Mathematical Snapshots Hugo Steinhaus, 1969 **Mathematical Snapshots** Hugo Steinhaus, 1950 *The Unravelers* Jean-Francois Dars, Annick Lesne, Anne Papillault, 2008-07-22 Through revealing photographs and accompanying text this book offers an enchanting and beautiful glimpse into the inner life of the Institut des Hautes tudes Scientifiques IHES The IHES in France is an institute of advanced research in mathematics and theoretical physics with an interest in epistemology and the history of science It provides exceptionally gifted scientists with a place where they can devote themselves entirely to their research free of teaching and administrative constraints and offers them the opportunity to invite visitors with whom they wish to work **Mathematical Snapshots** Hugo Steinhaus, 1938 **Mathematical Snapshots**, 1951 One Hundred Problems in Elementary Mathematics Hugo Steinhaus, 2016-04-10 Both a challenge to mathematically inclined readers and a useful supplementary text for high school and college courses *One Hundred Problems in Elementary Mathematics* presents an instructive stimulating collection of problems Many problems address such matters as numbers equations inequalities points polygons circles ellipses space polyhedra and spheres An equal number deal with more amusing or more practical subjects such as a picnic ham blood groups rooks on a chessboard and the doings of the ingenious Dr Abracadabrus Are the problems in this book really elementary Perhaps not in the lay reader s sense for anyone who desires to solve these problems must know a fair amount of mathematics up to calculus Nevertheless Professor Steinhaus has given complete detailed solutions to every one of his 100 problems and anyone who works through the solutions will painlessly learn an astonishing amount of mathematics A final chapter provides a true test for the most proficient readers 13 additional unsolved problems including some for which the author himself does not know the solutions

Mathematical Discovery Brian Thomson, Judith Bruckner, Andrew Bruckner, 2011-04-28 This book is an outgrowth of classes given at the University of California Santa Barbara mainly for students who had little mathematical background Many of the students indicated they never understood what mathematics was all about beyond what they learned in algebra and geometry Was there any more math ematics to be discovered or created How could one actually discover or create new mathematics In order to give these students some sort of answers to such questions we designed a course in which the

students could actually participate in the discovery of mathematics

Guide to Information Sources in Mathematics and Statistics Martha A. Tucker, Nancy D. Anderson, 2004-09-30 This book is a reference for librarians mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century We are in a time of transition in scholarly communications in mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information Where journals books indexes and catalogs were once the physical representation of a good mathematics library shelves have given way to computers and users are often accessing information from remote places Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics These are grouped by type of material Publication dates range from the 1800 s onwards Hundreds of electronic resources some online both dynamic and static some in fixed media are listed among the paper resources Amazingly a majority of listed electronic resources are free

Mathematical Analysis Mariano Giaquinta, Giuseppe Modica, 2012-12-06 For more than two thousand years some familiarity with mathematics has been regarded as an indispensable part of the intellectual equipment of every cultured person Today the traditional place of mathematics in education is in grave danger Unfortunately professional representatives of mathematics share in the responsibility The teaching of mathematics has sometimes degenerated into empty drill in problem solving which may develop formal ability but does not lead to real understanding or to greater intellectual independence Mathematical research has shown a tendency toward overspecialization and over emphasis on abstraction Applications and connections with other fields have been neglected But understanding of mathematics cannot be transmitted by painless entertainment any more than education in music can be brought by the most brilliant journalism to those who never have listened intensively Actual contact with the content of living mathematics is necessary Nevertheless technicalities and detours should be avoided and the presentation of mathematics should be just as free from emphasis on routine as from forbidding dogmatism which refuses to disclose motive or goal and which is an unfair obstacle to honest effort From the preface to the first edition of What is Mathematics by Richard Courant and Herbert Robbins 1941

A Mathematical Kaleidoscope B Conolly, S. Vajda, 1995-01-15 In mathematical studies drawn from algebra geometry analysis statistics and computational methodology applications are discussed in separate chapters each prefaced by a summary of content and relevance Some branches of the mathematics covered might be regarded as old fashioned but they are still vigorous and relevant today

Alexanderson, 2011-09-06 Top mathematicians talk about their work and lives Fascinating Mathematical People is a collection of informal interviews and memoirs of sixteen prominent members of the mathematical community of the twentieth century many still active The candid portraits collected here demonstrate that while these men and women vary widely in terms of their backgrounds life stories and worldviews they all share a deep and abiding sense of

wonder about mathematics Featured here in their own words are major research mathematicians whose cutting edge discoveries have advanced the frontiers of the field such as Lars Ahlfors Mary Cartwright Dusa McDuff and Atle Selberg Others are leading mathematicians who have also been highly influential as teachers and mentors like Tom Apostol and Jean Taylor Fern Hunt describes what it was like to be among the first black women to earn a PhD in mathematics Harold Bacon made trips to Alcatraz to help a prisoner learn calculus Thomas Banchoff who first became interested in the fourth dimension while reading a Captain Marvel comic relates his fascinating friendship with Salvador Dal and their shared passion for art mathematics and the profound connection between the two Other mathematical people found here are Leon Bankoff who was also a Beverly Hills dentist Arthur Benjamin a part time professional magician and Joseph Gallian a legendary mentor of future mathematicians but also a world renowned expert on the Beatles This beautifully illustrated collection includes many photographs never before published concise introductions by the editors to each person and a foreword by Philip J Davis

Nelsen, 2015-08-21 Solid geometry is the traditional name for what we call today the geometry of three dimensional Euclidean space Courses in solid geometry have largely disappeared from American high schools and colleges The authors are convinced that a mathematical exploration of three dimensional geometry merits some attention in today s curriculum A Mathematical Space Odyssey Solid Geometry in the 21st Century is devoted to presenting techniques for proving a variety of mathematical results in three dimensional space techniques that may improve one s ability to think visually Special attention is given to the classical icons of solid geometry prisms pyramids platonic solids cones cylinders and spheres and many new and classical results Cavalieri s principle Commandino s theorem de Gua s theorem Prince Rupert s cube the Menger sponge the Schwarz lantern Euler s rotation theorem the Loomis Whitney inequality Pythagorean theorems in three dimensions etc The authors devote a chapter to each of the following basic techniques for exploring space and proving theorems enumeration representation dissection plane sections intersection iteration motion projection and folding and unfolding In addition to many figures illustrating theorems and their proofs a selection of photographs of three dimensional works of art and architecture are included Each chapter includes a selection of Challenges for the reader to explore further properties and applications It concludes with solutions to all the Challenges in the book references and a complete index Readers should be familiar with high school algebra plane and analytic geometry and trigonometry While brief appearances of calculus do occur no knowledge of calculus is necessary to enjoy this book
