Kam Story, The: A Friendly Introduction To The Content, History, And Significance Of Classical Kolmogorov-arnold-moser Theory H Scott Dumas, 2014-02-28 This is a semi popular mathematics book aimed at a broad readership of mathematically literate scientists especially mathematicians and physicists who are not experts in classical mechanics or KAM theory and scientific minded readers Parts of the book should also appeal to less mathematically trained readers with an interest in the history or philosophy of science The scope of the book is broad it not only describes KAM theory in some detail but also presents its historical context thus showing why it was a breakthrough Also discussed are applications of KAM theory especially to celestial mechanics and statistical mechanics and the parts of mathematics and physics in which KAM theory resides dynamical systems classical mechanics and Hamiltonian perturbation theory Although a number of sources on KAM theory are now available for experts this book attempts to fill a long standing gap at a more descriptive level It stands out very clearly from existing publications on KAM theory because it leads the reader through an accessible account of the theory and places it in its proper context in mathematics physics and the history of science

Mathematics and the Life Sciences D.E. Matthews, 2013-03-13 For two weeks in August 1975 more than 140 mathematicians and other scientists gathered at the Universite de Sherbrooke The occasion was the 15th Biennial Seminar of the Canadian Mathematical Congress entitled Mathematics and the Life Sciences Participants in this inter disciplinary gathering included researchers and graduate students in mathematics seven different areas of biological science physics chemistry and medical science Geographically those present came from the United States and the United Kingdom as well as from academic departments and government agencies scattered across Canada In choosing this particular interdisciplinary topic the programme committee had two chief objectives These were to promote Canadian research in mathematical problems of the life sciences and to encourage co operation and exchanges between mathematical scientists biologists and

medical researchers To accomplish these objective the committee assembled a stimulating programme of lectures and talks Six principal lecturers each delivered a series of five one hour lectures in which various aspects of the interaction between mathematics and the life sciences were considered In addition researchers working in the areas of health population biology physiology and development biology and disease processes were invited to give more than 25 hours of complementary talks
