in the last quarter of the nineteenth century Starting in the 1970s such a conception was too simplistic and not at all accurate when considering the totality of that relationship This volume evaluates the utility of the complexity principle in past present and future scholarship First put forward by historian John Brooke over twenty five years ago the complexity principle rejects the idea of a single thesis of conflict or harmony or integration or separation between science and religion Rethinking History Science and Religion brings together an interdisciplinary group of scholars at the forefront of their fields to consider whether new approaches to the study of science and culture such as recent developments in research on science and the history of publishing the global history of science the geographical examination of space and place and science and media have cast doubt on the complexity thesis or if it remains a serviceable historiographical model

**Galileo Goes to Jail and Other Myths about Science and Religion** Ronald L. Numbers, 2010-11-08 Ronald Numbers has recruited the leading scholars in this new history of science to puncture the myths from Galileo's

incarceration to Darwin's deathbed conversion to Einstein's belief in a personal God who didn't play dice with the universe. Each chapter in *Galileo Goes to Jail* shows how much we have to gain by seeing beyond the myths. *Truth Matters* John G. Trapani, 2004. Drawing upon the richness and breadth of Jacques Maritain's thought, the contributors to this volume engage readers with philosophical essays about the search for truth in human life and civic engagement. The essays examine a broad range of topics from those that are more properly theoretical such as God, science, natural law, practical reason, education, and democracy to those that are more practical such as capital punishment, eugenics, friendship, love, and art. In each essay, the author implicitly challenges the claims of relativism and postmodernism, specifically the idea that there is no real truth and that what matters is merely the perspective of one's own frame of reference. The essays argue instead that theoretical truth claims have practical consequences that truth matters to those who are affected by it. In addition to the editor, the contributors are Gavin T. Colver, John A. D. Cuddeback, Raymond Dennehy, Bernard E. Doering, Desmond J. FitzGerald, Sarah J. Fodor, William J. Fossati, W. Matthews Grant, James G. Hanink, Katie Hollenberg, Gregory Kerr, James P. Mesa, Peter Pagan, Matthew S. Pugh, James V. Schall, S. J. Michael D. Torre, John R. Traffas, Cornelia A. Tsakiridou, Timothy S. Valentine, S. J. A. Leo White, Anne M. Wiles, and Henk E. S. Woldring. John G. Trapani Jr. is Professor of Philosophy and Chair of the Humanities Division at Walsh University in North Canton, Ohio.

**International Perspectives on Science, Culture, and Belief** Fern Elsdon-Baker, Stephen H. Jones, James Riley, 2025-08-26. Public understanding of the relationship between science and religion is dominated by US and UK perspectives and research that has been carried out in Western Protestant Anglophone contexts. This has enabled a culturally specific narrative of conflict to dominate public discussions of evolution, science, and religion, obscuring the varied cultural contexts and complexities within which engagement with science takes place and the growing influence of non-religious identities and diverse forms of spirituality. Representing one of the most wide-ranging and original contributions to the emerging body of research on the relationship between religion, non-religion, and science in society, this innovative and timely collection revisits challenges and rethinks longstanding assumptions by decentring positions and perspectives that have until recently dominated discussions of science and belief. Drawing on almost a decade of multidisciplinary research, *International Perspectives on Science, Culture, and Belief: From Complexity to Globality* brings together incisive global perspectives exploring the social and cultural drivers of the relationships between evolutionary science and belief. Highlighting the natures and varieties of the interrelation between science and belief globally, this volume addresses the relationships between science, culture, and belief from multiple disciplines, methodologies, and geographical contexts, including South Asia, Latin America, Africa, and Australia, as well as Europe and North America. This work has particular relevance in the increasingly polarised post-pandemic world, shining a light for the first time on the multifaceted interplay between social identities and cultural narratives in debates that are often about far more than the science.
