Steffe, 2012-12-06 On the 26th 27th and 28th of February of 1988 a conference was held on the epistemological foundations of mathematical experience as part of the activities of NSF Grant No MDR 8550463 Child Generated Multiplying and Dividing Algorithms A Teaching Experiment I had just completed work on the book Construction of Arithmetical Meanings and Strategies with Paul Cobb and Ernst von Glasersfeld and felt that substantial progress had been made in understanding the early numerical experiences of the six children who were the subjects of study in that book While the book was in preparation I was also engaged in the teaching experiment on multiplying and dividing algorithms My focus in this teaching experiment was on investigating the mathematical experiences of the involved children and on developing a language through which those experiences might be expressed However prior to immersing myself in the conceptual analysis of the mathematical experiences of the children I felt that it was crucial to critically evaluate the progress that we felt we had made in our earlier work It was toward achieving this goal that I organized the conference When trying to understand the mathematical experiences of a child one can do no better than to interact with the child in a

mathematical context guided by the intention to specify the child's current knowledge and the progress the child might make

teaching may be less than adequate These are important issues for policy and practice because of longstanding difficulties in recruiting teachers who are confident and conventionally well qualified in mathematics and because of rising concern that teaching of the subject has not adapted sufficiently The issues to be examined in Mathematical Knowledge in Teaching are of considerable significance in addressing global aspirations to raise standards of teaching and learning in mathematics by developing more effective approaches to characterizing assessing and developing mathematical knowledge for teaching

Mathematics and Mind Alexander George, 1994 Those inquiring into the nature of mind have long been interested in the foundations of mathematics and conversely this branch of knowledge is distinctive in that our access to it is purely through thought A better understanding of mathematical thought should clarify the conceptual foundations of mathematics and a deeper grasp of the latter should in turn illuminate the powers of mind through which mathematics is made available to us The link between conceptions of mind and of mathematics has been a central theme running through the great competing philosophies of mathematics of the twentieth century though each has refashioned the connection and its import in distinctive ways The present collection will be of interest to students of both mathematics and of mind Contents include Introduction by Alexander George What is Mathematics About by Michael Dummett The Advantages of Honest Toil over Theft by George Boolos The Law of Excluded Middle and the Axiom of Choice by W W Tait Mechanical Procedures and Mathematical Experience by Wilfried Sieg Mathematical Intuition and Objectivity by Daniel Isaacson Intuition and Number by Charles Parsons and Hilbert s Axiomatic Method and the Laws of Thought by Michael Hallett

This book brings together leading researchers in mathematics education to share personal narratives of key mathematical moments or ideas that inspired surprised or helped direct their research While the fruits of research activities and products are shared at scholarly conference and journals the footprints of mathematics that ignited the research processes is often behind the scenes and only acknowledged informally To make mathematics an essential component and a determining driving force of mathematics education research more visible chapters in this book highlight the indispensable and indisputable role of mathematics in mathematics education research The book is unique and timely in addressing the essential but increasingly side lined role of mathematics that permeates mathematics education research journals graduate programs and the personae of the next generation in the profession It renounces the shift away from mathematics and attempts to restore the place and value of mathematics by presenting elegant intriguing and substantial contributions to mathematics education that have come from keeping mathematics at the core of research pursuits Each chapter shares a journey in mathematics education research that was inspired by an affinity for mathematics and that helped shaped the field as we know it Each author shares insights and reflections on the status of mathematics in the mathematics education community how it has changed and what further changes might be expected This edited volume is of major interest to the mathematics education community including mathematics educators teacher educators researchers professional development providers and graduate students

After Gödel Richard Tieszen, 2011-05-05

Richard Tieszen presents an analysis development and defense of a number of central ideas in Kurt Gödel's writings on the philosophy and foundations of mathematics and logic Tieszen structures the argument around Gödel's three philosophical heroes Plato Leibniz and Husserl and his engagement with Kant and supplements close readings of Gödel's texts on foundations with materials from Gödel's Nachlass and from Hao Wang's discussions with Gödel As well as providing discussions of Gödel's views on the philosophical significance of his technical results on completeness incompleteness undecidability consistency proofs speed up theorems and independence proofs Tieszen furnishes a detailed analysis of Gödel's critique of Hilbert and Carnap and of his subsequent turn to Husserl's transcendental philosophy in 1959 On this basis a new type of platonic rationalism that requires rational intuition called constituted platonism is developed and defended Tieszen shows how constituted platonism addresses the problem of the objectivity of mathematics and of the knowledge of abstract mathematical objects Finally he considers the implications of this position for the claim that human minds monads are machines and discusses the issues of pragmatic holism and rationalism
