*The Forgotten Revolution* Lucio Russo, Silvio (translator)

Levy, 2003-11-26 The period from the late fourth to the late second century B C witnessed in Greek speaking countries an explosion of objective knowledge about the external world While Greek culture had reached great heights in art literature and philosophy already in the earlier classical era it is in the so called Hellenistic period that we see for the first time anywhere in the world the appearance of science as we understand it now not an accumulation of facts or philosophically based speculations but an organized effort to model nature and apply such models or scientific theories in a sense we will make precise to the solution of practical problems and to a growing understanding of nature We owe this new approach to scientists such as Archimedes Euclid Eratosthenes and many others less familiar today but no less remarkable Yet not long after this golden period much of this extraordinary development had been reversed Rome borrowed what it was capable of from the Greeks and kept it for a little while yet but created very little science of its own Europe was soon smothered in the obscurantism and stasis that blocked most avenues of intellectual development for a thousand years until as is well known the rediscovery of ancient culture in its fullness paved the way to the modern age

Science in Russia and the Soviet Union Loren R. Graham, 1993 By the 1980s the Soviet scientific establishment had become the largest in the world but very little of its history was known in the West What has been needed for many years in order to fill that gap in our knowledge is a history of Russian and Soviet science written for the educated person who would like to read one book on the subject This book has been written for that reader The history of Russian and Soviet science is a story of remarkable achievements and frustrating failures That history is presented here in a comprehensive form and explained in terms of its social and political context Major sections include the tsarist period the impact of the Russian Revolution the relationship between science and Soviet society and the strengths and weaknesses of individual scientific disciplines The book also discusses the changes brought to science in Russia and other republics by the collapse of communism in the late 1980s and early 1990s

*Science and Technology* Ralph Sanders, Fred R. Brown, 1966

Science and Technology in the Global Cold War Naomi Oreskes, John Krige, 2014-11-07 Investigations of how the global Cold War shaped national scientific and technological practices in fields from biomedicine to rocket science The Cold War period saw a dramatic expansion of state funded science and technology research Government and military patronage shaped Cold War technoscientific practices imposing methods that were project oriented team based and subject to national security restrictions These changes affected not just the arms race and the space race but also research in agriculture biomedicine computer science ecology meteorology and other fields This volume examines science and technology in the context of the Cold War considering whether the new institutions and institutional arrangements that emerged globally constrained technoscientific inquiry or offered greater opportunities for it The

contributors find that whatever the particular science and whatever the political system in which that science was operating the knowledge that was produced bore some relation to the goals of the nation state These goals varied from nation to nation weapons research was emphasized in the United States and the Soviet Union for example but in France and China scientific independence and self reliance dominated The contributors also consider to what extent the changes to science and technology practices in this era were produced by the specific politics anxieties and aspirations of the Cold War Contributors Elena Aronova Erik M Conway Angela N H Creager David Kaiser John Krige Naomi Oreskes George Reisch Sigrid Schmalzer Sonja D Schmid Matthew Shindell Asif A Siddiqi Zuoyue Wang Benjamin Wilson
