## **Science Agriculture And Research A Compromised Participation:**

**Science, Agriculture and Research** William Buhler, 2002 First Published in 2002 Routledge is an imprint of Taylor Francis an informa company

**Science, Agriculture and Research**, 2001

**Science Agriculture and Research** Susannah Bolton, Eddie Arthur, William Buhler, Stephen Morse, Judy Mann, 2012-05-23 Research is never free of pressures and constraints and to understand its results properly these have to be assessed and analyzed In agriculture research into biotechnology and GMOs as well as pesticides and herbicides is big business agribusiness This book looks at the crucial roles of funding and the political context on the research agenda and its results in agricultural development It provides a critical evaluation of the participatory methods now widely used and explores the ways in which research into biotechnology have reflected the interests of the various parties involved

*Measuring Sustainability* Simon Bell, Stephen Morse, 2013-06-17 Measuring the sustainability of development is crucial to achieving it and is one of the most actively studied issues in the area To date most studies of measurements or indicators have been largely theoretical However this book a follow on to Bell and Morse s highly influential Sustainability Indicators 1999 presents valuable practical advice on how to develop measurements that will work in real life development contexts It describes and analyses how to derive validate and apply indicators in the course of an actual development project in this case the Mediterranean Action Plan in Malta The authors explain the trade offs and constraints involved and how it is possible to combine the open ended and flexible perspectives of sustainability with the more linear processes and fixed targets of specific projects through the use of pragmatic and reflective methodologies

Opening Up Knowledge Production Through Participatory Research? Jakob Rupert Friederichsen, 2009 Originally presented as the author s thesis doctoral University of Hohenheim 2008

**Study on impacts of farmer-led research supported by civil society organizations** Wettasinha, C., Waters-Bayer, A., van Veldhuizen, L., Quiroga, G., Swaans, K., 2015-01-15 Decades of scientific research related to agriculture and natural resource management have brought limited benefits to smallholder farmers including crop farmers fishers livestock keepers and other resource users Therefore donors policymakers and civil society organizations CSOs such as farmer organizations and nongovernmental organizations NGOs are urging the formal research sector to make its work more useful to smallholder farmers Many institutions of agricultural research and development are now seeking ways to engage more closely with smallholders in order to conduct research that is more relevant for and accessible to them and are seeking examples and good practices as sources of learning Some examples of research that is focused on smallholders and in which the process is co managed and driven by smallholders can be found in informal research initiatives specifically those which are facilitated by CSOs The purpose of this study was to identify such examples of informal agricultural research and development that could be documented and thus made accessible to formal researchers This report also describes farmer led research findings and their dissemination and analyzes available evidence on the impact of farmer led approaches to agricultural research and

development on rural livelihoods local capacity to innovate and adapt and influence on governmental institutions of agricultural research and development

**Ethics and the politics of food** Matthias Kaiser, Marianne Elisabeth Lien, 2023-08-28 Food has emerged as a political topic par excellence It is increasingly involved in controversies at a transnational level in relation to issues of access dominance trade and control in a shared global environment At the same time innovations in biotechnology and animal domestication have brought ethics to the forefront of food debates Thus we live in an era when the ethics and the politics of food must come together This book addresses the ethics and the politics of food from a broad range of academic disciplines including sociology philosophy nutrition anthropology ethics political science and history The chapters expose novel problem areas and suggest guidelines for approaching them Topics range from fundamental issues in philosophy to sustainability from consumer trust in food to ethical toolkits Transparency power and responsibility are key concerns and special attention is given to animal welfare emerging technologies in food production and marine domestication Together the chapters represent a wide range of academic responses to the fundamental dilemmas posed by food production and food consumption in the contemporary world

Genetically Modified Organisms in Crop Production and Their Effects on the Environment Kakoli Ghosh, Paul C. Jepson, 2006-01-01 The Food and Agriculture Organization FAO hosted an Expert Consultation on Genetically Modified Organisms in Crop Production and Their Effects on the Environment Methodologies for Monitoring and the Way Ahead from 18 to 20 January in Rome The main objective of the consultation was to review the scientific basis for and procedures to establish effective post release monitoring of genetically modified GM crops and develop guidelines to strengthen member countries capacities to design and carry out monitoring programmes The consultation was a follow up to the earlier FAO Expert Consultation on Environmental Effects of Genetically Modified Crops which had recommended the environmental effects of GM crops be assessed on a case by case basis and emphasized the need to monitor possible medium to long term environmental impacts The main outputs of the meeting were a review of the scientific criteria and procedures strategies that could form the basis of efficient monitoring programmes recommendations for both scientists managing the monitoring process and policy makers

*Negotiated Learning* Irene Guijt, 2010-09-30 The first book to critically examine how monitoring can be an effective tool in participatory resource management *Negotiated Learning* draws on the first hand experiences of researchers and development professionals in eleven countries in Africa Asia and South America Collective monitoring shifts the emphasis of development and conservation professionals from externally defined programs to a locally relevant process It focuses on community participation in the selection of the indicators to be monitored as well as community participation in the learning and application of knowledge from the data that is collected As with other aspects of collaborative management collaborative monitoring emphasizes building local capacity so that communities can gradually assume full responsibility for the management of their resources The cases in *Negotiated Learning* highlight best practices but stress that collaborative monitoring is a relatively new area of

theory and practice The cases focus on four themes the challenge of data driven monitoring in forest systems that supply multiple products and serve diverse functions and stakeholders the importance of building upon existing dialogue and learning systems the need to better understand social and political differences among local users and other stakeholders and the need to ensure the continuing adaptiveness of monitoring systems **The Second Colonial Occupation** Bekeh

Utietiang Ukelina,2017-07-28 In this insightful book development historian Bekeh Utietiang Ukelina addresses the crisis of development in Africa by locating it in its colonial historical past Using Nigeria as a case study he argues that the nature and practice of British colonialism in this colony created social and economic deficiencies that have left a legacy of underdevelopment Ukelina outlines the processes that led to the 1945 Nigerian Development Plan and the evolution of colonial agricultural policy and practices in Nigeria He argues that a few key factors led to the failure of development in the late colonial period the imperial and neocolonial imperative to exploit African resources and people poor planning as a result of this imperative and the racial ideologies of the colonial state that resulted in a total rejection of local African experience and knowledge in favor of Western experts The Second Colonial Occupation uncovers and analyzes the short and long term impact of colonialism It reveals that though colonial rule was promoted as a benevolent mission at heart it was a system that guaranteed that Africans continuously paid for their own exploitation Ukelina argues that postcolonial Africa will continue to face development challenges unless it breaks free from the intellectual relics of colonial rule and the economic shackles of neocolonialism Ethical and Socially Responsible Investment Dominic Broadhurt,Janette Watson,Jane Marshall,2005-05-15

but the potential of new technologies has frequently bypassed the poorest people and the poorest countries In *Science and Technology for Development* James Smith explores the complex relationship between society and technology and the potential for science to make sustainable contributions to global development Drawing on case studies from Africa Latin America and Asia the author argues that we need to think carefully about science and development otherwise the perpetual promise of future technological breakthroughs may simply work to distance meaningful development from the present This book is essential reading for all students of development      *Agroecology and Strategies for Climate Change* Eric Lichtfouse,2011-09-30 Sustainable agriculture is a rapidly growing field aiming at producing food and energy in a sustainable way for our children This discipline addresses current issues such as climate change increasing food and fuel prices starvation obesity water pollution soil erosion fertility loss pest control and biodiversity depletion Novel solutions are proposed based on integrated knowledge from agronomy soil science molecular biology chemistry toxicology ecology economy philosophy and social sciences As actual society issues are now intertwined sustainable agriculture will bring solutions to build a safer world This book series analyzes current agricultural issues and proposes alternative solutions consequently helping all scientists decision makers professors farmers and politicians wishing to build safe agriculture energy and food systems for future generations      Ideas for Development Robert Chambers,2013-06-17 The many ideas and opportunities include narrowing the gaps between words and actions reducing demands on administrative capacity using minimum rules non negotiables and downward accountability to transform power relations finding new potentials for participation improving scaling up critical reflection and experiential learning complementing rights based with obligations based approaches pro poor realism and responsible well being      **Knowledge, Policy and Power in International Development** Harry Jones,Nicola A. Jones,2012 It offers a power analysis perspective on the knowledge policy process illustrated with rich empirical examples from the field of international development      **Indices and Indicators in Development** Stephen Morse,2013 The use of numbers to condense complex systems into easily digested bites of information is very much in fashion At one level they are intended to enhance transparency accountability and local democracy while at another they provide a means of enhancing performance However all indicators suffer from the same basic problem that ironically is also their biggest advantage condensing something highly complex into a few simple numbers Love them or hate them there is no denying that people use indicators to make decisions *Indices and Indicators* explores the use of indicators within the field of human development Part I provides a brief outline of the contested meaning of development and how indices and indicators have been used as means of testing the realization of these development visions in practice in a range of institutional contexts Part II discusses the limitations of such indices and indicators and illustrates how they are dependent upon the vision of development adopted The book also suggests how indices and indicators can best be employed and presented Given our overwhelming reliance on indices and indicators for measuring progress directing

policy and allocating resources this book is essential core reading for academics undergraduate and post graduate students in social science economics geography and development studies as well as development practitioners policy makers and donor and international funding agencies
