W. Sullivan III, 1999-03-30 At the close of the nineteenth century American youths developed a growing interest in electricity and its applications machines and gadgetry When authors and publishers recognized the extent of this interest in technology they sought to create reading materials that would meet this market need The result was science fiction written especially for young adults While critics tended to neglect young adult science fiction for decades they gradually came to recognize its practical and cultural value Science fiction inspired many young adults to study science and engineering and helped foster technological innovation At the same time these works also explored cultural and social concerns more commonly associated with serious literature Nor was young adult science fiction a peculiarly American phenomenon authors in other countries likewise wrote science fiction for young adult readers This book examines young adult science fiction in the U S and several other countries and explores issues central to the genre The first part of the book treats the larger contexts of young adult science fiction and includes chapters on its history and development Included are discussions of science fiction for young adults in the U S and in Canada Great Britain Germany and Australia These chapters are written by expert contributors and chart the history of young adult science fiction from the nineteenth century to the present The second section of the book considers topics of special interest to young adult science fiction Some of the chapters look at particular forms and expressions of science fiction such as films and comic books Others treat particular

topics such as the portrayal of women in Robert Heinlein's works and representations of war in young adult science fiction. Taking a chronological approach, this volume covers the main periods of Canadian science fiction and fantasy from the early nineteenth century to the first decades of the twenty-first century. The book examines both the texts and the contexts of Canadian writing in the fantastic, analyzing themes and techniques in novels and short stories and looking at both national and international contexts of the literature's history. This introduction will offer a coherent narrative of Canadian fantastic literature through analysis of the major texts and authors in the field and through relating the authors' work to the world around them.

*The American Ritual Tapestry* Mary Jo Deegan, 1998-09-24 American rituals are vital to the creation and renewal of cultural meanings and rules for social interaction. These rituals are rooted in tradition yet are rapidly changing, a contradiction of hyper-modern society. This phenomenon was first explored by Professor Deegan in her 1989 study *American Ritual Dramas*. The theory examines both participatory rituals and mass media rituals to show how everyday people become attached to and alienated from other rituals. Elaborating on the critical dramaturgy theory, the essays in this collection show how patterns can be changed to create a more emancipatory and celebratory society. The topics covered in the collection include an analysis of Santa Claus, skinheads, hate crimes, and strip dancing among other topics. Each contributor has participated in these rituals, and many examine related cultural artifacts such as music brochures and so forth. As the essays show, postmodern theory has greatly underestimated the power and coherence of these events. An important study for scholars and other researchers involved with sociological theory, social psychology, and popular culture.

*OVER EXCESSIVE AMBITION AS REFLECTED IN THREE SCIENCE FICTION NOVELS: FRANKENSTEIN, SOLARIS AND INFERNAL DEVICES* KHULOD H. HUSAIN, 2021-08-05. This book attempts to explore the emergence of science fiction as a genre and its development into steampunk as a subgenre of science fiction in selected science fiction novels: Mary Shelley's *Frankenstein* 1823, Stanislaw Lem's *Solaris* 1970 and K W Jeter's *Infernal Devices* 1987. This research shows that the scientists in these novels drag themselves into darkness. Victor, the protagonist of *Frankenstein*, is an ambitious scientist who wants to conquer death but tragically loses his family during this endeavor. Kelvin, the hero of *Solaris*, is psychologically devastated when he struggles to understand how *Solaris* ocean creates a simulation of people. The hero of the third novel, George Dewar's father, a mad scientist and inventor, creates a double of his own son as a robot, tries to destroy the earth. The main argument of this research is that all these novels set in different eras draw on science fiction to criticize and question man's greedy and unrestricted desire for scientific discovery to the extent that they want to conquer the universe and play the role of God. The study will ask the following questions: How do the ambitious scientists in the novels drag themselves into madness? And how does the scientific desire turn into a crave for transcendence, bringing about their damnation? What do these scientific explorations and inventions reveal about human nature? Does steampunk bring evolution to the future as a sub genre of science fiction?
