Alasdair Urquhart on Nonclassical and Algebraic Logic and Complexity of Proofs Ivo Düntsch,Edwin Mares,2021-09-24

This book is dedicated to the work of Alasdair Urquhart. The book starts out with an introduction to and an overview of Urquhart's work and an autobiographical essay by Urquhart. This introductory section is followed by papers on algebraic logic and lattice theory, papers on the complexity of proofs and papers on philosophical logic and history of logic. The final section of the book contains a response to the papers by Urquhart. Alasdair Urquhart has made extremely important contributions to a variety of fields in logic. He produced some of the earliest work on the semantics of relevant logic. He provided the undecidability of the logics R of relevant implication and E of relevant entailment as well as some of their close neighbors. He proved that interpolation fails in some of those systems. Urquhart has done very important work in complexity theory both about the complexity of proofs in classical and some nonclassical logics. In pure algebra he has produced a representation theorem for lattices and some rather beautiful duality theorems. In addition he has done important work in the history of logic especially on Bertrand Russell including editing Volume four of Russell's *Collected Papers*. New Computational Paradigms S.B. Cooper, Benedikt Löwe, Andrea Sorbi, 2007-11-28. This superb exposition of a complex subject examines new developments in the theory and practice of computation from a mathematical perspective with topics ranging from classical computability to complexity from biocomputing to quantum computing. This book is suitable for researchers and graduate students in mathematics, philosophy and computer science with a special interest in logic and foundational issues. Most useful to graduate students are the survey papers on computable analysis and biological computing. Logicians and theoretical physicists will also benefit from this book. **Logical Approaches to Computational Barriers** Arnold Beckmann, Ulrich Berger, Benedikt Löwe, John V. Tucker, 2006-06-29. This book constitutes the refereed proceedings of the Second International Conference on Computability in Europe CiE 2006 held in Swansea UK June/July 2006. The book presents 31 revised full papers together with 30 invited papers including papers corresponding to 8 plenary talks and 6 special sessions on proofs and computation, computable analysis, challenges in complexity, foundations of programming, mathematical models of computers and hypercomputers and Gödel's centenary: Gödel's legacy for computability. *Johan van Benthem on Logic and Information Dynamics* Alexandru Baltag, Sonja Smets, 2014-08-27. This book illustrates the program of Logical Information Dynamics. Rational agents exploit the information available in the world in delicate ways, adopt a wide range of epistemic attitudes and in that process constantly change the world itself. Logical Information Dynamics is about logical systems putting such activities at center stage, focusing on the events by which we acquire information and change attitudes. Its contributions show many current logics of information and change at work often in multi-agent settings where social behavior is essential and often stressing Johan van Benthem's pioneering work in establishing this program. However, this is not a Festschrift but a rich tapestry for a field with a wealth of strands of its own. The reader will see the state of the art in such topics as information update, belief change, preference learning over time and strategic interaction in games. Moreover, no tight boundary has been enforced and some chapters add more general mathematical or philosophical foundations or links

to current trends in computer science The theme of this book lies at the interface of many disciplines Logic is the main methodology but the various chapters cross easily between mathematics computer science philosophy linguistics cognitive and social sciences while also ranging from pure theory to empirical work Accordingly the authors of this book represent a wide variety of original thinkers from different research communities And their interconnected themes challenge at the same time how we think of logic philosophy and computation Thus very much in line with van Benthem s work over many decades the volume shows how all these disciplines form a natural unity in the perspective of dynamic logicians broadly conceived exploring their new themes today And at the same time in doing so it offers a broader conception of logic with a certain grandeur moving its horizons beyond the traditional study of consequence relations

**Logic, Rationality, and Interaction** Hans van Ditmarsch,Jerome Lang,Shier Ju,2011-10-07 Edited in collaboration with FoLLI the Association of Logic Language and Information this book constitutes the refereed proceedings of the Third International Workshop on Logic Rationality and Interaction LORI 2011 held in Guangzhou China in October 2011 The 25 revised full papers presented together with 12 posters were carefully reviewed and selected from 52 submissions Among the topics covered are semantic models for knowledge for belief and for uncertainty dynamic logics of knowledge information flow and action logical analysis of the structure of games belief revision belief merging logics and preferences compact preference representation logics of intentions plans and goals logics of probability and uncertainty logical approaches to decision making and planning argument systems and their role in interaction norms normative interaction and normative multiagent systems and logical and computational approaches to social choice

**The Life and Work of Leon Henkin** María Manzano,Ildikó Sain,Enrique Alonso,2014-10-23 This is a comprehensive book on the life and works of Leon Henkin 1921 2006 an extraordinary scientist and excellent teacher whose writings became influential right from the beginning of his career with his doctoral thesis on The completeness of formal systems under the direction of Alonzo Church Upon the invitation of Alfred Tarski Henkin joined the Group in Logic and the Methodology of Science in the Department of Mathematics at the University of California Berkeley in 1953 He stayed with the group until his retirement in 1991 This edited volume includes both foundational material and a logic perspective Algebraic logic model theory type theory completeness theorems philosophical and foundational studies are among the topics covered as well as mathematical education The work discusses Henkin s intellectual development his relation to his predecessors and contemporaries and his impact on the recent development of mathematical logic It offers a valuable reference work for researchers and students in the fields of philosophy mathematics and computer science

**Studies in Logic** Madhabendra Nath Mitra,Mihir Kumar Chakraborty,Sundar Sarukkai,2023-05-11 Ten essays of this book two of which are written in Sanskrit range from modern logic to classical Indian theories of inference Classical Indian philosophy comprising Pracina and Navya Nyaya Sankhya Buddhist and Jaina logical and philosophical standpoints are discussed in most modern technical terms of western philosophy often with the aid of

terminologies of modern logic Similarly western ideas propounded by the ancient Greek philosophers like Aristotle as well as contemporary philosophers such as Frege Russell Srawson Kripke and many others are placed against the backdrop of classical Indian philosophy The book will be immensely useful to those interested in stimulating meaningful dialogues between philosophical thinkings of India and the West The book will also be of interest to those who aim at broadening the horizon of logic and philosophy
