Making Senses of the Past Jo Day,2013-03-19 Since the nineteenth century museums have kept their artifacts in glass cases to better preserve them and drawings and photographs have become standard ways of presenting the past These practices have led to an archaeology dominated by visual description even though human interaction with the surrounding world involves the whole body and all of its senses In the past few years sensory archaeology has become more prominent and Making Senses of the Past is one of the first collected volumes on this subject This book presents cutting edge research on new theoretical issues The essays presented here take readers on a multisensory journey around the world and across time In ancient Peru a site provides sensory surprises as voices resound beneath the ground and hidden carvings slowly reveal their secrets In Canada and New Zealand the flicker of reflected light from a lake dances on the faces of painted rocks and may have influenced when and why the pigment was applied In Mesopotamia vessels for foodstuffs build a picture of a past cuisine that encompasses taste and social activity in the building of communities While perfume and flowers are examined in various cultures in the chamber tombs of ancient Roman Palestine we are reminded that not all smells are pleasant Making Senses of

the Past explores alternative ways to perceive past societies and offers a new way of wiring archaeology that incorporates the senses *Thinking Through Project-Based Learning* Jane Krauss, Suzie Boss, 2013-03-20 Everything you need to know to lead effective and engaging project based learning Are you eager to try out project based learning but don't know where to start How do you ensure that classroom projects help students develop critical thinking skills and meet rigorous standards Find the answers in this step by step guide written by authors who are both experienced teachers and project based learning experts *Thinking Through Projects* shows you how to create a more interactive classroom environment where students engage learn and achieve Teachers will find A reader friendly overview of project based learning that includes current findings on brain development and connections with Common Core standards Numerous how to's and sample projects for every K-12 grade level Strategies for integrating project learning into all main subject areas across disciplines and with current technology and social media and Ways to involve the community through student field research special guests and ideas for showcasing student work Whether you are new to project based learning or ready to strengthen your existing classroom projects you'll find a full suite of strategies and tools in this essential book

Why Data Science Projects Fail Douglas Gray, Evan Shellshear, 2024-09-05 The field of artificial intelligence data science and analytics is crippling itself Exaggerated promises of unrealistic technologies simplifications of complex projects and marketing hype are leading to an erosion of trust in one of our most critical approaches to making decisions data driven This book aims to fix this by countering the AI hype with a dose of realism Written by two experts in the field the authors firmly believe in the power of mathematics computing and analytics but if false expectations are set and practitioners and leaders don't fully understand everything that really goes into data science projects then a stunning 80% or more of analytics projects will continue to fail costing enterprises and society hundreds of billions of dollars and leading to non experts abandoning one of the most important data driven decision making capabilities altogether For the first time business leaders practitioners students and interested laypeople will learn what really makes a data science project successful By illustrating with many personal stories the authors reveal the harsh realities of implementing AI and analytics

Finding your Social Science Project John Gerring,Jason

Seawright,2022-10-13 The most important step in social science research is the first step finding a topic Unfortunately little guidance on this crucial and difficult challenge is available Methodological studies and courses tend to focus on theory testing rather than theory generation This book aims to redress that imbalance The first part of the book offers an overview of the book s central concerns How do social scientists arrive at ideas for their work What are the different ways in which a study can contribute to knowledge in a field The second part of the book offers suggestions about how to think creatively including general strategies for finding a topic and heuristics for discovery The third part of the book shows how data exploration may assist in generating theories and hypotheses The fourth part of the book offers suggestions about how to fashion disparate ideas into a theory

Can Science Make Sense of Life? Sheila

Jasanoff,2019-03-05 Since the discovery of the structure of DNA and the birth of the genetic age a powerful vocabulary has

emerged to express science's growing command over the matter of life. Armed with knowledge of the code that governs all living things, biology and biotechnology are poised to edit even rewrite the texts of life to correct nature's mistakes. Yet how far should the capacity to manipulate what life is at the molecular level authorize science to define what life is for? This book looks at flash points in law, politics, ethics, and culture to argue that science's promises of perfectibility have gone too far. Science may have editorial control over the material elements of life, but it does not supersede the languages of sense-making that have helped define human values across millennia: the meanings of autonomy, integrity, and privacy; the bonds of kinship, family, and society; and the place of humans in nature.

Micro-Community-Based Participatory Research Health Science Projects, to Problem-solve and Build Leadership skills in Children at risk of ACES in extreme Urban Poverty Robert A. Branch MD FRCP, Michelle L. Steimer , LLC, NCC LPC, 2024-01-02

The Orenda approach We describe the foundational base and health and education process to interface science and health learning for vulnerable adolescents who live in extreme urban poverty in the US the forgotten children to manage emotional and social barriers at this critical stage of their lives These children live in neighborhoods concentrated with dysfunctional families many with Adverse Childhood Experiences ACEs They are at risk for complications of personal and environmental factors while still adolescents They lack the opportunity to build resilience and leadership to overcome these challenges We integrate experiential learning approaches between contemporary physician health and K 12 science learning pedagogy to emphasize the value of science to a community Our experiences are presented of challenges faced and barriers overcome over 4 years in over 100 adolescents in different extreme neighborhoods of poverty in the rust belt city of Pittsburgh

Mission 1 To experience the social skills in an ethical framework for critical thinking and leadership by conducting successful community research in forgotten children 2 To improve the local culture of health care to reduce health disparities in underserved neighborhoods

The Orenda Approach An Iroquois adjective denotes the goal of developing leadership in adolescents The approach is by organizing health sciences clubs for at risk adolescents as an after school activity with trained mentors Small teams select and identify locally relevant health disparities micro Community Based Participatory Research mCBPR projects Using the 5 steps of mCBPR scientific process with a mantra of learn decide and do at each step they conduct a wide range of practices to extend skills promoted by STEM disciplines by adding arts and science as STREAM learning The mCBPR projects are used to draw inferences and present recommendations to reduce barriers posed by the local community Fitted into an academic school year in weekly OST club meetings with an end of academic year the results are shared in a local community health fair

Long term objectives We offer a model for a city wide network of clubs targeted to the most underserved neighborhoods as an approach to improve city wide health equity If sustained This could contribute multiple topics for a cumulative increased awareness to enhance the local culture of health Without help these forgotten children are destined to the local cycle of failure a societal lost opportunity With help each year a cohort of students would be trained in problem solving as an increased societal opportunity as community leaders for the future
