Alexanderson, 2011-09-06 Top mathematicians talk about their work and lives Fascinating Mathematical People is a collection of informal interviews and memoirs of sixteen prominent members of the mathematical community of the twentieth century many still active The candid portraits collected here demonstrate that while these men and women vary widely in terms of their backgrounds life stories and worldviews they all share a deep and abiding sense of wonder about mathematics Featured here in their own words are major research mathematicians whose cutting edge discoveries have advanced the frontiers of the field such as Lars Ahlfors Mary Cartwright Dusa McDuff and Atle Selberg Others are leading mathematicians who have also been highly influential as teachers and mentors like Tom Apostol and Jean Taylor Fern Hunt describes what it was like to be among the first black women to earn a PhD in mathematics Harold Bacon made trips to Alcatraz to help a prisoner learn calculus Thomas Banchoff who first became interested in the fourth dimension while reading a Captain Marvel comic relates his fascinating friendship with Salvador Dal and their shared passion for art mathematics and the profound connection between the two Other mathematical people found here are Leon Bankoff who was also a Beverly Hills dentist Arthur Benjamin a part time professional magician and Joseph Gallian a legendary mentor of future mathematicians but also a world renowned expert on the Beatles This beautifully illustrated collection includes many photographs never before published concise introductions by the editors to each person and a foreword by Philip J Davis

More Mathematical People Donald J. Albers, Gerald L. LOST Opportunities Bronwyn Bevan, Philip Bell, Reed Stevens, Aria Razfar, 2012-07-26 Learning in informal settings is attracting growing attention from policymakers and researchers yet there remains at the moment a dearth of literature on the topic Thus this volume which examines how science and mathematics are experienced in everyday and out of school time OST settings makes an important contribution to the field of the learning sciences Conducting research on OST learning requires us to broaden and deepen our conceptions of learning as well as to better identify the unique and common qualities of different learning settings We must also find better ways to analyze the interplay between OST and school based learning In this volume scholars develop theoretical structures that are useful not only for understanding learning processes but also for helping to create and support new opportunities for learning whether they are in or out of school or bridging a range of settings The chapters in this volume include studies of everyday and situated processes that facilitate science and mathematics learning They also feature new theoretical and empirical frameworks for studying learning pathways that span both in and out of school time and settings Contributors also examine structured OST programs in which everyday and situated modes of learning are leveraged in support of more disciplined practices and conceptions of science and mathematics Fortifying much of this work is a leading focus on educational equity a desire to foster more socially supportive and intellectually engaging science and mathematics learning opportunities for youth from historically non dominant

Axiomatics Alma Steingart, 2023-01-17 The first history of postwar mathematics offering a new interpretation of the rise of abstraction and axiomatics in the twentieth century Why did abstraction dominate American art social science and natural science in the mid twentieth century Why despite opposition did abstraction and theoretical knowledge flourish across a diverse set of intellectual pursuits during the Cold War In recovering the centrality of abstraction across a range of modernist projects in the United States Alma Steingart brings mathematics back into the conversation about midcentury American intellectual thought The expansion of mathematics in the aftermath of World War II she demonstrates was characterized by two opposing tendencies research in pure mathematics became increasingly abstract and rarified while research in applied mathematics and mathematical applications grew in prominence as new fields like operations research and game theory brought mathematical knowledge to bear on more domains of knowledge Both were predicated on the same abstractionist conception of mathematics and were rooted in the same approach modern axiomatics For American mathematicians the humanities and the sciences did not compete with one another but instead were two complementary sides of the same epistemological commitment Steingart further reveals how this mathematical epistemology influenced the sciences and humanities particularly the postwar social sciences As mathematics changed so did the meaning of mathematization Axiomatics focuses on American mathematicians during a transformative time following a series of

controversies among mathematicians about the nature of mathematics as a field of study and as a body of knowledge The ensuing debates offer a window onto the postwar development of mathematics and Cold War epistemology writ large As Steingart's history ably demonstrates mathematics is the social activity in which styles of truth here abstraction become synonymous with ways of knowing
