Science, Process and Discovery Dennis Field, 1989 *Theories and Models in Scientific Processes* William E.

Herfel, Ilkka Niiniluoto, Władysław Krajewski, Ryszard Wójcicki, 2023-12-14 **The Scientific Process** S.D. Ross, 2012-12-06

Some preliminary observations must be made concerning the nature and purpose of this study What I have attempted here is an essay in the metaphysics of science and not the philosophy of science Rather than concentrating on the details of theory construction and the formal structure of scientific systems I have treated science as an enterprise a developing process within human experience I have used such an approach in order to analyze science in its relationship to other human enterprises such as art and philosophy and to clarify its unique goals and characteristics Often the concepts employed in descriptions of scientific methods are conceived too narrowly by broadening the focus of attention I have attempted to characterize in a fairly general fashion the goals and methods of science This has led to formulations which may seem at first glance to depart radically from some well established distinctions of the philosophy of science I hope that it will be clear however that such formulations arise at a different level of analysis and concern very different problems from those of the logic of science In particular I am concerned with the general goals of science These must not be confused with the narrower principles of method employed in science at any given time **Science after the Practice Turn in the Philosophy, History, and Social Studies of Science** Léna Soler, Sjoerd Zwart, Michael Lynch, Vincent Israel-Jost, 2014-03-21

In the 1980s philosophical historical and social studies of science underwent a change which later evolved into a turn to practice Analysts of science were asked to pay attention to scientific practices in meticulous detail and along multiple dimensions including the material social and psychological Following this turn the interest in scientific practices continued to increase and had an indelible influence in the various fields of science studies No doubt the practice turn changed our conceptions and approaches of science but what did it really teach us What does it mean to study scientific practices What are the general lessons implications and new challenges This volume explores questions about the practice turn using both case studies and theoretical analysis The case studies examine empirical and mathematical sciences including the engineering sciences The volume promotes interactions between acknowledged experts from different often thought of as conflicting orientations It presents contributions in conjunction with critical commentaries that put the theses and assumptions of the former in perspective Overall the book offers a unique and diverse range of perspectives on the meanings methods lessons and challenges associated with the practice turn Michel Meyer's Problematology Nick Turnbull, 2014-04-10

In today's society everything is in question The reflexive questioning of modernity has fundamentally problematized society including philosophy which has experienced a crisis of metaphysics Michel Meyer's problematology answers this crisis by questioning questioning unfolding a new way of doing philosophy with special relevance for the study of society In this first ever extended treatment of Meyer's work Nick Turnbull examines the main features of problematology including the principle of

questioning and the deduction of an original conception of difference based on the question answer relationship Turnbull shows how these concepts produce new perspectives in the philosophy of the emotions history meaning politics rhetoric and science He applies Meyer s ideas to key questions in the philosophy of social science showing how problematology offers important insights for understanding contemporary society The book compares problematology with the work of well known thinkers including Bourdieu Castoriadis Collingwood Derrida Dewey Gadamer Heidegger and Lyotard Turnbull uses problematology and rhetoric to explain how meaning is constructed through practice in the negotiation of social distance
