Goodman, Prof. Deborah Heath, M. Susan York Times newspaper on genetics Lindee, 2003-11-06 The so called science wars pit science against culture and nowhere is the struggle more contentious or more fraught with paradox than in the burgeoning realm of genetics A constructive response and a welcome intervention this volume brings together biological and cultural anthropologists to conduct an interdisciplinary dialogue that provokes and instructs even as it bridges the science culture divide Individual essays address issues raised by the science politics and history of race evolution and identity genetically modified organisms and genetic diseases gene work and ethics and the boundary between humans and animals The result is an entree to the complicated nexus of questions prompted by the power and importance of genetics and genetic thinking and the dynamic connections linking culture biology nature and technoscience The volume offers critical perspectives on science and culture with contributions that span disciplinary divisions and arguments grounded in both biological perspectives and cultural analysis An invaluable resource and a provocative introduction to new research and thinking on the uses and study of genetics Genetic Nature Culture is a model of fruitful dialogue presenting the quandaries faced by scholars on both sides of the two cultures debate Time, Genetics and Complex Disease Guang-Zhong Wang, Christoph W Turck, Louying Zhang, 2023-06-22 Biological traits and diseases tend to be very complex Time is an aspect that deserves particular attention to study and decipher biological traits and disease mechanisms many processes including biological rhythms neurodevelopmental and neurodegenerative mechanisms and aging have a time dependent trajectory Biological rhythms such as circadian rhythms are a reflection of biological processes over 24 hours In the case of developmental and aging processes they reflect biological activities over a much longer time scale typically across years or even decades In recent years these research fields have been cross fertilizing each other Examples include apparent alterations of circadian regulation in adult and aging individuals and a potential link between

circadian disruption and Autism Spectrum Disorders Alzheimer s Disease and Major Depressive Disorder Recent research aimed at decoding these time related complexities has led to the implementation and utilization of various omics methods Transcriptomics and proteomics have matured into standard methods for profiling expression changes on a large scale across different time points Single cell sequencing technology will gain popularity for decoding cell type diversity With regard to data analysis the identification of differentially expressed genes and proteins across time is of great interest Granted there are also topic specific methods too For circadian rhythm research molecules that show rhythmic activity signals are of prime interest whereas for life span studies the major focus is the identification of genes whose expression changes over long time periods These topic specific research methods can greatly benefit from each other s expertise Drawing the Map of Life Viktor K. McElheny, 2012-07-31 Drawing the Map of Life is the dramatic story of the Human Genome Project from its origins through the race to order the 3 billion subunits of DNA to the surprises emerging as scientists seek to exploit the molecule of heredity It s the first account to deal in depth with the intellectual roots of the project the motivations that drove it and the hype that often masked genuine triumphs Distinguished science journalist Victor McElheny offers vivid insightful profiles of key people such as David Botstein Eric Lander Francis Collins James Watson Michael Hunkapiller and Craig Venter McElheny also shows that the Human Genome Project is a striking example of how new techniques such as restriction enzymes and sequencing methods often arrive first shaping the questions scientists then ask Drawing on years of original interviews and reporting in the inner circles of biological science Drawing the Map of Life is the definitive up to date story of today s greatest scientific quest No one who wishes to understand genome mapping and how it is transforming our lives can afford to miss this book The Trouble with Nature Roger N. Lancaster, 2003-04 Lancaster provides the disproof of evolutionary stories about men women and the nature of desire of the heterosexual fables that pervade popular culture from prime time sitcoms to scientific theories about the so called gay gene Biogenetic Paradoxes of the Nation Sakari Tamminen, 2019-11-22 In 1992 the Convention on Biological Diversity CBD signed by over 160 countries and hailed as the key symbol of a common vision for saving Earth's biodiversity set forth three primary mandates preserving biodiversity using biodiversity components sustainably and enabling economic benefit sharing The CBD which gave signatory countries the ability to claim sovereignty over nonhuman genetic resources native to each nation defined biodiversity through a politics of nationhood in ways that commodified genetic resources In Biogenetic Paradoxes of the Nation Sakari Tamminen traces the ways in which the CBD s seemingly compatible yet ultimately paradox ridden aims became manifest in efforts to create conserve and capitalize on distinct animal and plant species In using Finland as a case study with which to understand the worldwide efforts to convert species into manifestations of national identity Tamminen shows how the CBD s policies contribute less to biodiversity conservation than to smoothing the way for frictionless operation of biotechnologically assisted circuits of the global bioeconomy Tamminen demonstrates how an intimate look at the high level politics and technical

of flowering is of upmost importance because it determines yield Phenotypic variation for this trait is largely controlled by genes which were often modified during domestication or crop improvement Understanding the genetic basis of flowering time regulation offers new opportunities for selection in plant breeding and for genome editing and genetic modification of <u>Utopias</u> Howard P. Challenging Genetic Determinism Louis Maheu, Roderick A. Macdonald, 2011-08-23 Advances in genetic research have captured the attention of the media and the public through reports about genetically caused diseases and behaviours However all too often the coverage of scientists innovations has implied that genetic factors alone are responsible for effects ranging from personality and sexual preferences to morbid obesity and intellectual disabilities Challenging Genetic Determinism argues that hypotheses cannot be based solely on genetic factors but must take into account the context in Jewish Biomedical Law Daniel B.
