Science, Technology, and American Foreign Policy Eugene B. Skolnikoff, 1969 **Science, Technology, and American Foreign Policy** Eugene B. Skolnikoff, Science, Technology and American Foreign Policy Eugene Bertram Skolnikoff, 1965 **Science, Technology and American Diplomacy** United States. President, 1986 **Science, Technology, and American Diplomacy, U.S. Scientists Abroad** United States. Congress. House. Foreign Affairs, 1974 American Foreign Policy , 1991 *Hearings, Reports and Prints of the House Committee on Foreign Affairs* United States. Congress. House. Committee on Foreign Affairs (1789-1975), 1970 The Elusive Transformation Eugene B. Skolnikoff, 1994-08-22 Eugene Skolnikoff treats the roles of science and technology across the entire range of relations among nations including security and economic issues environmental questions international economic competitiveness the spread of weapons technology the demise of communism the new content of dependency relations and the demanding new problems of national and international governance He shows how the structure and operation of the scientific and technological enterprises have interacted with international affairs to lead to the dramatic evolution of world politics experienced in this century particularly after World War II Foreign Policy Implications of AIDS John C. Whitehead, 1988

Science, Technology, and Foreign Affairs: Global environment, communications, and agriculture Diane B. Bendahmane, David William McClintock, 1985 **Monthly Catalog of United States Government Publications** , 1993

Science and American Foreign Relations since World War II Greg Whitesides, 2020-05-28 The sciences played a critical role in American foreign policy after World War II From atomic energy and satellites to the green revolution scientific advances were central to American diplomacy in the early Cold War as the United States leveraged its scientific and technical pre eminence to secure alliances and markets The growth of applied research in the 1970s exemplified by the biotech industry led the United States to promote global intellectual property rights Priorities shifted with the collapse of the Soviet Union as attention turned to information technology and environmental sciences Today international relations take place within a scientific and technical framework whether in the headlines on global warming and the war on terror or in the fine print of intellectual property rights Science and American Foreign Relations since World War II provides the historical background necessary to understand the contemporary geopolitics of science *Foreign Relations Authorization for Fiscal Year 1979* United States. Congress. House. Committee on International Relations, United States. Congress. House. Committee on International Relations. Subcommittee on International Operations, 1978 Monthly Catalogue, United States Public Documents , 1986 *Overview of International Science and Technology Policy* United States. Congress. House. Committee on Foreign Affairs. Subcommittee on International Security and Scientific Affairs, 1984 **American Foreign Policy Current Documents** , 1988 **Oceanographers and the Cold War** Jacob Darwin Hamblin, 2011-07-01 A political history of twentieth century oceanography Oceanographers and the Cold War is about patronage politics and the community

of scientists It is the first book to examine the study of the oceans during the Cold War era and explore the international focus of American oceanographers taking into account the roles of the US Navy US foreign policy and scientists throughout the world Jacob Darwin Hamblin demonstrates that to understand the history of American oceanography one must consider its role in both conflict and cooperation with other nations Paradoxically American oceanography after World War II was enmeshed in the military industrial complex while characterized by close international cooperation The military dimension of marine science with its involvement in submarine acoustics fleet operations and sea launched nuclear missiles coexisted with data exchange programs with the Soviet Union and global operations in seas without borders From an uneasy cooperation with the Soviet bloc in the International Geophysical Year of 1957 58 to the NATO Science Committee in the late 1960s which excluded the Soviet Union to the US Marine Sciences Council which served as an important national link between scientists and the government Oceanographers and the Cold War reveals the military and foreign policy goals served by US government involvement in cooperative activities between scientists such as joint cruises and expeditions It demonstrates as well the extent to which oceanographers used international cooperation as a vehicle to pursue patronage from military government and commercial sponsors during the Cold War as they sought support for their work by creating disciples of marine science wherever they could A political history of twentieth century oceanography
