping, in laughing, in trembling over the whole body in a marked acceleration of breathing and heartbeat, in participating in the rhythm with the head, the hands, the arms, and the feet? From the beginning of musical theory, the answer to this question has been sought in two different directions. *Musical Sound* Michael J. Moravcsik, 2014-01-15.
