Science and Technology Planning and Policy Feruccio Bilich,1989 The purpose of this book is to discuss the various concepts techniques models and methodologies that will allow focused planning of science and technology policy from a system s point of view i e taking into consideration all the relevant aspects It fulfills a gap in the existing literature on science and technology because it explains why when and how to carry out the planning process in a methodological and analytical manner Science and technology strategies and policies are discussed within a conceptual framework and their impact both in global terms and in specific terms when analysing industrialized market economies centrally planned economies semi industrialized economies and developing economies The book reveals how to identify compare and design scientific and technological strategies and policies to be carried out by a planner decision maker organization country etc It contains not only the description of the important aspects of the scientific and technological system of different countries but also presents several measures and data permitting the analysis and comparison of the scientific and technological strategies and policies for these countries Oceans Governance in the Twenty-first Century Marcus G. Haward,Joanna Vince,2008-01-01 This book is recommended for anyone wanting to quickly get up to speed with oceans governance bearing in mind at this stage it is an immature and quickly developing field The strength of the book is that it is grounded in real world examples from four case study countries and in this context at the very least exposes the reader to emergent oceans governance and policy issues an excellent starting point for further analysis of oceans governance and sets up a research agenda for the future Murray Patterson *Journal of Ecological Economics* The India Handbook C. Steven LaRue,2013-10-23 First Published in 1998 Routledge is an imprint of Taylor Francis an informa company **China's Medium and Long-Term Science and Technology Program** Zhenghong Chen,2021-08-28 This book conducts a panoramic study on the history of China s Science and Technology which focuses on the Medium and Long Term Science and Technology Program MLSTP In general these Programs have a duration of 5 30 year This book provides an epochal assessment of the project s conceptual context over the past 60 years The author shows that the historical evolution and

conceptual development of China's MLSTP are the result of an amalgamation of political economic and social factors within distinct contemporary contexts. As a national action plan, MLSTP has incorporated many of the factors that go beyond the intentional factors of science and technology. MLSTP is not only a macro vision and blueprint for scientific and technological development; it is also a political act of realizing the national will. While ensuring the MLSTP builds on its great achievements, the author also reflects upon its deficiencies and disadvantages in order to better promote the advancement of science and technology in China. This book comprehensively lays out the historical and theoretical dimensions. Based on a clear vision of historical constructivism, the author has compiled the MLSTP philosophy of different eras into a conceptual framework for this era and used this framework to research and analyze the historical and conceptual evolution of MLSTP. Research on MLSTP is important for an enrichment of contemporary studies in the history of science and the science and technology policy. In 2010, more than 60 years after the establishment of the People's Republic of China, the country had enacted 10 MLSTP programs. This book separates the development of the MLSTP into three different historical eras: the era of economic planning, the era of economic transformation, and the new century. Each historical epoch corresponds to a different MLSTP philosophy concept which enables us to study the conceptual evolution of MLSTP using historical research as our foundation.

Technological Transformation in the Third World: Volume 3 Surendra J. Patel, 2018-03-26. Originally published in 1993, this book contains 3 studies from Latin America: Mexico, Puerto Rico, and Venezuela. These studies bring out sharply the processes at work in Latin America between 1950 and 1980, which were responsible for the crisis that the continent faced in the 1980s. In each case, there was a striking failure in building up national technological capability so that the country could grapple with the problems it faced. **Special Reference Briefs**, 1983. Institutional and Technological Change in Japan's Economy Janet Hunter, Cornelia Storz, 2006-06-28. Institutional and technological change is a highly topical subject. At the theoretical level, there is much debate in the field of institutional economics about the role of technological change in endogenous growth theory. At a practical policy level, arguments rage about how Japan and the Japanese economy should plan for the future. In this book, leading economists and economic historians of Japan examine a range of key issues concerning institutional and technological change in Japan, rigorously using discipline-based tools of analysis and drawing important conclusions as to how the process of change in these areas actually works. In applying these ideas to Japan, the writers in this volume are focusing on an issue which is currently being much debated in the country itself and are helping our understanding of the world's second largest economy. Rethinking Scholarly Communication in China Liu Zhongbo, 2024-09-02. This book examines science and technology policies in China over time and explores the development of scholarly communication through the lens of the political economy of communication. Despite political censorship and restrictions on the production of academic knowledge in China, the number of scholarly publications has skyrocketed over the past 20 years. By explaining these seemingly contradictory phenomena, this study provides insight into the complex landscape

of scholarly communication in China shaped by the government in collaboration with commercial publishers The book examines the dynamic relationship between the state and the market including their key players which determines the production and dissemination of academic knowledge From a political economy perspective it investigates how the academic governance complex a system that intertwines communication politics and economics has been established in China It then discusses the impact of this system on the production of academic knowledge in the country The title will serve as a key reference for academics researchers and students interested in the intersection of communication studies librarianship and political science particularly those focusing on China s academic knowledge production and scholarly communication
