Basic Math for Social Scientists Timothy M. Hagle, 1995 Taking an informal approach Hagle presents a review of the basic mathematical concepts that underlie most quantitative analysis in the social sciences After an algebra review featuring sets and combinations Hagle discusses limits and continuity Calculus is presented next with an introduction to differential calculus Multivariate functions partial derivatives and integral calculus are discussed the author concludes with a discussion of matrix algebra Aimed at readers who have taken one or two courses in algebra this volume is packed with helpful definitions equations and examples as well as alternative notations A useful appendix of common math symbol and Greek letters is also included Learn more about The Little Green Book QASS Series Qualitative Mathematics for the Social Sciences Lee Rudolph, 2013-01-03 In this book Lee Rudolph brings together international contributors who combine psychological and mathematical perspectives to analyse how qualitative mathematics can be used to create models of social and psychological processes Bridging the gap between the fields with an imaginative and stimulating collection of contributed chapters the volume updates the current research on the subject which until now has been rather limited focussing largely on the use of statistics Qualitative Mathematics for the Social Sciences contains a variety of useful illustrative figures introducing readers from the social sciences to the rich contribution that modern mathematics has made to our knowledge of logic structures and dynamic systems A beguiling array of conceptual systems topological models and fractals are discussed which transcend the application of statistics and bring a fresh perspective to the study of social representations The wide selection of qualitative mathematical methodologies discussed in this volume will be hugely valuable to higher level undergraduate and postgraduate students of psychology sociology and mathematics It will also be useful for researchers academics and professionals from the social sciences who want a firmer grasp on the use of qualitative

 VENKATARAMAN, GEETHA.),Amber Habib,Geetha Venkataraman,2024-07-16 This book helps readers bridge the gap
 between school level mathematical skills and the quantitative and analytical skills required at the professional level It
 presents basic mathematical concepts in an everyday context enabling readers to pick up skills with ease Mathematics for
 Social Scientists Focuses on building foundational skills in reasoning data analysis and quantitative methods that are a
 requisite for progressing to higher levels Helps readers express mathematical ideas in the form of sets analyse arguments
 and their validity mathematically interpret and handle data and understand the concept and use of probability Includes a
 dedicated chapter on symmetry perspective and art to encourage readers to reason model and objectively evaluate everyday
 situations The volume will be useful to students of various disciplines in Social Sciences and Liberal Arts It will also be an

Mathematics for Social Sciences and Arts Mahouton Norbert Hounkonnou,Dragana Martinovic,Melanija Mitrović,Philippa
 Pattison,2024 This book addresses interconnections between contemporary advances in mathematics especially algebra with
 applications in the social sciences and the arts It promotes the idea that knowledge cannot remain in disciplinary silos rather
 it belongs to all people and is dedicated to associative relationships in a variety of mathematics applications from sociology to
 linguistics including anthropology semiotics education and cognitive science Contributions illuminate some of the ways in
 which algebra is developed learned understood communicated and applied in the social sciences and the humanities The
 content in this book has its origins in a conference Mathematics for Social Sciences and Arts Algebraic Modelling virtually
 hosted by the Faculty of Mechanical Engineering University of Ni Serbia from the 24th to the 26th of May 2021 This
 conference brought together scholars from various disciplines and geographic regions and focused on the juxtaposition of
 algebra and social science applications The conference organizers higher education institutes from four different continents
 invited leading scientists in social sciences and algebra to contribute to this volume The first part of this book addresses
 algebraic and mathematical thinking specifically learning and practicing mathematics from a cognitive science perspective as
 well as illustrative applications to distinctly human concerns like education and semiotics The second part focuses on

algebraic semigroups and some of their generalizations This book and the conference that engendered it provide an example of a fruitful collaboration in which the skills and deep knowledge of algebraic structures modeling social sciences and arts brought in by the authors from different countries and continents merge in harmonious ways These expositions are a rich resource and are of interest both to mathematicians and non mathematicians Mathematics for Psychologists Social Science Research Council.
