Benes, 1985      Mathematical Theory Of Nonblocking Switching Networks, The (2nd Edition) Frank Kwang-ming Hwang, 2004-10-05 The first edition of this book covered in depth the mathematical theory of nonblocking multistage interconnecting networks which is applicable to both communication and computer networks This comprehensively updated version puts more emphasis to the multicast and multirate networks which are under fast development recently due to their wide applications This comprehensively updated new edition not only introduces the classical theory of the fundamental point to point network but also has a renewed emphasis on the latest multicast and multirate networks The book can serve as either a one or two semester textbook for graduate students of information science electronic communications and applied mathematics In addition as all the relevant literature is organized and evaluated under one structured framework the volume is an essential reference for researchers in those areas      **The Mathematical Theory of Nonblocking Switching Networks** Frank Hwang, 2004 The first edition of this book was the first to cover in depth the mathematical theory of nonblocking multistage interconnecting networks which is applicable to both communication and computer networks This comprehensively updated new edition not only introduces the classical theory of the fundamental point to point network but also has a renewed emphasis on the latest multicast and multirate networks The book can serve as either a one or two semester textbook for graduate students of information science electronic communications and applied mathematics In addition as all the relevant literature is organized and evaluated under one structured framework the volume is an essential reference for researchers in those areas      Mathematical Theory of Connecting Networks and Telephone Traffic Václav E. Benes, 1965      The Mathematics of Networks Stefan Andrus Burr, 1982 The theory of networks is a very lively one both in terms of developments in the theory itself and of the variety of its applications This book based on the 1981 AMS Short Course on the Mathematics of Networks introduces most of the basic ideas of network theory and develops some of these ideas considerably      *Network Flow, Transportation, and Scheduling; Theory and Algorithms* Masao, 2011-10-14 Network Flow Transportation and Scheduling Theory and Algorithms      *Introduction to the Mathematical Theory of Control Processes* Richard Bellman, 2016-06-03 Introduction to the Mathematical Theory of Control Processes      *Problems in Applied Mathematics* Murray S. Klamkin, 1990-01-01 People in all walks of life and perhaps mathematicians especially delight in working on problems for the

sheer pleasure of meeting a challenge The problem section of SIAM Review has always provided such a challenge for mathematicians The section was started to offer classroom instructors and their students as well as other interested problemists a set of problems solved or unsolved illustrating various applications of mathematics In many cases the unsolved problems were eventually solved Problems in Applied Mathematics is a compilation of 380 of SIAM Review's most interesting problems dating back to the journal's inception in 1959 The problems are classified into 22 broad categories including Series Special Functions Integrals Polynomials Probability Combinatorics Matrices and Determinants Optimization Inequalities Ordinary Differential Equations Boundary Value Problems Asymptotics and Approximations Mechanics Graph Theory and Geometry

### **Introduction to the Mathematical Theory of Control Processes: Nonlinear Processes v. 2**

Bellman, 1971-04-20 Introduction to the Mathematical Theory of Control Processes Nonlinear Processes v. 2 *Annotated Bibliography of the Literature on Resource Sharing Computer Networks* Robert P. Blanc, 1973 *Entropy Measures,*

*Maximum Entropy Principle and Emerging Applications* Karmeshu, 2012-10-01 The last two decades have witnessed an enormous growth with regard to applications of information theoretic framework in areas of physical biological engineering and even social sciences In particular growth has been spectacular in the field of information technology soft computing nonlinear systems and molecular biology Claude Shannon in 1948 laid the foundation of the field of information theory in the context of communication theory It is indeed remarkable that his framework is as relevant today as was when he first proposed it Shannon died on Feb 24 2001 Arun Netravali observes As if assuming that inexpensive high speed processing would come to pass Shannon figured out the upper limits on communication rates First in telephone channels then in optical communications and now in wireless Shannon has had the utmost value in defining the engineering limits we face Shannon introduced the concept of entropy The notable feature of the entropy framework is that it enables quantification of uncertainty present in a system In many realistic situations one is confronted only with partial or incomplete information in the form of moment or bounds on these values etc and it is then required to construct a probabilistic model from this partial information In such situations the principle of maximum entropy provides a rational basis for constructing a probabilistic model It is thus necessary and important to keep track of advances in the applications of maximum entropy principle to ever expanding areas of knowledge *Diakoptics and Networks* Happ, 1971-03-20 Diakoptics and Networks **Weakly**

**Connected Neural Networks** Frank C. Hoppensteadt, Eugene M. Izhikevich, 2012-12-06 This book is devoted to an analysis of general weakly connected neural networks WCNNs that can be written in the form  $\dot{x}_i = -x_i + \sum_{j=1}^n g_{ij} x_j$  Here each  $x_i \in \mathbb{R}$  is a vector that summarizes all physiological attributes of the  $i$ th neuron  $n$  is the number of neurons  $I_i$  describes the dynamics of the  $i$ th neuron and  $g_{ij}$  describes the interactions between neurons The small parameter indicates the strength of connections between the neurons Weakly connected systems have attracted much attention since the second half of seventeenth century when Christian Huygens noticed that a pair of pendulum clocks synchronize when they are attached to a light weight beam

instead of a wall The pair of clocks is among the first weakly connected systems to have been studied Systems of the form  $0 \rightarrow 1$  arise in formal perturbation theories developed by Poincare Liapunov and Malkin and in averaging theories developed by Bogoliubov and Mitropolsky **NBS Special Publication** ,1973 *Multiwavelength Optical Networks* Thomas E. Stern,Georgios Ellinas,Krishna Bala,2009 Second edition of the acclaimed Multiwavelength Optical Networks describing architectures enabling technologies and analytical tools Probability and Mathematical Genetics N. H. Bingham,C. M. Goldie,2010-07-15 Focussing on the work of Sir John Kingman one of the world s leading researchers in probability and mathematical genetics this book touches on the important areas of these subjects in the last 50 years Leading authorities give a unique insight into a wide range of currently topical problems Papers in probability concentrate on combinatorial and structural aspects in particular exchangeability and regeneration The Kingman coalescent links probability with mathematical genetics and is fundamental to the study of the latter This has implications across the whole of genomic modelling including the Human Genome Project Other papers in mathematical population genetics range from statistical aspects including heterogeneous clustering to the assessment of molecular variability in cancer genomes Further papers in statistics are concerned with empirical deconvolution perfect simulation and wavelets This book will be warmly received by established experts as well as their students and others interested in the content
