**Mathematical Reasoning** Lyn D. English,2013-04-03 How we reason with mathematical ideas continues to be a fascinating and challenging topic of research particularly with the rapid and diverse developments in the field of cognitive science that have taken place in recent years Because it draws on multiple disciplines including psychology philosophy computer science linguistics and anthropology cognitive science provides rich scope for addressing issues that are at the core of mathematical learning Drawing upon the interdisciplinary nature of cognitive science this book presents a broadened perspective on mathematics and mathematical reasoning It represents a move away from the traditional notion of reasoning as abstract and disembodied to the contemporary view that it is embodied and imaginative From this perspective mathematical reasoning involves reasoning with structures that emerge from our bodily experiences as we interact with the environment these structures extend beyond finitary propositional representations Mathematical reasoning is imaginative in

the sense that it utilizes a number of powerful illuminating devices that structure these concrete experiences and transform them into models for abstract thought. These thinking tools—analogy, metaphor, metonymy, and imagery—play an important role in mathematical reasoning as the chapters in this book demonstrate, yet their potential for enhancing learning in the domain has received little recognition. This book is an attempt to fill this void. Drawing upon backgrounds in mathematics education, educational psychology, philosophy, linguistics, and cognitive science, the chapter authors provide a rich and comprehensive analysis of mathematical reasoning. New and exciting perspectives are presented on the nature of mathematics, e.g., mind-based mathematics, on the array of powerful cognitive tools for reasoning, e.g., analogy and metaphor, and on the different ways these tools can facilitate mathematical reasoning. Examples are drawn from the reasoning of the preschool child to that of the adult learner.

Embrace the diverse spectrum of abilities, interests, and learning styles among students with this powerful series. Each book offers practical, research-based guidance to differentiating instruction in the mathematics classroom. The authors provide dozens of ready-to-use differentiated tasks, including reproducible activities along with ways to scaffold mathematical learning strategies for providing and structuring choice within classrooms, guidance in leading large group discussions when students are completing different activities, and engaging ways to address NCTM's Principles and Standards for School Mathematics and Curriculum Focal Points.

Developing Mathematical Proficiency for Elementary Instruction Yeping Li, Roger E. Howe, W. James Lewis, James J. Madden, 2021-04-23

The need to improve the mathematical proficiency of elementary teachers is well recognized and it has long been of interest to educators and researchers in the U.S. and many other countries. But the specific proficiencies that elementary teachers need and the process of developing and improving them remain only partially conceptualized and not well validated empirically. To improve this situation, national workshops were organized at Texas A M University to generate focused discussions about this important topic with participation of mathematicians, mathematics educators, and teachers. *Developing Mathematical Proficiency for Elementary Instruction* is a collection of articles that grew out of those exciting cross-disciplinary exchanges. *Developing Mathematical Proficiency for Elementary Instruction* is organized to probe the specifics of mathematical proficiency that are important to elementary teachers during two separate but interconnected professional stages: as pre-service teachers in a preparation program and as in-service teachers teaching mathematics in elementary classrooms. From this rich and inspiring collection, readers may better understand and possibly rethink their own practices and research in empowering elementary teachers mathematically and pedagogically as educators or researchers.
