 Primary Mathematics Education at University College Plymouth Marjon UK Reconceptualizing Early Mathematics  
Learning Lyn D. English, Joanne T. Mulligan, 2013-05-09 This book emanated primarily from concerns that the mathematical  
 capabilities of young children continue to receive inadequate attention in both the research and instructional arenas  
 Research over many years has revealed that young children have sophisticated mathematical minds and a natural eagerness  
 to engage in a range of mathematical activities As the chapters in this book attest current research is showing that young  
 children are developing complex mathematical knowledge and abstract reasoning a good deal earlier than previously thought  
 A range of studies in prior to school and early school settings indicate that young learners do possess cognitive capacities  
 which with appropriately designed and implemented learning experiences can enable forms of reasoning not typically seen in  
 the early years Although there is a large and coherent body of research on individual content domains such as counting and  
 arithmetic there have been remarkably few studies that have attempted to describe characteristics of structural development  
 in young students mathematics Collectively the chapters highlight the importance of providing more exciting relevant and  
 challenging 21st century mathematics learning for our young students The chapters provide a broad scope in their topics and  
 approaches to advancing young children s mathematical learning They incorporate studies that highlight the importance of  
 pattern and structure across the curriculum studies that target particular content such as statistics early algebra and  
 beginning number and studies that consider how technology and other tools can facilitate early mathematical development  
 Reconceptualising the professional learning of teachers in promoting young children s mathematics including a consideration  
 of the role of play is also addressed **Teaching Mathematics Using ICT** Adrian James Oldknow, Ron Taylor, 2003-01-01  
 What Information and Communications Technology ICT resources both hardware and software are available for math teachers  
 How can they be used to extend and enrich students learning across the math curriculum How can teachers incorporate ICT  
 effectively into their lesson and course planning Why should math teachers incorporate ICT into their teaching What  
 developments are likely in the future **Learning to Teach in the Secondary School** Susan Capel, Marilyn  
 Leask, 2003-09-02 Designed to support student secondary school teachers through the school based element of their initial  
 training courses this new edition of a best selling text includes reworked tasks for individual use and revised sections on

growth and development moral development and values special educational needs and assessment There is also a new chapter on ICT Units include the student teacher s role planning lessons and schemes of work motivating pupils teaching and learning styles assessment and recording working as part of a team With general updating throughout in the light of developments in legislation the book will continue to be the standard for secondary teachers in training
