## Содержательные основы подготовки будущего учителя математики к формированию математической грамотности учащихся основной школы

Бычков А. В.

**Аннотация.** Цель исследования – выявить содержание математической грамотности учащихся для определения содержательных основ методической подготовки будущего учителя математики. В статье рассмотрено понятие математической грамотности в контексте формирования функциональной грамотности учащихся основной школы. Проведен анализ структуры математической грамотности и исследований, посвященных вопросам формирования содержания отдельных ее компонентов. Показано, что в отечественных исследованиях не сложилось единого подхода к определению набора действий, которым необходимо обучать школьников при выполнении ими этапа формализации ситуации, представленной на естественном языке, и интерпретации полученного результата при решении практико-ориентированных задач. На основе анализа инструментария международного исследования PISA и работ отечественных исследователей составлен перечень действий, целенаправленное обучение которым позволит подготовить будущего учителя математики к формированию у учащихся умений по построению математической модели и интерпретации полученных результатов в процессе решения практико-ориентированных задач. Научная новизна исследования заключается в обосновании необходимости включения в содержание методической подготовки будущего учителя математики специальных действий, лежащих в основе этапов формализации ситуации, представленной на естественном языке, и интерпретации полученных результатов в ходе решения практико-ориентированных задач, с целью формирования математической грамотности учащихся. В результате показана связь между некоторыми специфическими действиями, необходимыми для осуществления этапа формализации ситуации, представленной на естественном языке, и коммуникативными, учебными и информационными умениями, определяющими функциональную грамотность учащихся основной школы.

## Substantive Foundations of Future Mathematics Teachers' Training for Mathematical Literacy Formation in Primary School Students

Bychkov A. V.

**Abstract.** The study aims to identify the content of students' mathematical literacy in order to determine the substantive foundations of future mathematics teachers' methodological training. The paper considers the notion of mathematical literacy in the context of functional literacy formation in primary school students. The author analyses the structure of mathematical literacy and research papers addressing the formation of the content of its individual components. The work shows that in Russian studies, there is no unified approach to determining the set of actions that need to be taught to schoolchildren when they operate at the stage of formalisation of a situation presented in a natural language and interpretation of the result obtained in the process of solving practice-oriented tasks. Having analysed the toolkit of the international PISA study and papers by Russian researchers, the author has compiled a list of actions targeted training of which will prepare future mathematics teachers for the formation of students' skills in building a mathematical model and interpreting the results obtained in the process of solving practice-oriented tasks. Scientific novelty of the study lies in providing rationale for the need to include in the content of future mathematics teachers' methodological training special actions underlying the stages of formalisation of a situation presented in a natural language and interpretation of the results obtained in the course of solving practice-oriented tasks with the purpose of forming students' mathematical literacy. As a result, the relationship between certain specific actions necessary for the implementation of the stage of formalisation of a situation presented in a natural language and communicative, educational and informational skills that determine primary school students' functional literacy has been shown.

*Foundations for the Future in Mathematics Education* Richard A. Lesh, Eric Hamilton, James J. Kaput, 2020-10-07 The central question addressed in *Foundations for the Future in Mathematics Education* is this What kind of understandings and abilities should be emphasized to decrease mismatches between the narrow band of mathematical understandings and abilities that are emphasized in mathematics classrooms and tests and those that are needed for success beyond school in the 21st century This is an urgent question In fields ranging from aeronautical engineering to agriculture and from biotechnologies to business administration outside advisors to future oriented university programs increasingly emphasize the fact that beyond school the nature of problem solving activities has changed dramatically during the past twenty years as powerful tools for computation conceptualization and communication have led to fundamental changes in the levels and types of mathematical understandings and abilities that are needed for success in such fields For K 12 students and teachers questions about the changing nature of mathematics and mathematical thinking beyond school might be rephrased to ask If the goal is to create a mathematics curriculum that will be adequate to prepare students for informed citizenship as well as preparing them for career opportunities in learning organizations in knowledge economies in an age of increasing globalization how should traditional conceptions of the 3Rs be extended or reconceived Overall this book suggests that it is not enough to simply make incremental changes in the existing curriculum whose traditions developed out of the needs of industrial societies The authors beyond simply stating conclusions from their research use results from it to describe promising directions for a research agenda related to this question The volume is organized in three sections Part I focuses on naturalistic observations aimed at clarifying what kind of mathematical thinking people really do when they are engaged in real life problem solving or decision making situations beyond school Part II shifts attention toward changes that have occurred in kinds of elementary but powerful mathematical concepts topics and tools that have evolved recently and that could replace past notions of basics by providing new foundations for the future This section also initiates discussions about what it means to understand the preceding ideas and abilities Part III extends these discussions about meaning and understanding and emphasizes teaching experiments aimed at investigating how instructional activities can be designed to facilitate the development of the preceding ideas and abilities *Foundations for the Future in Mathematics Education* is an essential reference for researchers curriculum developers assessment experts and teacher educators across the fields of mathematics and science education
