Thagard uses new accounts of brain mechanisms and social interactions to forge theories of mind knowledge reality morality justice meaning and the arts Natural Philosophy brings new methods for analyzing concepts understanding values and achieving coherence It shows how to unify the humanities with the cognitive and social sciences How can people know what is real and strive to make the world better Philosophy is the attempt to answer general questions about the nature of knowledge reality and values Natural Philosophy pursues these questions by drawing heavily on the sciences and finds no room for supernatural entities such as souls gods and possible worlds It provides original accounts of the traditional branches of philosophy including epistemology metaphysics ethics and aesthetics Rather than reducing the humanities to the sciences this book displays fertile interconnections that show that philosophical questions and artistic practices can be much better understood by considering how human brains operate and interact in social contexts The sciences and the humanities are interdependent because both the natural and social sciences cannot avoid questions about methods and values that are primarily the province of philosophy This book belongs to a trio that includes Brain Mind From Neurons to Consciousness and Creativity and Mind Society From Brains to Social Sciences and Professions They can be read independently but together they make up a Treatise on Mind and Society that provides a unified and comprehensive treatment of the cognitive sciences social sciences professions and humanities
