temporal constraint networks they are closely related Not only do they share a similar graphical representation they also have in common a notion of constraints in the timed succession of events However chronicles are definitely oriented towards fairly specific tasks in handling temporal data by making explicit certain aspects of temporal data such as repetitions of an event The notion of chronicle has been applied both for situation recognition and temporal sequence abstraction The first challenge benefits from the simple but expressive formalism to specify temporal behavior to match in a temporal sequence The second challenge aims to abstract a collection of sequences by chronicles with the objective to extract characteristic behaviors This book targets researchers and students in computer science from logic to data science Engineers who would like to develop algorithms based on temporal models will also find this book useful *New Meanings for Marketing in a New Millennium* Melissa Moore, Robert S.
