O'Sullivan, 2012-09-24 This book offers a series of critical commentaries on and forced encounters between different thinkers At stake in this philosophical and psychoanalytical enquiry is the drawing of a series of diagrams of the finite infinite relation and the mapping out of the contours for a speculative and pragmatic production of subjectivity      **Self and Subjectivity in Social Research** Donna Maria Thomas, Sarah Durston, 2025-04-16 This is a book that thinks about what it means to be human and what this could mean for social research Addressing ontological shifts across the social sciences the book reconsiders the nature of self experience and social reality and their implications for doing research differently It delves into wide ranging topics from the self in crisis through the self and the nature of language to ethics and the self The book also Helps you understand epistemology and ontology in practice with case studies of real world research Critiques dominant approaches and examines global perspectives and contexts that challenge them Explores the potential of interdisciplinary approaches to resolve tensions in social research Discusses how ontology can shape research practice policy development and social support systems This book will help postgraduate students academics researchers and teachers embrace new ways of thinking about self and subjectivity Donna M Thomas is a Research Fellow at the University of Central Lancashire and Co director of ICreateS International Research Unit Research Sarah Durston is head of the Sentience and Science Foundation the Netherlands honorary professor at UCLan and co director of the ICreateS research unit and professor in developmental neuroscience at Utrecht University the Netherlands      **The Science of Subjectivity** J. Neisser, 2015-04-02 Can neuroscience help explain the first person perspective The Science of Subjectivity delves into the nature of experience arguing that unconscious subjectivity is a reality Neisser identifies the biological roots of the first person showing how ancient systems of animal navigation enable creatures like us to cope with our worldly concerns      Memory, Consciousness and Temporality Gianfranco Dalla Barba, 2001-09-30 Memory Consciousness and Temporality presents the argument that current memory theories are undermined by two false assumptions the memory trace paradox and the fallacy of the homunculus In these pages Gianfranco Dalla Barba introduces a hypothesis the Memory Consciousness and Temporality MCT hypothesis on the relationship between memory and consciousness that is not undermined by these assumptions and further demonstrates how MCT can account for a variety of memory disorders and phenomena With a unique approach intended to conjugate phenomenological analysis and recent neuropsychological data the author makes an important contribution to our understanding of the central issues in current cognitive science and cognitive neuroscience      Lacan's Four Fundamental Concepts of Psychoanalysis Roberto Harari, 2020-09-08 The informal tone of these ten lectures by Roberto Harari reflects their original character as classes held at El Centro de Extension Psicoanalitica del Centro Cultural General San Martin

Buenos Aires Destined for a wider audience than just the psychoanalytical camp Harari's work presents the Lacanian endeavor without presupposition of specialized knowledge and yet without conceding intellectual subtlety Harari provides an introductory display of essential themes developed in Lacan's Four Fundamental Concepts of Psychoanalysis and offers his own insightful reading of the text's central ideas These ten classes sparked by the crucial Seminar XI within the teaching of Lacan reframe a wide range of questions in psychoanalysis for the professional in the field scholars and students across disciplines and interested lay readers Harari is so at ease with Lacan's oeuvre that he can dismantle and rebuild its structure so that order and logic suddenly appear inherent to Lacan's way of thinking The unconscious transference repetition and the drive are here reintroduced not only to do justice to Freud's insights but also to link these concepts to the larger question of the complex relationships between psychoanalysis religion and science Harari's didactic approach and his analytic style come together to bring us one step closer to understanding Lacan and one step closer to understanding ourselves **Towards**

**The Inventive Scientist** Pasquale De Marco, 2025-03-10 In this thought provoking book the authors explore the complex and often paradoxical relationship between subjectivity and science They argue that subjectivity is not only an unavoidable part of science but that it can also be a valuable asset Through a series of fascinating historical examples the authors show how subjective factors have played a role in some of the greatest scientific discoveries from the work of Johannes Kepler and Charles Darwin to Albert Einstein and Marie Curie They also discuss the Bayesian approach to

statistical analysis which provides a framework for incorporating subjective beliefs and prior knowledge into scientific inference The authors also acknowledge the potential pitfalls of subjectivity such as bias error and even fraud They argue that it is important for scientists to be aware of these risks and to take steps to mitigate them This book is a comprehensive and thought provoking exploration of the role of subjectivity in science It is essential reading for anyone interested in the history philosophy and methodology of science as well as anyone who wants to understand the complex relationship between science and human subjectivity Here are some key features of the book Explores the historical philosophical and methodological aspects of subjectivity in science Provides a comprehensive overview of the Bayesian approach to statistical analysis Discusses the implications of subjectivity for scientific progress and the future of science Written in an engaging and accessible style suitable for a wide range of readers This book is a valuable resource for scientists philosophers historians and anyone else who is interested in the relationship between science and human subjectivity If you like this book write a review

Bozza,Alex Biedermann,Paolo Garbolino,Colin Aitken,2010-03-19 This is the first text to examine the use of statistical methods in forensic science and bayesian statistics in combination The book is split into two parts Part One concentrates on the philosophies of statistical inference Chapter One examines the differences between the frequentist the likelihood and the Bayesian perspectives before Chapter Two explores the Bayesian decision theoretic perspective further and looks at the benefits it carries Part Two then introduces the reader to the practical aspects involved the application interpretation summary and presentation of data analyses are all examined from a Bayesian decision theoretic perspective A wide range of statistical methods essential in the analysis of forensic scientific data is explored These include the comparison of allele proportions in populations the comparison of means the choice of sampling size and the discrimination of items of evidence of unknown origin into predefined populations Throughout this practical appraisal there are a wide variety of examples taken from the routine work of forensic scientists These applications are demonstrated in the ever more popular R language The reader is taken through these applied examples in a step by step approach discussing the methods at each stage
