## Mathematics And Logo:

*Windows on Mathematical Meanings* Richard Noss, Celia Hoyles, 2012-12-06 This book is the culmination of some ten years theoretical and empirical investigation Throughout this period we have come into contact with many who have stimulated our thinking some of whom belong to the community of Mathematics Educators Our membership of that community has challenged us to make sense of some deep issues related to mathematical learning especially the cognitive and pedagogical faces of mathematical meaning making Alongside this community we are privileged to have been part of another whose members are centrally concerned both with mathematics and education Yet many of them might reject the label of Mathematics Educators This community has historically been clustered around what is now called the Epistemology and Learning Group at the Massachusetts Institute of Technology Their work has focused our attention on cognitive science ethnography sociology artificial intelligence and other related disciplines Crucially it has forced our awareness of the construction of computational settings as a crucial component of the struggle to understand how mathematical learning happens We have sometimes felt that few have tried to span both communities Indeed an analysis of the references in the literature would we are sure reveal that the two communities have often ignored each other's strengths One reason for writing this book is born of our hope that we might draw together Mathematics Educators and mathematics educators and assist both communities in recognising that there are insights that might be derived from each other The LOGO Language Wallace Feurzeig, George Lukas, Joan Lukas, 1977 Presents a LOGO Based Curriculum for Teaching Functions Equations Logic Shows Teachers the Mathematical Pedagogic Possibilities Inherent in LOGO **Volume 1: Research Syntheses** M. Kathleen Heid, Glendon W. Blume, 2008-07-01 According to NCTM's Principles and Standards for School mathematics Technology is essential in teaching and learning of mathematics it influences the mathematics that is taught and it enhances students learning How does research inform this clarion call for technology in mathematics teaching and learning In response to the need to craft appropriate roles for technology in school mathematics new technological approaches have been applied to the teaching and learning of mathematics and these approaches have been examined by researchers world wide The first volume provides insight into what research suggests about the nature of mathematics learning in technological environments Included in this volume are syntheses of research on technology in the learning of rational number algebra elementary and secondary geometry mathematical modeling and calculus Additional chapters synthesize research on technology in the practice of teaching and on equity issues in the use of technology in mathematics instruction Instead of simply reporting achievement scores of students who use technology in their learning authors provide thoughtful analyses of bodies of research with the goal of understanding the ways in which technology affects what and how students learn Each of the chapters in this volume is written by a team of experts whose own research has provided important guidance to the field **Intelligent Learning Environments: The Case of Geometry** Jean-Marie

Laborde,2012-12-06 This book is a thoroughly revised result updated to mid 1995 of the NATO Advanced Research Workshop on Intelligent Learning Environments the case of geometry held in Grenoble France November 13 16 1989 The main aim of the workshop was to foster exchanges among researchers who were concerned with the design of intelligent learning environments for geometry The problem of student modelling was chosen as a central theme of the workshop insofar as geometry cannot be reduced to procedural knowledge and because the significance of its complexity makes it of interest for intelligent tutoring system ITS development The workshop centred around the following themes modelling the knowledge domain modelling student knowledge design ing didactic interaction and learner control This book contains revised versions of the papers presented at the workshop All of the chapters that follow have been written by participants at the workshop Each formed the basis for a scheduled presentation and discussion Many are suggestive of research directions that will be carried out in the future There are four main issues running through the papers presented in this book knowledge about geometry is not knowledge about the real world and materialization of geometrical objects implies a reification of geometry which is amplified in the case of its implementation in a computer since objects can be manipulated directly and relations are the results of actions Laborde Schumann This aspect is well exemplified by research projects focusing on the design of geometric microworlds Guin Laborde     Selected Regular Lectures from the 12th International Congress on Mathematical Education Sung Je Cho,2015-07-16 This book comprises the full selected Regular Lectures from the Proceedings of the 12th International Congress on Mathematical Education ICME 12 which was held at COEX in Seoul Korea from July 8th to 15th 2012 ICME 12 brought together 4700 experts from 100 countries working to understand all of the intellectual and attitudinal challenges in the subject of mathematics education as a multidisciplinary research and practice These selected Regular Lectures present the work of fifty one prominent mathematics educators from all over the globe The Lectures cover a wide spectrum of topics themes and issues and aim to give direction to future research towards educational improvement in the teaching and learning of mathematics education This book is of particular interest to researchers teachers and curriculum developers in mathematics education     Learning Mathematics and Logo Celia Hoyles,Richard Noss,1992 These original essays summarize a decade of fruitful research and curriculum development using the LISP derived language Logo They discuss a range of issues in the areas of curriculum learning and mathematics illustrating the ways in which Logo continues to provide a rich learning environment one that allows pupil autonomy within challenging mathematical settings Essays in the first section discuss the link between Logo and the school mathematics curriculum focusing on the ways in which pupils Logo activities relate to and are influenced by the ideas they encounter in the context of school algebra and geometry In the second section the contributions take up pedagogical styles and strategies They tackle such cognitive and metacognitive questions as What range of learning styles can the Logo setting accommodate How can teachers make sense of pupils preferred strategies And how can teachers help students to reflect on the strategies they are using Returning to the

mathematical structures essays in the third section consider a variety of mathematical ideas drawing connections between mathematics and computing and showing the ways in which constructing Logo programs helps or does not help to illuminate the underlying mathematics *Learning Mathematics* Anthony Orton, 2004-12-30 Why do some students achieve more than others Do we have to wait until pupils are ready Can children discover math for themselves Does language interfere with the learning of math This classic text written from the viewpoint of the math teacher provides answers to these and many more questions Each chapter explores a particular issue that illustrates the interaction between theory and practice New chapters have been included on cognition pattern and ICT **Mathematics Education and Culture** Alan Bishop, 2013-04-17

Reasoning, Communication and Connections in Mathematics Berinderjeet Kaur, Tin Lam Toh, 2012 This fourth volume in the series of yearbooks by the Association of Mathematics Educators in Singapore entitled Reasoning Communication and Connections in Mathematics is unique in that it focuses on a single theme in mathematics education The objective is to encourage teachers and researchers to advance reasoning communication and connections in mathematics classrooms Several renowned international researchers in the field have published their work in this volume The fifteen chapters of the book illustrate evidence based practices that school teachers and researchers can experiment with in their own classrooms to bring about meaningful learning outcomes Three major themes mathematical tasks classroom discourse and connectivity within and beyond mathematics shape the ideas underpinning reasoning communication and connections in these chapters The book makes a significant contribution towards mathematical processes essential for learners of mathematics It is a good resource for mathematics educators and research students *Resources in Education*, 1995 Cases on Inquiry through Instructional Technology in Math and Science Lennex, Lesia, Nettleton, Kimberely Fletcher, 2012-01-31 There exists a wealth of information about inquiry and about science technology engineering and mathematics STEM but current research lacks meaningfully written thoughtful applications of both topics Cases on Inquiry through Instructional Technology in Math and Science represents the work of many authors toward meaningful discourse of inquiry used in STEM teaching This book presents insightful information to teachers and teacher education candidates about using inquiry in the real classroom case studies from which research suggests appropriate uses and tangible direction for creating their own inquiry based STEM activities Sections take the reader logically through the meaning of inquiry in STEM teaching how to use technology in modern classrooms STEM projects which successfully integrate inquiry methodology and inquiry problem solving within STEM classrooms with the aim of creating activities and models useful for real world classrooms Cognitive Models and Intelligent Environments for Learning Programming Enrica Lemut, Benedict DuBoulay, Giuliana Dettori, 2013-11-11 At present there is a general consensus on the nature of learning programming but there are different opinions on what forms an effective environment for it It is generally recognized that the development of a mental model is a formidable task for the student and that learning programming is a complex activity that depends heavily on metacognitive skills This book based on

a NATO workshop presents both pure cognitive models and experimental learning environments and discusses what characteristics can make a learning model effective especially in relation to the learning environment natural or computerized The papers cover cognitive models related to different aspects of programming classes of learners and types of environment and are organized in three groups theoretical and empirical studies on understanding programming environments for learning programming and learning programming in school environments Comprehension design construction testing debugging and verification are recognized as interdependent skills which require complicated analysis and may develop independently and indifferent orders in novices This book shows that there is unlikely to be a single path from novice to expert and that the structure of the final product the program may not constrain the process by which it comes into being as much as some would advocate

### *Social Psychology Matters*

Hollway, Wendy, Lucey, Helen, Phoenix, Ann, 2006-12-01 Social Psychology Matters explores the significance of social

psychology in the twenty first century and the important contribution it can and does make to understanding ourselves and others in today s world This book is designed to help the reader navigate the complex and ever changing nature of the discipline and gain an overview of the key concepts methods and theories The authors adopt a broad approach to trace the roots and legacies of social psychology with a keen eye to the future Each chapter provides an in depth look at a social psychological topic of significance ranging from self and conflict to families and embodiment Four theoretical perspectives cognitive social discursive psychological phenomenological and social psychoanalytic enable students to critically analyse social psychological research These perspectives are interpreted through the interrogative themes of Individual society dualism Agency structure dualism Situated knowledges Power relations This stimulating and accessible text uses real life experience to demonstrate why social psychology matters and how our understanding of these topics can be continually enhanced and constructively applied

**Eight Habits of Highly Effective Math Students (and the Teachers Who Teach Them)** Sue Chapman,Holly Burwell,Mary Mitchell,2025-03-20 Essential habits to build mathematical confidence and competence for all students It has been said that teachers make approximately 1 500 decisions a day Given the volume of work it is no wonder that these decisions are frequently made reflex like and in the moment By intentionally nurturing effective habits in students as well as in teachers we can make these decisions more deliberately and in so doing foster a positive relationship with mathematics that will set students on an unstoppable trajectory of math learning Eight Habits of Highly Effective Math Students and the Teachers Who Teach Them focuses on developing eight essential habits that support mathematical competence and confidence in students This resource is designed as a personalized practice based professional learning experience leading you through a wealth of professional learning and application activities to support you in growing a specific math habit in your classroom to strengthen your students math learning and build your own efficacy The book offers the chance to choose your own adventure through three teacher inquiry options focused on a specific math habit Give it a Go An Informal Exploration of a Teaching Action and Its Impact on Student Learning Classroom Inquiry A Classroom Based Teacher Inquiry Project Focus on Equity A Teacher Inquiry to Notice and Disrupt Patterns of Inequity This book provides an actionable framework for improving math teaching and learning by Emphasizing a commitment to equity because all students are capable of learning high level mathematics when provided with access to high quality instruction Helping teachers develop mindsets and habits to consciously reflect on their instructional practice to continually strengthen teaching effectiveness and student learning outcomes Curating short readings and practice based professional learning activities that can be engaged in individually or collaboratively Highlighting the importance of celebrating growth and the role of teachers in nurturing good habits in their students Offering a guide to coaching the habit through a process called Notice Nurture Name and Nudge Eight Habits of Highly Effective Math Students and the Teachers Who Teach Them is grounded in the unwavering belief that all students are math capable and all teachers can effectively teach mathematics The

book can be used individually by elementary school teachers and education leaders at school and district levels or in collaborative professional learning settings It is an excellent companion to Holly Burwell and Sue Chapman's book *Power Up Your Math Community* Corwin 2024

*Computers and Exploratory Learning* Andrea A. DiSessa, Celia Hoyles, Richard Noss, 2012-12-06 Computers are playing a fundamental role in enhancing exploratory learning techniques in education This volume in the NATO Special Programme on Advanced Educational Technology covers the state of the art in the design and use of computer systems for exploratory learning Contributed chapters treat principles theory practice and examples of some of the best contemporary computer based learning environments Logo Boxer Microworlds Cabri G om tre Star Logo Table Top Geomland spreadsheets Function Machines and others Emphasis is on mathematics and science education Synthetic chapters provide an overview of the current scene in computers and exploratory learning and analyses from the perspectives of epistemology learning and socio cultural studies

**Maths and ICT in the Primary School** Richard English, 2013-05-24 By clearly outlining how ICT can enhance and improve children's learning this book shows how to unleash the full potential of ICT within the classroom Stimulating useful and free of jargon the book provides many practical examples to show teachers where when and how ICT can be used effectively within their maths teaching It provides advice on teaching creatively choosing ICT resources differentiation assessing ICT making the most of adult support Rooted in the practical realities of the classroom this book will support both trainee and qualified teachers in providing rich and creative maths experiences through the use of ICT

**Advanced Educational Technologies for Mathematics and Science** David L. Ferguson, 2013-04-17 This book is the outgrowth of a NATO Advanced Research Workshop held in Milton Keynes United Kingdom in the summer of 1990 The workshop brought together about 30 world leaders in the use of advanced technologies in the teaching of mathematics and science Many of these participants commented that the workshop was one of the more productive and exciting workshops that they had attended It was not uncommon to see participants engaged in informal discussion far into the evenings and early mornings long after formal sessions had ended It is my hope that this book captures the substance and excitement of many of the ideas that were presented at the workshop Indeed the process by which this book has come about has given every opportunity for the best thinking to get reflected here Participants wrote papers prior to the workshop After the workshop participants revised the papers at least once In a few instances three versions of papers were written Some participants could not resist the urge to incorporate descriptions of some of the newer developments in their projects The papers in this book demonstrate how technology is impacting our view of what should be taught what can be taught and how we should go about teaching in the various disciplines As such they offer great insight into the central issues of teaching and learning in a wide range of disciplines and across many grade levels ranging from elementary school through undergraduate college education
