Introduction to Chapter 2

In its widest application science policy is concerned with education, the stock of knowledge, its availability and use, and research and development. Technology policy is concerned with the adoption and use of techniques – innovation, diffusion of techniques and their replacement. As is indicated in Table 2.1, however, the borderline between the two policy types is not clear-cut.

Division between the areas and variables of science policy and technology policy are not watertight. Education and the stock of knowledge, for instance, play an important role in influencing the rate of innovation and diffusion of new technology. Again, all elements in the left-hand column of Table 2.1 influence those in the right-hand column and there is interdependence between variables in the left-hand column.

This chapter concentrates on the areas of science policy listed in the first column of Table 2.1 and the next chapter on technology policy reviews those areas listed in the second column. The aim is to cover these areas broadly.

Science And Technology Policy Priorities Of Governments:

Science and Technology Policy F. Tisdell, 2012-12-06 I was asked recently to prepare an independent background report on the subject of priority assessment in science and technology policy for the Australian Science and Technology Council The Council while not necessarily endorsing this book suggested that a wider audience could be interested in the type of material contained in my report and kindly gave me permission to publish the material in my own right The present book contains this and other material some of which was presented at a seminar on National Science Policy Implications for Government Departments arranged by the Department of Science and the Environment Additional ideas were developed in response to comments on the manuscript by referees as a result of discussions with Professor John Metcalfe and Dr Peter Stubbs of Manchester University a conversation with Dr Keith Hartley of the University of York and in the wake of a communication from Dr Ken Tucker Assistant Director Bureau of Industry Economics Australia Science and technology policy affects and concerns everyone of us if for no other reason than we cannot escape in this interdependent world from the economic social and environmental overs pills generated by science and technology We must face the problems and promises inherent in new and existing science and technology whether we like it or not Not surprisingly this book finds that all industrialized countries seem to be facing similar economic and social problems Monthly Catalog of United States Government Publications

it possible for farmers or entrepreneurs to use the innovations While consensus is developing about what is meant by innovation and innovation system no detailed blueprint exists for making agricultural innovation happen at a given time in a given place for a given result The AIS approach that looks at these multiple conditions and relationships that promote innovation in agriculture has however moved from a concept to a sub discipline with principles of analysis and action AIS investments must be specific to the context responding to the stage of development in a particular country and agricultural sector especially the AIS This sourcebook contributes to identifying designing and implementing the investments approaches and complementary interventions that appear most likely to strengthen AIS and to promote agricultural innovation and equitable growth It emphasizes the lessons learned benefits and impacts implementation issues and prospects for replicating or expanding successful practices The information in this sourcebook derives from approaches that have been tested at different scales in different contexts It reflects the experiences and evolving understanding of numerous individuals and organizations concerned with agricultural innovation including the World Bank This information is targeted to the key operational staff in international and regional development agencies and national governments who design and implement lending projects and to the practitioners who design thematic programs and technical assistance packages The sourcebook can also be an important resource for the research community and nongovernmental organizations NGOs
