Optimizing Methods in Statistics Jagdish S. Rustagi, 2014-05-10 Optimizing Method in Statistics is a compendium of papers dealing with variational methods regression analysis mathematical programming optimum seeking methods stochastic control optimum design of experiments optimum spacings and order statistics One paper reviews three optimization problems encountered in parameter estimation namely 1 iterative procedures for maximum likelihood estimation based on complete or censored

samples of the parameters of various populations 2 optimum spacings of quantiles for linear estimation and 3 optimum choice of order statistics for linear estimation Another paper notes the possibility of posing various adaptive filter algorithms to make the filter learn the system model while the system is operating in real time By reducing the time necessary for process modeling the time required to implement the acceptable system design can also be reduced One paper evaluates the parallel structure between duality relationships for the linear functional version of the generalized Neyman Pearson problem as well as the duality relationships of linear programming as these apply to bounded variable linear programming problems The compendium can prove beneficial to mathematicians students and professor of calculus statistics or advanced mathematics

Basic Mathematical Programming Theory Giorgio Giorgi,Bienvenido Jiménez,Vicente Novo,2023-07-18 The subject of static optimization also called mathematical programming is one of the most important and widespread branches of modern mathematics serving as a cornerstone of such scientific subjects as economic analysis operations research management sciences engineering chemistry physics statistics computer science biology and social sciences This book presents a unified progressive treatment of the basic mathematical tools of mathematical programming theory The authors expose said tools along with results concerning the most common mathematical programming problems formulated in a finite dimensional setting forming the basis for further study of the basic questions on the various algorithmic methods and the most important particular applications of mathematical programming problems This book assumes no previous experience in optimization theory and the treatment of the various topics is largely self contained Prerequisites are the basic tools of differential

calculus for functions of several variables the basic notions of topology and of linear algebra and the basic mathematical notions and theoretical background used in analyzing optimization problems The book is aimed at both undergraduate and postgraduate students interested in mathematical programming problems but also those professionals who use optimization methods and wish to learn the more theoretical aspects of these questions Handbook of Mathematics Ilja N.
