Science And Ecosystem Management:

Science and Ecosystem Management in the National Parks William L. Halvorson, Gary E. Davis, 2023-01-10 Our national parks are more than mere recreational destinations They are repositories of the nation s biological diversity and contain some of the last ecosystem remnants needed as standards to set reasonable goals for sustainable development throughout the land Nevertheless public pressure for recreation has largely precluded adequate research and resource monitoring in national parks and ignorance of ecosystem structure and function in parks has led to costly mistakes such as predator control and fire suppression that continue to threaten parks today This volume demonstrates the value of ecological knowledge in protecting parks and shows how modest investments in knowledge of park ecosystems can pay handsome dividends Science and Ecosystem Management in the National Parks presents twelve case studies of long term research conducted in and around national parks that address major natural resource issues These cases demonstrate how the use of longer time scales strongly influence our understanding of ecosystems and how interpretations of short term patterns in nature often change when viewed in the context of long term data sets Most importantly they show conclusively that scientific research significantly reduces uncertainty and improves resource management decisions Chosen by scientists and senior park managers the cases offer a broad range of topics including air quality at Grand Canyon interaction between moose and wolf populations on Isle Royale control of exotic species in Hawaiian parks simulation of natural fire in the parks of the Sierra Nevada and the impact of urban expansion on Saguaro National Monument Because national parks are increasingly beset with conflicting views of their management the need for knowledge of park ecosystems becomes even more critical not only for the parks themselves but for what they can tell us about survival in the rest of our world This book demonstrates to policymakers and managers that decisions based on knowledge of ecosystems are more enduring and cost effective than decisions derived from uninformed consensus It also provides scientists with models for designing research to meet threats to our most precious natural resources If we can learn to save the parks observe Halvorson and Davis perhaps we can learn to save the world

Knight, Dennis Schenborn, 2012-08-31 Today's natural resource managers must be able to navigate among the complicated interactions and conflicting interests of diverse stakeholders and decisionmakers Technical and scientific knowledge though necessary are not sufficient Science is merely one component in a multifaceted world of decision making And while the demands of resource management have changed greatly natural resource education and textbooks have not Until now Ecosystem Management represents a different kind of textbook for a different kind of course It offers a new and exciting approach that engages students in active problem solving by using detailed landscape scenarios that reflect the complex issues and conflicting interests that face today's resource managers and scientists Focusing on the application of the sciences of ecology and conservation biology to real world concerns it emphasizes the intricate ecological socioeconomic and institutional matrix in which natural resource management functions and illustrates how to be more effective in that challenging arena Each chapter is rich with exercises to help facilitate problem based learning The main text is supplemented by boxes and figures that provide examples perspectives definitions summaries and learning tools along with a variety of essays written by practitioners with on the ground experience in applying the principles of ecosystem management Accompanying the textbook is an instructor's manual that provides a detailed overview of the book and specific guidance on

designing a course around it Download the manual here Ecosystem Management grew out of a training course developed and presented by the authors for the U S Fish and Wildlife Service at its National Training Center in Shepherdstown West Virginia In 20 offerings to more than 600 natural resource professionals the authors learned a great deal about what is needed to function successfully as a professional resource manager The book offers important insights and a unique perspective dervied from that invaluable experience
