Vol-III Dr. T.C. Gupta,2007   **An Excursion through Elementary Mathematics, Volume III** Antonio Caminha Muniz Neto,2018-04-17 This book provides a comprehensive in depth overview of elementary mathematics as explored in Mathematical Olympiads around the world It expands on topics usually encountered in high school and could even be used as preparation for a first semester undergraduate course This third and last volume covers Counting Generating Functions Graph Theory Number Theory Complex Numbers Polynomials and much more As part of a collection the book differs from other publications in this field by not being a mere selection of questions or a set of tips and tricks that applies to specific problems It starts from the most basic theoretical principles without being either too general or too axiomatic Examples and problems are discussed only if they are helpful as applications of the theory Propositions are proved in detail and subsequently applied to Olympic problems or to other problems at the Olympic level The book also explores some of the hardest problems presented at National and International Mathematics Olympiads as well as many essential theorems related to the content An extensive Appendix offering hints on or full solutions for all difficult problems rounds out the book

Topics in Complex Function Theory, Volume 3 Carl Ludwig Siegel,1989-01-18 Develops the higher parts of function theory in a unified presentation Starts with elliptic integrals and functions and uniformization theory continues with automorphic functions and the theory of abelian integrals and ends with the theory of abelian functions and modular functions in several variables The last topic originates with the author and appears here for the first time in book form
