The explosion of data arising from rapid advances in communication sensing and computational power has concentrated research effort on more advanced techniques for the representation processing analysis and interpretation of data sets In view of these exciting developments the program OC Mathematics and Computation in Imaging Science and Information ProcessingOCO was held at the Institute for Mathematical Sciences National University of Singapore from July to December 2003 and in August 2004 to promote and facilitate multidisciplinary research in the area As part of the program a series of tutorial lectures were conducted by international experts on a wide variety of topics in mathematical image signal and information processing This compiled volume contains survey articles by the tutorial speakers all specialists in their respective areas They collectively provide graduate students and researchers new to the field a unique and valuable introduction to a range of important topics at the frontiers of current research

Principles of Imprecise-Information Processing Shiyu Lian, 2024-11-02 This book reveals the origin of imprecise information and establishes the mathematical models of flexible words and related mathematical and logical theories It presents a set of models and algorithms of reasoning and computation thus building a platform for related applications and laying a foundation for further research Applying the theories and technologies in the book builds flexible AI systems to solve corresponding clustering classification judging recognition control prediction regression etc problems and to enhance the Agent s and Robot s abilities to perceive environment and control behavior Combine large language models LLMs with flexible linguistic information technologies in the book to enhance and extend the capability of natural language processing and to realize understanding and generation of flexible words This book differentiates imprecision from the uncertainty of information and explicitly treats imprecise information processing as an independent subject Imprecise information processing is an indispensable research topic and branch field of artificial intelligence With a new perspective and idea the book starts from the origin of imprecise information comprehensively and systematically expounds the principles methods and applications of imprecise information processing and establishes a new theoretical and technological system different from fuzzy technology on flexible linguistic information The audience of this book includes scholars

Research in Education ,1971 Barrelled Locally Convex Spaces P. Pérez Carreras,J. Bonet,1987-03-01 This book is a systematic treatment of barrelled spaces and of structures in which barrelledness conditions are significant It is a fairly self contained study of the structural theory of those spaces concentrating on the basic phenomena in the theory and presenting a variety of functional analytic techniques Beginning with some basic and important results in different branches of Analysis the volume deals with Baire spaces presents a variety of techniques and gives the necessary definitions exploring conditions on discs to ensure that they are absorbed by the barrels of the space The abstract theory of barrelled spaces is then presented as well as local completeness and its applications to the inheritance of the Mackey topology to subspaces Further discussed is the abstract study of bornological and ultrabornological spaces B and B_r completeness inductive limits strong barrelledness conditions characterizations of barrelled bornological and DF spaces in the context of spaces of type $C(X)$ the stability of barrelledness conditions of topological tensor products and the related questions of commutability of inductive limits and tensor products and the holomorphically significant properties of locally convex spaces as developed by Nachbin and others
