Math Makers: The Lives and Works of 50 Famous Mathematicians Alfred S. Posamentier, Christian Spreitzer, 2024-11-20 Discover the captivating stories behind the greatest minds in mathematics Mathematics today is the fruit of centuries of brilliant insights by men and women whose personalities and life experiences were often as extraordinary as their mathematical achievements This entertaining history of mathematics chronicles those achievements through 50 short biographies that bring these great thinkers to life while making their contributions understandable to the masses Among the fascinating characters profiled are Isaac Newton 1642 1727 the founder of classical physics and infinitesimal calculus he frequently quarrelled with fellow scientists and was obsessed with alchemy and arcane Bible interpretation Sophie Germain 1776 1831 who studied secretly at the cole Polytechnique in Paris using the name of a previously enrolled male student she is remembered for her work on Fermat s Last Theorem and on elasticity theory and Srinivasa Ramanujan 1887 1920 who came from humble origins in India and had almost no formal

training yet made substantial contributions to mathematical analysis number theory infinite series and continued fractions The unusual behavior and life circumstances of these and many other intriguing personalities make for fascinating reading and a highly enjoyable introduction to mathematics

The Early Mathematics of Leonhard Euler C. Edward Sandifer, 2007-03-15 Describes Euler's early mathematical works the 50 mathematical articles he wrote before he left St Petersburg in 1741 to join the Academy of Frederick the Great in Berlin These works contain some of Euler's greatest mathematics the Konigsburg bridge problem his solution to the Basel problem his first proof of the Euler Fermat theorem Also presented are important results that we seldom realize are due to Euler that mixed partial derivatives are equal our f_x notation and the integrating factor in differential equations The book is a portrait of the world's most exciting mathematics between 1725 and 1741 rich in technical detail woven with connections within Euler's work and with the work of other mathematicians in other times and places laced with historical context
